A. BEAUSSÉNAT reported to the Académie de Médecine (*Bulletin*, May 6th, 1915; *Il Morgagni*, March 31st, 1916) the case of a young sergeant operated on for a wound of the heart caused by a projectile which had remained free in the right ventricle, and was extracted four months and a half after the infliction of the wound. The patient was struck on October 1st, 1914, by a fragment of grenade which, passing through the diaphragm, the pericardium, and the whole thickness of the cardiac muscle, penetrated into the right ventricle. It measured one and a half centimetres in length by one and a half in breadth and three millimetres in thickness; it weighed 15 grams. It was extracted on February 17th, 1915. The heart was opened and the projectile was seized, not without difficulty, with forceps and removed. The heart was immediately sutured. In three days intense dyspnoea came on with grave symptoms of collapse. There was moderate fever with slight pulmonary symptoms, which disappeared in a few days. A month after the operation the patient could be regarded as absolutely cured, and at the date of report the heart's action was normal and the cure seemed to be definitive. Two similar cases are, says Beaussehat, on record, one published in 1909 the other in 1910. These showed the prolonged tolerance by the heart in regard to metallic foreign bodies, as in one the patient died after four months and a half, the second after seven months. In these cases, however, no operation was done, and the projectiles were only found at the autopsy. [In the *EPITOME* of January 29th, 1916, par. 36, there is a short account of an unsuccessful attempt to remove a fragment of shell from the right ventricle; and in the number for April 8th there is a report of a case in which a shrapnel bullet was extracted from the same cavity.]

72. Gas Gangrene.

V. MARCONI reports (*Giornale di Medicina Militare*, October, 1915; *Il Morgagni*, April 5th, 1916) seventeen cases of gas gangrene treated in an Italian field hospital. Among them were three cases of comminuted fracture of the femur caused by hand grenade, rifle bullet, and shrapnel. In four other cases, in addition to compound fractures of the bones of limbs, there was injury to blood vessels, which had necessitated the application of the elastic bandage for periods varying from four to six hours; these were also grenade and gunshot wounds. In one case there was a fracture of the tibia by a shrapnel bullet; in another a joint was injured by grenade. In three other cases vessels had been seriously injured by gunshot or shrapnel and had been treated at the dressing station with the elastic bandage, which had been kept on for periods varying from three to eight hours. In the remaining five cases there were lesions of soft tissues by projectiles without damage to bone or vessels. The symptoms were of all degrees of severity, the gravest being in cases of large lacerated wounds with extensive separation of tissue caused by fragments of grenade or shrapnel, which always carried much infective material. The phenomena of gas infection were always most violent in cases in which the elastic bandage had been left on for a long time. On the other hand, in the case of wounds of soft parts, the infection was limited and easily neutralized. The greatest virulence was caused by fragments of grenade; next came shrapnel, which almost always carried into the body all the bits of clothing it might meet. In the case of men who have lived in trenches for months it may readily be conceived that these are not aseptic. Bullet wounds play a large part in the production of infection when there is smashing of bone and shock. The elastic ligature applied for many hours causes a lessened vitality in the tissues, thus facilitating the attack of pathogenic germs, which, on the other hand, with a good supply of blood, by the rapid establishment of collateral circulation, would be overcome. Marconi holds that the surgeon should not wait for attenuation of the process by mild measures. If improvement is not obtained quickly, there should be no hesitation about energetic intervention, because the saving of life or its loss is often a question of a few hours. If the process is limited, the thermo-cautery should be freely applied, together with disinfectants which can penetrate throughout the windings of the wound. In severe wounds, even when important vessels have been injured, it is not necessary always to apply the "fatal haemostatic ligature." Efficient plugging with a compressive bandage is in most cases sufficient. The elastic ligature should be used only in extreme cases and for a short time, never more than two hours, otherwise the patient is in danger of losing his limb by gas gangrene. When the gangrene develops there ought to be no hesitation about amputation.

GIOVANNI TIENGO (*Il Policlinico*, sez. pratica, April 16th, 1916) reports three cases of gas gangrene, two of which were cured, and one died. All the cases presented the characteristic local symptoms—emphysema, yellowish-red discoloration of the skin, fetor and reddish tint of the discharge, necrotic muscular foci, and great pain, with crepitus on palpation. At first this is the only symptom that reveals emphysema, but if no intervention is made within the first two or three days, a great increase in size takes place, which in the limbs is almost uniform and symmetrical, and not partial, such as might be due to a purulent accumulation or to an emphysema of different origin; this extends progressively to the root of the limb or to the abdomen, buttocks, and loins, up to the ribs. Whilst on the abdomen it is not very manifest, it may assume large dimensions on the buttocks and loins. This diversity of development of the emphysema is due to the fact that on the buttocks and loin there are large muscular masses. The formation of gas occurs in the necrotic foci produced in the substance of the muscles, and from these the gas, separating the fibres, escapes, together with liquid products, into the area of the wound, from which they may be seen to issue, sometimes with a gurgling sound. Longitudinal incisions should be made from the wound or above it if the emphysema extends up to the root of the limb and in the gluteal region down to the muscles. Then with the finger or a blunt instrument the muscular fibres or bundles should be separated so as to penetrate into the various foci of gangrene. These should be freely opened, scraped, and irrigated with calcium hypochlorite and drains of gauze or tubes inserted. In this way the progress of the disease is arrested without having recourse to amputation or other disabling operation.

At the Royal Medical Academy of Rome on February 27th, 1916 (*Ibid.*, April 16th, 1916) N. LEOTTA insisted on the importance of the elastic bandage in cases of gas gangrene. But it should not be applied unreasonably, and the surgeon should always be ready to take it off at once if necessary. On the basis of his own experience, Leotta showed that the number of gangrenous foci could be notably reduced by early and free opening up of the wound at the first sign of septic complication. Among the patients brought to his hospital the percentage of gangrene had been less than 1 per cent. When gangrene does occur and is quickly diagnosed, it is always possible to save life and limb by cauterization with the red-hot iron. He recalled how recently Querci had recourse to cauterization with a current of hot air of 600° by means of Gaiffe's apparatus, which acts in a way identical with that of the hot iron. But Querci's results were inferior to those obtained by himself in his field hospital. He had never performed an amputation for gas gangrene and had not lost a single patient attacked by the disease. In nine cases he obtained a cure without amputation. In the discussion DURANTE said that he had long used the red-hot iron for the cure of gas gangrene. The results had always been satisfactory.

Captain L. B. CANE, R.A.M.C., records (*St. Bart's Hospital Reports*, March, 1916) the case of a soldier, aged 22, admitted to H.M.S. *Devanha* on August 29th, 1915, from Suvla Bay with "pyrexia of uncertain origin." On September 22nd he complained of pain in the right forearm, which showed the typical symptoms of gas gangrene, extending to about 2 in. above the elbow-joint. There was no trace of any wound or abrasion. Circular amputation was performed at the level of the insertion of the deltoid, some frothy serum escaping at one point where the involved area was encroached upon. The brachial artery was not blocked. No sutures were applied. The patient died about six hours later. An incision made into the amputated limb liberated much gas and frothy serum, not particularly offensive, and there was no pus. There was no other case of gas gangrene on the *Devanha* at the time, nor did any case develop afterwards.

PATHOLOGY.

73. Gas Bacillus Infection.

FAUNTLEROY (*Annals of Surgery*, January, 1916) points out that the *Bacillus perfringens* is practically always present in the discharges and tissues of all wounds in the present war, and being also present in the soil-stained clothing its access to the wounds is easily understood. A fatal case of gas bacillus infection passes through the stages of injury, infection, localized necrosis, progressive gas production, circu-

latory disturbance, increased virulence, and septicaemia, and it is essential for the growth of the organism that there should be a certain amount of devitalized tissue in the wound, the toxins formed exerting a selective action on the planes of connective tissue, travelling most rapidly along the fascial planes. In the earlier stages there is usually nothing to indicate the gravity of the process, but in from two to five days a small degree of swelling develops, and palpation elicits the presence of gas in the tissues, and some loss of tissue elasticity resembling induration. A slowly progressive copper-coloured mottling of the skin adjacent to the wound follows, and a characteristic fetid odour resembling dead fish becomes noticeable, the discharge being of a thin, sero-sanguineous character, with later the development of crops of vesicles varying from the size of a pea to several inches in diameter. Although in the earlier stages of the infection a pulse may be present in one of the arteries distal to the wound it becomes progressively weaker, and in the last stage is always absent. A rising pulse-rate, usually out of proportion to the degree of fever, is highly suggestive of the first grade of infection in view of the usual febrile response to other wound infections in which the pulse-rate is usually in direct proportion to the degree of fever. Large ragged and deep wounds afford the most ideal condition for rapid infection, especially if important blood vessels and nerves have been injured so as to interfere seriously with nutrition and to produce rapid necrosis. The thoroughness of early surgical intervention is a most important factor in the progress of the infection. Prophylaxis consists in the usual precautions against wound infection, together with special considerations arising from the nature of trench warfare and the ease of infection with the organism responsible for progressive emphysematous necrosis. Covering the floor of the trench with wood faggots, and whitewashing thickly and repeatedly the sides of the trench, are measures suggested, as well as the adoption of a less porous and more easily cleanable material for clothing, and rigid attention to trench hygiene. Abortive treatment presupposes the possibility of being able thoroughly to treat the wound within twelve hours after the receipt of injury, and the prompt and complete removal of all foreign bodies or splinters of bone, under x-ray guidance if possible. In large wounds long fenestrated rubber tubes should be placed in the depth of the wound and its diverticula, and the wound packed with gauze saturated with Dakin's fluid, over which is placed a layer of non-absorbent cotton through which the tubes pass, so that every hour or two the fluid may be injected through them in order to keep the gauze thoroughly saturated. At the end of one or two days, according to the size and character, the wound will be sterilized, and the patient can then be moved to the rear hospital on a moulded splint or plastic dressing. The curative treatment has especially to do with the second grade of the infective process, which is usually treated in the large base hospitals of the interior. While it is considered that Wright's treatment with salt solution may be satisfactory in selected cases the great majority of progressive cases appear to require more radical treatment, such as not only a thorough opening up of the wound, but also the continuous use of an active antiseptic. A few others have advised and reported favourably upon a subcutaneous introduction of oxygen under pressure into the tissues above the wound. In order to prevent or limit skin retraction after operation the following method was devised to pull constantly upon the skin during the period of after-treatment; A wide piece of Canton flannel material is glued on its hairy side to the skin about 2 in. above the wound. Sewn to this are four narrow pieces, 2 in. apart, each having a short piece of narrow webbing attached. This should not be used until three or four days have elapsed after the operation, so that nothing may interfere with the keeping the wound wide open. Narrow strips of rubber cover the raw surface, and over this are placed the wide gauze pads, secured in place by a narrow strip of gauze surrounding the dressings at the end of the stump. The extension straps are now brought over the end of the stump and buckled to corresponding webbing on a cross piece of wood attached to a cord passing over a pulley and secured to a bag weighing 5 to 7 lb. By keeping up such extension for a month, the dressings being renewed daily, the skin usually comes down over the stump sufficiently to allow the apparatus to be dispensed with. When once the septicaemic grade is reached all methods of treatment by serums, etc., are useless, and the only hope is to prevent the onset of this stage by prompt amputation in the latter part of the second grade and before the patient is too weak to stand the shock of the operation.

War Psychiatry.

AT a meeting of the Royal Medical Academy of Genoa ARTURO MORSELLI, consulting neurologist to the First Army of Italy, presented a communication on war psychiatry which he called a new chapter in mental pathology. He excluded from his purview all the common forms of psychosis which the circumstances of warfare had forced from a condition of latency into active development, and those such as alcoholism, epilepsy, and dementia praecox, which had already existed when the patients were mobilized. Dealing only with mental aberrations due directly to the war, he said these mostly occurred in an acute form; they were brought on by the emotional excitement of battle, and, in his experience, had a basis of asthenia. He divided them into seven groups: (1) Acute nervous asthenia, mostly in the form of neurasthenia and psychasthenia; (2) hysteria, of which there were many varieties manifesting themselves in dumbness, stammering, tremor, paralysis, convulsions, catalepsy, or somnambulism; (3) depression, showing itself sometimes as simple sadness, at others as delirium with ideas of suicide; (4) stupor, sometimes simple, sometimes accompanied by catatonic phenomena recalling those of dementia praecox; (5) hallucinations, coming on in a transient form after emotion; (6) confusional states, having the characters of amnesia; (7) in rare cases, maniacal excitement. All forms of war psychosis in the strict sense are, in Morselli's experience, curable within a short period if treated early; it is important, therefore, that the diagnosis should be made at once within the war zone. It is better that a soldier whose mind has been deranged by the conditions of military service should not be sent to a lunatic asylum unless the case proves refractory to early treatment. The author points out the difficulties presented by more or less conscious simulation. It is in dealing with such cases that the experience of the psychiatrist is most useful, as, without special knowledge, mistakes are easily made. Once the doctor has made up his mind that the soldier is shamming, the best plan is to send him back to the fighting line. The results of treatment in the psychiatric stations within the war zone are very satisfactory. In some forms of psychosis the proportion of cures within the first ten days is 60 per cent.

CHAVIGNY (*Paris méd.*, January 1st, 1916) says that soldiers on active service are peculiarly liable, under the strain of the number and variety of the duties imposed upon them, to show mental breakdown by "reactions" which expose them, if their nature is not recognized, to be punished for breaches of discipline. Temporary loss of memory may make a man forget that he is a soldier and leave the trenches, with the result that he is court-martialled; the same thing may happen in cases of deaf-mutism from shock. The reactions of real insanity are shown by desertion, abandonment of post, refusal to obey, breaking of arms and destruction of equipment, burning of buildings, mutiny, and acts of violence. These offences include almost all those which under military law are visited with increased penalties in time of war. Chavigny relates several illustrative cases in which an expert examination saved men from death, and obtained for them a recognition of unfitness for military service. Chavigny insists that simulation is relatively rare, and he strongly urges the doctor, even when a case looks most suspicious, not to allow himself to be carried away by a first impression. He should carefully observe the man, not letting him, or any one about him, know that he is under suspicion. The expert must remember that a mistaken diagnosis of simulation justly exposes him to the severest criticism. But having made up his mind that the case is one of malingering, he should act without hesitation. The author relates a curious case of what he calls super-simulation. A censor of correspondence from the front intercepted a letter from a soldier to his wife, in which he told her not to worry about him when she was informed that he was in hospital, as in order to get away from the firing line, where he ran too much risk, he was shamming deaf-mutism. He instructed her how she was to

answer all questions in case of inquiry, so as to give a convincing history of hereditary and personal antecedents. The man at this time had been under Chavigny's care, and was being treated for typical deaf-mutism caused by shell shock. All the classical symptoms were present—local anaesthesias peculiar to such cases, persistent cough, etc., besides loss of speech and hearing. Examination after cure of the deaf-mute condition showed a very marked state of mental instability. But more typical than this, inquiry of the man's family doctor confirmed the absolute reality of the hereditary and personal history which, in his letter to his wife, he had described as invented to suit the requirements of his case. The wife, on close examination, confessed that her husband was the victim of his imagination, as it often happened that he could not distinguish his own inventions from what he had actually seen. He was, in fact, a mythomaniac, who doubtless in order to give himself some importance had invented a disease from which he really suffered. Ravaut, as the result of a series of puncture experiments in cases of mental disturbance caused by the war, had pointed out the frequent presence either of abundant albumin or blood in the cerebro-spinal fluid in men who for the lack of objective symptoms might have been put down as simulators. Chavigny thinks this may be a useful help in diagnosis, but only if the result is positive. He has seen it negative in cases as to the genuineness of which there could be no doubt. Furrowing of the nails, dating from the appearance of nervous or mental disturbance, may be important in cases of late or retrospective examinations.

75.

Simulated Disease in Soldiers.

EDGARD BLUM and GASTON DIMIER (*Gaz. hebdom. des sciences méd.*, May 21st, 1916) discuss the etiology and treatment of simulation. The determining causes are first, the wish to avoid exposure to new dangers, and secondly, to get a pension. The predisposing causes are often an illness or a wound, or it may be the nervous overstrain after a wound. Occasional causes are found in the organization of the medical staff and in the therapeutic measures employed. Full advantage had not been taken of the services of the neurologists and medical psychologists called to active service; such specialists played an important part in discovering and checking at the beginning any exaggeration by the wounded of their condition. Again, the organization of hospitals left much to be desired. If in the important military centres there were sanitary formations having at their disposal all modern therapeutic agents and a specially skilled staff, in the smaller centres there was often only one civilian doctor and the most rudimentary therapeutic equipment. Simulators had a wholesome dread of the army doctor, but in these centres his visits were made at too long intervals. Infirmarians and lady volunteers were also responsible for much exaggeration by the wounded. Their very devotion tended to encourage morbid sentimentality in the men. Other causes of simulation were excess in medical treatment and the supply of useless prosthetic apparatus. The authors quote the case of a soldier who complained of having received a contusion in the lumbar region which made him unable to stand straight. He had been given a splendid corset worth several hundreds of francs, and professed to be unable to do without it. He was a man of herculean build, and the authors were convinced that he was shamming. They took away his apparatus in spite of his protest, and a week later he walked straight and asked for his discharge. The wearing of the corset had fixed in his mind the idea of incapacity. A number of wounded were led to exaggerate their disability by the very care bestowed upon them, such as wearing a dressing too long or immobilization in plaster-of-Paris. In addition to the interference of the circulation and the stiffness of joints thus caused, the idea of disability became crystallized in the brain of the wounded man. Electricity applied with small batteries, often by persons unskilled in their use, might be another cause of simulation by giving the wounded man the notion that the failure in treatment was due to the gravity of the hurt. The authors agree with Dejerine and Bergonié that if the functional activity

was sooner brought into play; if doctors were less liberal in ordering walking sticks and crutches; if, in short, there was less treatment of a kind tending to fix the attention of the wounded man on his hurt, there would be less exaggeration. "Firing" they think particularly harmful, as the marks left gave a sort of stamp of authenticity to the hurt which helped simulation. Discussion in the presence of the patient of the symptoms and diagnosis, and criticism of what had been done encouraged exaggeration. The authors have often heard men on the strength of these criticisms attribute the aggravation of their state to wrong treatment. They have often known wounded men refuse to submit to examination on the ground that a doctor under whose care they had been had recommended them to avoid any kind of movement under penalty of formidable complications. Medical boards were also responsible for a good deal of simulation. Overworked, and not always taking into account the reports furnished them, they often granted too long leave without sufficient reason. That was an encouragement to the simulator, especially in view of the fact that the truly brave and deserving were rewarded only with the regulation seven days. There were, according to the authors, two classes of simulators. One invented diseases; detection was generally easy. The exaggeration of their disability and the *floriture* with which they described their suffering at once enlightened the experienced physician. Others perpetuated the affection from which they suffered, and instead of getting well in the ordinary time exploited their troubles. This kind of simulation might be conscious or unconscious. Among the unconscious were certain patients with exaggerated emotivity. Some were neurasthenics and naturally exaggerated their hurt. As Duprez says, there are persons who pass rapidly from suggestion to simulation. "The psychopathic process generally follows a course which may be summed up in the following words: Commotion, emotional suggestion, exaggeration, simulation and claim for compensation." A similar evolution is seen in workmen who suffer from accidents. These cases were the easiest to cure. Then there are conscious malingerers who set their wits against the doctor's; with them it was necessary to use coercive measures.

FORGUES (*Caducée*, No. 10, 1915; *Il Morgagni*, April 10th, 1916) gives from his own experience some illustrations of simulation by soldiers. Inflamed glands in the groin may be produced by scratching the foot with a needle steeped in faecal matter. The regular outline of the lesion distinguishes it from an excoriation due to footwear. Sores of the leg may be caused by rubbing the field blanket against the skin at points where the bones are superficial (tibia, knee, malleoli, etc.). At the first visit the lesions look trifling. The next day they are reddened and extended, and if faecal matter is applied they take on an alarming phagedaenic appearance. Purulent conjunctivitis may be produced with a little tobacco juice, a particle of lime, or the juice of some euphorbiaceous plant. The absence of the gonococcus and careful watching will reveal the trick. Mucous patches are imitated by cauterization with a lighted cigarette; the size and form of the patches, which are alike in all cases, should beget suspicion. Haematuria is simulated by the ingestion of a very concentrated decoction of carrot which gives the macroscopic appearances of bloody urine. Haemoptysis can be simulated by a small cut on the tonsils or pillars of the fauces; blood is then brought up by coughing. Tonsillitis is produced by gargles of hot alcohol or petrol or a decoction of euphorbiaceous plants; in these cases the diagnosis of simulation is almost impossible. Malaria may be simulated by means of aloes applied by punctures on the flanks, or better by an infusion of laurel water; simulation cannot be proved except by examination of the blood. The author reports in detail an epidemic of dysentery caused by one of his orderlies with enemas of a saturated solution of alum, followed by the introduction into the anus of pledgets of cotton steeped in the same solution. This is retained, and the progressive irritation thus produced caused bloody diarrhoea with tenesmus perfectly simulating dysentery. He has seen fainting fits produced by enemas of a decoction of tobacco in alcoholized water; and dog bites simulated by forks thrust in opposite directions into the hand or arm, the effect being completed by contusion by striking with a stick. A comparison of the lesions with the soldier's fork, and the fact that the wounds produced by a dog's teeth are unequal in depth, whilst those produced with a fork are all equal, will serve to reveal the fraud.

76.

War Mutism.

At a meeting of the medical society of Parma in November, 1915, L. RONCORONI reported four cases of war mutism (*Il Morgagni*, May 10th, 1916). Two of the patients

had an evident predisposition to mental disease, one of them having attempted suicide some years before, while the other at the age of 16, after seeing an apparition of a woman clothed in white in his room at night, remained three days without being able to utter a word. The affection also occurs in non-combatants; one of the patients was an orderly; and another a chauffeur employed in collecting wounded. Although the condition is known as war mutism, in the author's cases there were other phenomena—sensory and motor, organic and psychic—besides the loss of speech. One man was the subject of automatic motor symptoms with rhythmical movements of the head—flexion, extension, and from side to side—and twisting of the trunk, which lasted four days consecutively. Two had some muscular hypertonia, especially in the lower limbs; in three there was definite diminution in sensitiveness to pain. In one there was exaggeration of reflexes superficial and deep, and immobility of the eyeballs, so that the man seemed to be always staring at one point. There was an arrest of all the higher psychomotor functions. In the first days the patients were motionless, and incapable of reacting to external stimuli, or manifesting a spontaneous activity except in regard to taking food and emptying the rectum and bladder. In most cases sleep was not disturbed. The power of writing was always recovered before that of speech. In three cases the more important symptoms disappeared after three to ten days, and in a fortnight or three weeks cure was complete, except in the case of the man who had previously attempted suicide. In him the psychic disturbance was prolonged for a couple of months, and he left the hospital before recovery was complete; in his case, however, the condition was not so much a psychomotor arrest caused by the war as a common paraphrenic form of mutism. In all the cases there was some loss of hearing, although examination of the ears gave negative results. This was attributed to a disturbance of perception of sound which ceased with the return to normal psychical conditions. In all the cases there was loss of memory, which lasted some days. Roncoroni holds strongly that war mutism is not hysterical in nature.

77.

War and Skin Disease.

MILIAN, chief of the dermato-syphiligraphic service of the French armies (*Paris méd.*, May 6th, 1916), says that skin diseases among soldiers on active service present a number of variations from the ordinary types seen in time of peace. Before the war the most common affections in the Paris skin clinics were eczema, itch, psoriasis, and tuberculosis, lupoid or warty. To-day eczema and tuberculides are relatively rare, but itch, which was also rare, has lately shown an increase corresponding to that of syphilis; this is explained by the fact that it is generally contracted by sexual intercourse. On the other hand, phthiriasis, ecthyma, and trichophytosis are common, but present some special features. Impetigo of the face and non-parasitic scycosis, particularly of the subnasal variety, are often met with. Milian attributes the infrequency of tuberculosis to the vigilance of recruiting officers in looking for the morbid condition, and to the open-air life and good feeding of the men at the front. Alopecia areata, generally common among French soldiers, has so far been little in evidence since the beginning of the war, possibly because men suffering from the affection have not been sent to hospital. The few cases seen by Milian seemed to have no connexion with emotional shock. Phthiriasis occurs in a very acute form, the whole body being invaded; the skin is covered with small oedematous papules of the size of a pin's head. The excoriated papules with small brown crusts of ordinary pediculosis and the dark discoloration characteristic of the chronic form are exceptional. This is due to prompt treatment of the condition. Milian points out that the oedematous papules have a seat of predilection not mentioned in textbooks; that is the region just below the posterior border of the axilla where the sleeve of the vest touches it. Itch lesions, on the other hand, are seen on the front of the axilla. The phthiriasis of war is almost always complicated by ecthyma of the lower limbs caused by scratching. Sometimes the lesions are in the form of straight lines as broad as the finger and several centimetres in length; they are seen in groups of two, three, or more on the front of the thigh and the outer part of the leg. They are bright red in colour, and are absolutely identical in appearance with the wounds left after the removal of strips of skin for grafting by Thiersch's method. So closely do they resemble artificial lesions that Milian at first sight was inclined to believe that they were voluntary mutilations. But their arrangement in parallel lines, their situation within reach of the hands, their direction and breadth, convinced him

that they were infected scratches. These lesions usually get well quickly under wet antiseptic dressings. A more severe form complicating phthiriasis in worn-out and dirty men is characterized by large and deep ulcers left by the separation of black eschars, which heal very slowly. The treatment is careful cleansing of the limb, painting with tincture of iodine and pure oxygenated water, and dressing with picric acid, 1 per cent. Milian says that picric acid is an excellent remedy for pyodermitis, but unfortunately its use is forbidden in military hospitals, as by taking it internally soldiers have been able to simulate jaundice. Artificial dermatitis has been rare. Milian has seen only three cases, in all of which the lesion was a pustular eruption produced by thapsia juice. Trichophytosis has been unusually frequent; Milian attributes this to the great herds of cattle collected for the feeding of the troops. In the winter of 1914-15 the animals near Verdun were packed close together in stables and barns. This was the cause of an epidemic, in which two animals out of three were attacked and the disease was communicated to the men in charge of them. Last winter it spread among the troops, who caught it from their horses, among whom the disease was very rare.

GAUCHER and Mlle. RENEE KLEIN (Ibid.) say that the influence of emotion and shock in the production of psoriasis is well known. They have been struck by the increase of the disease since the outbreak of the war, and they have especially noted the frequency of its occurrence as a sequel of wounds. Often it developed on the scar. They do not think that this is to be explained by irritation, but rather that the wound is a place of least resistance to attack. An objection to this view is the late development of the disease on scars.

SURGERY.

78. Syphilis in War Time.

AT a meeting of the Paris Académie de Médecine on March 28th (*Paris méd.*, April 8th, and *Journ. de méd. et de chir. prat.*, May 10th, 1916) GAUCHER, chief physician to a number of hospitals of the regional camp of Paris, read a paper on syphilis in war time. His observations had convinced him that in France and in the other belligerent countries syphilis was much more prevalent than before the war. In a total number of 2,295 patients treated in his service at the Saint Louis Hospital from January 1st to July 31st, 1914—that is to say, in the seven months immediately preceding the outbreak of hostilities—there were 276 cases of recent syphilis, or in round numbers 300 in 3,000. From August 14th, 1914, to December 31st, 1915, he admitted to the same service 4,912 patients, civilians and soldiers, of whom 793 were cases of recent syphilis, or in round numbers 800 in 5,000. The prevalence of the disease had therefore increased by nearly one-half since mobilization. The proportion of cases among soldiers and civilians was about equal, and the increase in numbers about the same in both classes. Many more chancres were seen in quite young people and in elderly men, and it would seem that those unfit for military service had, in regard to the contraction of syphilis, taken the place of men on active service. According to Vaillard, general inspector of the sanitary service, the 1935, 1936, and 1937 classes were threatened with contamination from birth. Gaucher, feeling that much of the evil was due to ignorance, organized courses of popular lectures on syphilis and its prevention. His communication led to the appointment of a committee consisting of Landonzy, Gaucher, Balzer, Pierre Marie, Pinard, and Vaillard, to study the best means of dealing with the situation.

79. War Injuries.

C. A. MCWILLIAMS, of New York (*Journ. Amer. Med. Assoc.*, April 8th, 1916) reports a case that is of interest on account of the number of wounds received, the way in which they were treated, and the recovery after numerous plastic operations. The man received the first attention ten hours after the infliction of the wound, and was admitted to hospital after four days. The injuries comprised: (1) Wound at the level of the eleventh rib in the midscapular line. (2) Wound in the face involving the right half of the lower mandible, where there was a defect of at least an inch in the bone which had been blown away, the whole lower part of the cheek and right half of the mouth, which involved both upper and lower lips, and the tip of the nose and the right ala. This wound was infected with maggots, and was indescribably foul. (3) Shell wounds on the buttocks which were superficial and suppurating. (4) Shell wound

just below right clavicle, with partial paralysis of right arm. Pulse was present on that side. (5) Wound of right great toe. (6) Simple Pott's fracture of both bones of the right leg, apparently involving the ankle-joint, probably caused by falling. The fractured leg was put up in a Cabot splint. The mouth wound was cleaned, and a number of plastic operations performed, some of which are illustrated. The four wounds of the nose, cheek, and chest were all made by a single missile, and were in direct line. The course of the bullet was from the nose to the cheek to the lower jaw, where it had its exit; it entered again just below the clavicle, and penetrated through the axilla, where it injured the brachial plexus, finally making its exit beneath the middle of the scapula behind, or its course may have been in the reverse direction. The injury of the brachial plexus was not a complete division of any of its branches, as the movements of the arm could be carried on, though greatly weakened. The jaw was repaired with grafts from the tibia.

80. Radiography in Gunshot Wounds of the Skull.

VILVANDRE (*Arch. radiol. et élec.*, February, 1916) says that to trephine a skull for a depressed fracture, the clinical signs of which are obvious or even urgent, without first ascertaining the presence or absence of a missile by x rays, is irrational. The relief of decompression may be obtained within a few hours, but if the patient still has a bullet or piece of shrapnel in his brain the prognosis is not really improved. At the same time, while recognizing the importance of radiography previous to operation in skull cases, there are cases, in which x rays apparently fail. Even a good radiogram may be negative when the clinical symptoms point to the presence of a depressed fracture, and the failure is still more obvious in the case of a small linear crack or fissure. Damage to the skull, furthermore, is, as a rule, more extensive than can be shown in the radiograph, probably owing to the incidence of the rays on a round body. The author has noticed, in operating theatre and wards, that skulls with long comminuted fractures—even skulls in which the depression is great—do well provided no foreign body is present. The connexion between extensive fracture and good recovery has impressed the author, and he suggests that long fractures may be more efficient in relieving pressure than localized small trephining of one inch or so in diameter. A widespread decompression of a moderate degree may perhaps be better than decompression of a greater degree in a smaller area. In the cases of which he is thinking the bone remains in place, being only lifted up through intracranial pressure. The natural juxtaposition of the bone to the dura, and of the latter to the grey matter, persists to a great extent in such cases, and tends to prevent hernia cerebri and its sequelae of brain destruction and sepsis. The author wonders whether the lifting up of a large area of bone, and replacing it after the necessary cleaning of clot and removal of loose bodies is not to be preferred to the trephining and removal of bone by the ordinary method. Future callus may entail further compression, but many fractured skulls, untouched by the surgeon, do well, and the sufferers go through life without further symptoms, except some slight headache.

81. Night Blindness in Soldiers.

IN a communication to the Paris Académie de Médecine, Dr. WECKER, lecturer at the University of Liège (*Journ. de méd. et de chir. prat.*, May 10th, 1915), called attention to the occurrence of hemeralopia in soldiers, a fact which he said did not appear to have been noted in former wars. Men who see quite well in daylight lose their vision at night, so that they fall into ditches, and into craters often full of water, and require to be helped on their way by their comrades. Often these men, though very brave, dread being put on duty as sentries at advance posts, feeling themselves unequal to the responsibility thus thrown upon them. If they are drivers of vehicles they are unable to do the work at night. Of 3,977 patients in an ophthalmological service at the front, 409, or about 10 per cent., presented very distinct symptoms of hemeralopia. In all the fundus was normal. The principal causes of night blindness—nervous exhaustion, overstrain, want of sleep—are found in abundance among soldiers. A well known form of the disease is that which occurs in endemic form in penitentiaries and orphanages, and in ships, owing to insufficient or improper nourishment. During the seven weeks just before Easter, in Russia, hemeralopia is very common. But among Wecker's patients there was no question of underfeeding. The treatment which he found successful was care of the general health and rest; decided improvement followed the wearing of smoked glasses. If any myopia, presbyopia, or astigmatism were present, those conditions were dealt with by appropriate glasses.

82. Extraction of Intracranial Projectiles under Fluorescent Screen.

ROUVILLOIS (*Arch. d'électr. méd.*, No. 401, 1916) practises the extraction of intracerebral foreign bodies directly under the control of the fluorescent screen. He first takes two radiographs (a front and a profile view), and decides from this information upon a datum point as precise as possible. The patient is then taken to the operating theatre, and trephining is practised according to the ordinary technique, care being taken afterwards to dilate the entrance of the tract in the general direction indicated by the preliminary radiography. This little manoeuvre frequently permits of the evacuation of clot and débris, and prepares the way for the forceps. The patient is then returned to the radiographic couch, and, a screen inspection showing that the projectile is still in the same position, extraction is practised there and then. For this purpose the author uses forceps bent at the junction of the blades at an angle of about 45 degrees, similar to that used for foreign bodies in the external ear passage. Holding the fluoroscope in the left hand, he introduces the forceps with the right, working under the control of the screen image, and knowing already the general direction of the foreign body from the previous x-ray examination. After extraction, he introduces immediately into the intracerebral passage a drainage tube of sufficient calibre, but penetrating not more than 1 or 2 cm. By means of this drain he injects, under pressure, with a syringe, an antiseptic liquid. He claims that this technique permits one, with a little practice, to extract even small and deeply situated intracerebral projectiles with the minimum of operative damage, and in a time varying from thirty seconds to one and a half minutes.

83. Treatment of Wounds by Hyperaemia.

E. SEHRT (*Muench. med. Woch.*, March 7th and 14th, 1916), says that the treatment of wounds of limbs by Bier's method of hyperaemia has given eminently satisfactory results. He found that, provided the treatment was begun within the first twenty-four to sixty hours of the infliction of the wound, both the local and general reaction to infection was reduced to a minimum, infection being in many cases completely aborted. Since he had begun, in May, 1915, to use this method in severe wounds of the limbs he had never seen a case of gas gangrene originating in such an injury. Severe shell wounds of the trunk he still treated with free incisions. By avoiding the use of the knife in severe wounds of the limbs, and relying mainly on treatment by hyperaemia, he had prevented the occurrence of troublesome post-operative scars. After giving details of many cases, he concludes by insisting on the importance of the treatment being instituted at the earliest possible date.

LINBERGER (*Ibid.*, February 29th, 1916) gives details of several cases treated by continuous hyperaemia, which was found to be applicable even in the field. Indeed, after the first days, this treatment required no more time than any other treatment of severe wounds. The method was particularly useful in projectile wounds of the knee-joint, practically all of which were infected, and it was mainly due to this treatment that suppuration of this joint was seldom seen by him. Even when it did occur, it was kept in check by the hyperaemia which rendered extensive operations superfluous. The fever, which was invariably present at the commencement of the treatment, soon abated; and the pain, which was often severe, decreased under the treatment, and usually ceased after twenty-four to thirty-six hours. The ultimate results were also satisfactory.

84. Sling Atrophy.

ROCHARD and STERN (*Journ. de méd. et de chir. prat.*, May 25th, 1916) call attention to the evil effects of the too prolonged wearing of arm slings, which they say tends to transform wounded men into chronic invalids. In a typical case the whole limb is wasted; the muscles from the deltoid to the interossei are atrophied; the skin of the hand is thinned, damp, violet blue in colour, and so cold that the patient often wears a warm glove. The joints of the shoulder, elbow, wrist, and fingers are stiffened as if by rust; and passive movement causes pain and resistance. If the limb is allowed to hang free, it retains the same position as when carried in the sling; the arm is fixed to the trunk, the forearm flexed, the hand and fingers point downwards. The falling of the fingers towards the ulnar side is the characteristic sign that the sling has been worn too long; it is caused by the weight of the unsupported end of the limb, and in inveterate cases corresponds to a true inward subluxation—slow, progressive, and often irreducible—of

the hand and especially of the fingers. Active movements are awkward, jerky, weak, and limited; they are often accompanied by slight quick tremor. The authors insist that *écharpés*, as they call them, are neither true simulators nor really functionally disabled; they have lost the habit of movement, and the condition is one of atrophy and ankylosis produced by too long immobilization. A wounded limb is forthwith put in a sling, and kept thus supported for an indefinite time. The man finds it relieves him while the hurt is painful; afterwards it gives him the agreeable sensation that everyone gets from holding on to the side strap in a railway carriage. Insidiously the limb wastes and stiffens, and the man becomes a confirmed invalid. The first thing to be done is to dispense with the sling, notwithstanding the protests of the patient and sympathetic friends. Then if there be no definite contra-indication, such as false joint or arthritis, passive movement and massage should be employed. The treatment should at first be carried out by the doctor, who by gentleness and persuasion will gain the confidence of the patient and encourage him to put his will power in action. Of course, in cases where there is an anatomical lesion a sling is necessary; it is the abuse of it that is condemned.

THERAPEUTICS.

85. Prophylactic Inoculation against Dysentery.

ACCORDING to G. SEIFFERT and O. NIEDIECK (*Muench. med. Woch.*, February 29th, 1916), most cases of dysentery in Germany among soldiers and prisoners are due to the relatively harmless bacteria associated with the names of Lentz and Kruse. Accordingly, prophylactic inoculation has mainly been undertaken against these bacteria, whereas inoculation against the Shiga-Kruse bacteria has hitherto seldom been required. The outbreak of a small epidemic in the camp to which the authors were attached gave them the opportunity of studying the effect of inoculation in about 2,000 cases. The reactions of the serum to this inoculation were noted in several cases, and the constant development of antibodies was interpreted as evidence of acquired immunity. The cessation of the epidemic coincided with the change in the weather from severe heat to cold and rain; and it was therefore doubtful whether this or the inoculations were responsible. The authors conclude that there is at present insufficient material on which to base a final judgement on the results of inoculation against dysentery. It is also uncertain how long the immunity lasts, but probably it is short-lived, and it may therefore be necessary under certain conditions to repeat the inoculation after a few months.

86. Fibrolysin in Recent Cutaneous Scars.

HENRI TOUSSAINT (*Bull. et mém. de la Soc. de Chir. de Paris*, August 17th, 1915) has made trial of subcutaneous injections of fibrolysin for the loosening of recent scars. A six weeks' course of injections of thiosinamine did no good in a case in which the urethra was occluded from pressure by cicatricial tissue the result of a wound inflicted four months before. Injections of fibrolysin gave encouraging results in two cases in which there was an adherent cutaneous scar prolonged by an indurated cord, in each case caused by a wound from a fragment of shell received about a month before the injections were begun. The wound was situated in one case above the knee close to the internal saphenous nerve, in the other on the latero-external aspect of the neck. Both patients complained of excessive pain, especially at night. In both Wassermann's reaction was negative; 4 c.cm. of fibrolysin were injected every other day, the needle being pushed deeply along the indurated cord. Even in the case of the patient wounded in the neck, who was a very nervous subject, the injections caused no pain, although he had been unable to bear the rubbing of a collar on the site of the wound. Suggestion was used to further the cure, and the patient was assured that pain would cease as soon as the skin was freed from its adhesions. Massage was used with the injections, and the patient was told to massage the scar himself at odd times. At the end of six weeks the scar was free from the subjacent tissues and the hyperaesthesia had disappeared. The author suggests that in cases similar to those described it is advantageous to free the cutaneous and subcutaneous tissues in order to liberate the nerve fibres which give rise to the pain; also where a quite recent cutaneous scar is threatening to imprison a tendon or a sensory or mixed nerve fibrolysin may prove of great benefit. Treatment must, however, be begun early, it being useless to try the method three or four months after the infliction of a wound which has been accompanied by more or less prolonged suppuration.

THE HALF-YEARLY INDEXES FOR 1915.

The usual half-yearly indexes to the JOURNAL, to the EPTOME, and to the SUPPLEMENT have been prepared and will be printed. They will, however, not be issued with all copies of the JOURNAL. Any member or subscriber who desires to have one or all three of the indexes can obtain a copy of what he wants, post free, by sending a post-card notifying his desire to the Financial Secretary and Business Manager, British Medical Association, 429, Strand, W.C. Such copies will be dispatched shortly after the middle of January.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

SCOTLAND.

SCOTTISH MEDICAL SERVICE EMERGENCY COMMITTEE.

The Scottish Medical Service Emergency Committee has issued the following memorandum setting out in concise form the recruiting scheme which it has drawn up for Scotland:

MEDICAL RECRUITING SCHEME, 1916.

Some months ago, by desire of the various professional executives in Scotland, we undertook as a Committee the duty of bringing under the notice of practitioners the need of the army for more medical men. At the request of the War Office we agreed further to deal with applications by practitioners for commissions in the Royal Army Medical Corps. The outlines of our policy, and the procedure which we proposed to follow, were set out in our memorandum of June 28th last,¹ a copy of which was sent to all Scottish practitioners. With the help of local War Committees—to whom we are much indebted—the plans so laid down were carried out, and a satisfactory response was made by the profession to our recent calls upon them.

Since the period in question, however, there has come into being the general recruiting scheme promoted by Lord Derby, which has impressed all men of military age with an increasing sense of their obligations towards the country, and we are now in consequence requested by the Director-General of Army Medical Services, with the concurrence of Lord Derby, to continue and expand our work in such a manner as to form a link with the general arrangements of the recruiting scheme. It is intended that the duty of dealing with members of the medical profession in Scotland, so far as the medical service of the army is concerned, shall, subject to the instructions of the Director-General, continue to be discharged by us, and we are authorized to state that medical men who have been approached by agents of local recruiting organizations on the ground that they are of military age, under Lord Derby's scheme for the lay population, should apply to us for guidance.

In drawing up a new scheme to meet these new conditions, we require in the first place to ascertain what service or services each practitioner resident in Scotland will be prepared to render if called upon. The War Office has decided (1) that no man under 45 years of age will be employed as a commissioned officer in the Army Medical Service unless he undertakes general service obligations for a year, and is found to be physically fit for duty at home and abroad; and (2) that no man over 55 years of age will be accepted for home service. In accordance with this decision practitioners are divided into three groups, and the services appropriate to each group are noted in the following schedule:

Group.	Age.	Service.
A.	Under 45	Lieut., R.A.M.C. (<i>general service</i>).
B.	45 to 55	Lieut., R.A.M.C. (<i>home service</i>). Part-time home military work. <i>Locum tenens</i> away from home (for practitioner absent on service). Part-time home civil work (in carrying on practice or part of practice of neighbouring practitioner absent on service).
C.	56 and upwards	Part-time home military work. <i>Locum tenens</i> away from home (for practitioner absent on service). Part-time home civil work (in carrying on practice or part of practice of neighbouring practitioner absent on service).

As regards these services, attention is drawn to the enclosed registration form, which should be filled in by all practitioners resident in Scotland who do not hold a commission in a branch of the Royal Army Medical Corps or in the Medical Department of the Navy. As it is our duty not only to obtain applications for commissions, but also to safeguard the interests of the general public by preventing undue depletion of any district, offers by practitioners to serve with the army or to act as whole-time locum tenentes will be held as subject to the condition that arrangements can be made to have their present civil work carried on during their absence.

In organizing medical effort throughout Scotland generally, we propose to act as heretofore in co-operation with the local War Committees which we have recognized for each Division of the British Medical Association. When the results of our registration inquiry have been ascertained and collated, we shall confer with these local committees and determine the number of practitioners who should be expected to go on service from each area. The local committees, acting on our instruction, will, after timely notice, as occasion demands, call upon selected practitioners to give the service appropriate to their age group.

In making a call for whole-time military service, the local War Committee will issue to practitioners the army form of application for a commission in the Royal Army Medical Corps, and these forms, when filled in, should be returned to the secretary of the local War Committee, and the subsequent arrangements should be made through him. In making calls for other services, the secretary of the local War Committee will provide practitioners with all necessary information. These calls, which will be

¹ BRITISH MEDICAL JOURNAL, July 3rd, 1915, p. 20.

successive, will begin to be made in the month of January, 1916. Precise dates for calls succeeding the first cannot now be stated. We shall, in instructing local Committees, be guided by our knowledge of the needs of the army as intimated to us from time to time by the Director-General.

On any question of duty which may arise in consequence of such calls or otherwise, practitioners are at liberty to refer to us as a body duly appointed and empowered to issue letters of excuse. Notice of this must be given on the appropriate form (Form Q), which may be obtained from the secretary.

Questions of physical fitness or unfitness are expressly excluded from our province, and can be decided only by a regular officer of the Royal Army Medical Corps following an application for a commission as lieutenant. Men so decided to be physically unfit should offer for one or more of the remaining services in the schedule.

The memorandum is signed by the members of the Committee, who are the Presidents of the Colleges of Physicians and Surgeons of Edinburgh, the President of the Royal Faculty of Physicians and Surgeons of Glasgow, the Deans of the Faculty of Medicine of the Universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh, the Professors of Pathology and Medicine in the University of Glasgow, the Chairman and Vice-Chairman of the Scottish Committee of the British Medical Association, the President of the Aberdeen Branch and the Secretary of the Edinburgh Branch of the British Medical Association, by the Deputy-Chairman and a medical officer of the Insurance Commission, Scotland, and by the convener of the Committee, to whom, at the Royal College of Physicians, Edinburgh, all communications should be addressed.

The memorandum is accompanied by a series of forms:

1. *The Registration Form* to be filled in by a practitioner not holding a commission, giving his name, qualifications, address, and age. In addition, it affords spaces for a statement of the nature of the work at present being done, and for intimating the group in which the practitioner is prepared to render service and the following pledge:

At the call of the local War Committee for my area, as instructed by the Scottish Medical Service Emergency Committee, I am prepared to render the service or services marked above. This offer is subject to the condition that, in the event of such service requiring me to leave my present work, I am enabled to make arrangements for having it carried on during my absence.

2. *The Intimation Form* for the case of a practitioner holding a commission to be filled in by himself.

3. *An Application Form* for a commission R.A.M.C., signed by the secretary of the local War Committee for the Division, and stating that the Committee is of opinion that the arrangements made for carrying on his work during his absence in the event of the practitioner obtaining a commission, are satisfactory, and specifying their nature.

4. *Whole-time or Part-time Service.*—This form, which is to be signed by the secretary of the local War Committee for the Division, is to be used to intimate that a practitioner has undertaken whole-time or part-time service under the medical recruiting scheme, 1916, and in the case of a practitioner undertaking whole-time service will state the nature of the arrangements made for carrying on his work during his absence, and that the committee is of opinion that these arrangements are satisfactory.

5. *An excuse form (Q)* on which, when any question of duty has arisen, in consequence of calls to join the R.A.M.C. or otherwise, practitioners may refer to the committee as a body duly appointed and empowered to issue letters of excuse.

6. *Letter of Excuse.*—This form is provided with a counterfoil, and is in the following terms:

LETTER OF EXCUSE.

No.

Dr.

Address.

The Scottish Medical Service Emergency Committee is of opinion that it is meantime undesirable in the public interest to call on the above-mentioned medical practitioner to undertake military service.

This Letter is valid till.

Secretary.

Convener.

Royal College of Physicians, Edinburgh. 19.....

Either a registration or an intimation form—but not both—should be filled in in respect of each practitioner.

The appropriate form, duly filled in, should be returned

to the Secretary, Scottish Medical Service Emergency Committee, Royal College of Physicians, Edinburgh, before December 31st, 1915.

IRELAND.

CIRCULAR BY THE LOCAL GOVERNMENT BOARD TO BOARDS OF GUARDIANS.

THE following is the text of the letter sent to Boards of Guardians throughout Ireland:

Local Government Board, Dublin,
November 26th, 1915.

Sir,

The Local Government Board for Ireland desire to bring under special notice the fact that a large number of Irish medical practitioners are at present on temporary service with the Army and Navy—that, in consequence, there has been, since the outbreak of the war, a marked dearth of candidates for Poor Law medical appointments. Furthermore, the making of these permanent appointments during the continuance of the war appears to the Board to be inequitable to the doctors who, out of motives of patriotism and humanity, have placed their services, for the time being, at the disposal of the Government. The Local Government Board would, therefore, suggest that the Board of Guardians should defer filling up any further vacancies that may occur, and should wait and make the best temporary arrangements possible, pending the return of normal conditions on the termination of the war.

I am, Sir, your obedient Servant,
A. R. BARLAS.

Secretary.

Association Notices.

MEETING OF COUNCIL.

THE next Meeting of Council will be held on Wednesday, January 26th, in the Council Room, 429, Strand, London, W.C. The hour will be notified later.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 1st, 1916.

INSURANCE.

THE RECORD CARDS FOR THE YEAR 1915.

It may be well to remind practitioners of the circular which presumably will have been received ere this by every panel practitioner from the Commissioners with reference to the filling up and forwarding of the record cards for the year 1915.

For the purpose of computing in the future what would be a fair remuneration for panel practitioners, it is most important that every attendance given to panel patients should be carefully filled in. It is by no means impossible that some attempt may be made on the score of economy, or for other reasons, to reduce the amount at present provided for medical benefit, and if the record cards are carelessly filled in and only show a much smaller number of attendances than have actually been necessary, the cards themselves may furnish an argument in favour of a reduction of payment which the profession could hardly explain away by saying that many attendances had not been recorded. The instructions given by the Commissioners should be most carefully carried out, as the keeping of the cards and forwarding the two halves to the Commissioners and the Insurance Committees respectively are conditions attached to the payment of the additional grant of 2s. 6d. per insured person provided by the Exchequer towards the cost of medical benefit; failure to carry out the instructions may lead to a deduction from the amount otherwise payable to any defaulting practitioner. It will be noticed that the following instruction is additional to last year's circular:

(j) Where a doctor is acting as deputy for a colleague who is absent with H.M. Forces, care should be taken to forward separately the records relating to the latter's patients. These records should, of course, bear the name of the absent doctor.

SCOTLAND.

MEDICAL BENEFIT REGULATIONS, 1915, No. 2.

THE National Health Insurance Joint Committee, acting jointly with the Scottish Insurance Commissioners, have issued regulations, dated November 11th, 1915, which provide:

1. That the modifications made in 1914 of Articles 16, 17, 18, 19 of the Medical Benefit Regulations of 1913 shall continue in operation during 1916.

2. That on and after January 1st, 1916, every agreement between insurance committees and practitioners shall be read and have effect as if the following provisions were inserted:

(a) The Committee may, after consultation with the Panel Committee, at any time require that, subject to such exceptions and qualifications, if any, as may be agreed between the Committee and the Panel Committee, or, in default of agreement, may be determined by the Commissioners, the practitioner shall not give any order for any drug or appliances in such a form as to necessitate a reference on the part of the person supplying the drug or appliance to a previous order.

(b) The Committee shall give not less than fourteen days' notice to the practitioner of their intention to bring the foregoing provision into operation.

3. The following provisions shall be substituted for Article 3 of the National Health Insurance (Medical Benefit) Regulations (Scotland), 1915, which is hereby revoked:

(1) An insured person whose name is included in the list of a practitioner on the panel who is at any time during the month of November, 1915, holding a commission in the Naval or Military Forces of the Crown shall not be entitled to select another practitioner or method of treatment at the end of the medical year ending on December 31st, 1915, unless, in addition to giving notice to the committee in the manner and within the period required by paragraph (1) of Article 30 of the National Health Insurance Medical Benefit Regulations (Scotland), 1913, he satisfies the Medical Service Subcommittee of the Committee that he has reasonable grounds for desiring to be removed from the list of the practitioner holding a commission as aforesaid, and paragraphs (1) and (2) of Article 30 shall be modified accordingly.

(2) Nothing contained in this article shall affect the right of an insured person under Articles 26 and 45 of the last-mentioned regulations to be transferred to the list of another practitioner on the panel subject to the conditions contained in those regulations.

IRELAND.

MEDICAL CERTIFICATION OF SICKNESS BENEFITS.

At a meeting of the County Cavan medical practitioners on December 16th, 1915, when Dr. Acheson was in the chair, the following resolutions were unanimously passed:

(a) That the best thanks of the co. Cavan doctors be tendered to Dr. T. Hennessy for his untiring exertions on behalf of the Irish medical profession in connexion with the medical certification question under the Insurance Act, and we feel confident that it was owing to the skill and ability of Dr. Hennessy, ably assisted by the Irish Medical Committee, that so satisfactory an arrangement has been concluded.

(b) That all the co. Cavan doctors be recommended to sign the Insurance Commissioners' agreement pending the issue of the memorandum as promised by the National Health Commission.

(c) That the action of the Local Government Board in preventing Poor Law medical officers in the interests of the sick undertaking the certification of other doctors' patients resident in their own and adjoining districts has the support and approval of the co. Cavan doctors.

At a meeting of the medical profession, held at the Royal College of Physicians last week, to consider the proposed agreement sent by the Commissioners for National Health Insurance for Ireland to all the doctors of Ireland, a resolution was unanimously passed recommending the members of the medical profession in and around Dublin to sign the agreement, as the meeting was of opinion that it was an honest attempt to settle the question of medical certification.

INSURANCE ACT IN PARLIAMENT.

DRUG TARIFF.

In reply to a question by Mr. Booth, on December 21st, Mr. Charles Roberts said that the duty of pricing prescriptions had been transferred to Insurance Committees by regulations recently framed in accordance with the recommendations of the Departmental Committee on the Drug Tariff, and it was the statutory duty of committees to make administrative provision for the purpose of calculating the payments due to chemists under the agreements already entered into for 1916. The Commissioners had been in communication with the Committee as to the arrangements, necessitated by this duty, which they understood were in course of preparation by the Committee. Committees had already been informed that special provision would be made for meeting any additional expenditure properly incurred by them on this work out of sums released in consequence of the new tariff arrange-

ments. Any such estimate as that suggested by Mr. Booth—£4,000—of the additional cost involved appeared to be greatly in excess of any reasonable anticipation. Mr. Booth retorted that the estimate had been formed in conjunction with the officer and staff of the Insurance Commissioners, and added that pressure was being brought to bear on the London Committee to employ girls fresh from school in cellars in Chancery Lane to read thousands of Latin prescriptions by artificial light. Mr. Roberts admitted on these matters want of information, and Mr. Booth promised that it should be supplied.

UNCLAIMED CONTRIBUTION CARDS.

In reply to Mr. Haydn Jones, who asked on December 22nd why the number of unclaimed insurance cards bearing stamps in the hands of the Commissioners for Wales was as high as 39,000, Mr. C. Roberts said that he was informed that nearly half the cards referred to consisted of cards recovered from insured persons who had enlisted, and of emergency cards received from certain large employers who had now discontinued the use of such cards except in the appropriate circumstances.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following announcements are made by the Admiralty: Surgeons J. F. McQueen to the *Victory*, additional, for disposal; J. B. Martin, M.B., M.A., to the *President*, additional, for R.N.A.S.; A. V. J. Richardson to the *Harrier*; C. D. Bell, M.B., to the *Europa*, additional; Temporary Surgeons J. D. Milligan, M.B., to the *Victory*, additional, for disposal; F. J. F. Barrington, M.B., to the *Victory*, for R.N. Division; H. S. Libby to the *Vind*, additional, for Plymouth Hospital; C. E. Jenkins, H. S. Jeffries, B.A., T. S. Gibson, J. D. Murphy, M.B., B.A., C. Gardiner-Hill, A. O. Gray, H. F. Stephen, F. T. Grey, M.B., and J. R. Simpson, M.B., to the *Victory*, additional, for Haslar Hospital; A. G. McKee to the *Commonwealth*, vice Rothwell; J. S. Jobson, M.B., F.R.C.S., to the *Victory*, additional, for R.N. Division, vice Lauderdale; E. M. Lauderdale to the *Victory*, additional. To be temporary Surgeons: O. H. Gotch, M.B., M.A., C. M. Williams, H. S. Libby, W. H. Edmunds, H. F. Stephen, M.B., H. M. Oddy, M.B., M.A., J. Duffin, M.B., F. T. Grey, M.B., A. C. Brown, M.B., G. W. M. Findlay, M.B., J. B. Simpson, M.B.

ARMY MEDICAL SERVICE.

Temporary Colonel G. L. Gulland, M.D., relinquishes his commission. Major (temporary Lieutenant-Colonel) J. G. Bell, M.B., relinquishes his temporary rank on vacating the appointment of Assistant Director of Medical Services.

ROYAL ARMY MEDICAL CORPS.

Temporary Lieutenant-Colonel Sir Ronald Ross, K.C.B., F.R.S., F.R.C.S., relinquishes his commission.

Lieutenant-Colonel D. Macauley, South African Medical Corps, to be temporary Lieutenant-Colonel.

Major H. Hemsted, South African Medical Corps, to be temporary Major.

Temporary Captain W. P. Morgan, M.B., relinquishes his commission.

Temporary Lieutenants to be temporary Captains: W. L. G. Davies, N. E. Hallows, M.B., A. Gibson, M.B., F.R.C.S., C. Wace, F.R.C.S., E. B. Smith, M.D., R. W. Gemmell, M.B., F. B. McArthur, M.B. To be temporary Captains: F. W. Twort, H. Dickie, M.D., T. G. Moorhead, M.D.; temporary Captain G. Beley, from York and Lancaster Regiment.

Temporary Lieutenants relinquish their commissions on the dates shown against their names, and not as stated in the *Gazette* of September 11th, October 1st, and November 11th, 1915, respectively: D. Morrow, August 24th, 1915; R. Bright, September 12th, 1915; J. W. Littlejohn, M.D., October 11th, 1915.

Temporary Lieutenant J. Brewer is placed temporarily on retired pay on account of ill health (substituted for the notification which appeared in the *Gazette* of November 17th, 1915).

The notification regarding temporary Lieutenant A. E. F. L. Forbes which appeared in the *Gazette* of December 3rd, 1915, is cancelled.

The appointment to a temporary Lieutenantancy of C. D. Halcombe, M.B., is antedated to September 4th, 1915.

To be temporary Lieutenants: J. R. Boyd, M.D., J. Anderson, M.B., E. Sutcliffe, J. Unsworth, M.B., O. D. B. Mawson, W. Bannerman, M.B., H. P. Gibb, M.B., F.R.C.S., G. F. Bird, M.B., C. H. Edwards, M.B., C. E. A. Boddart, E. B. Austin, M.B., W. E. Hills, J. S. Taggart, M.B., T. Ewing, M.B., D. M. Dickson, R. Anderson, R. H. Shepard, I. F. MacKenzie, W. Parker, M.B., W. Bligh, M.D., J. R. Craig, M.B., T. C. Harks, R. J. Bethune, M.D., N. H. Austin, J. F. MacLeod, M.B., T. H. Oliver, M.B., B. E. Spurgin, M.B., W. Strling, M.B., M. G. Pettigrew, J. G. Gray, R. H. Bremridge, M.B., R. H. Urwick, M.D., A. E. Fiddian, W. M. Penny, M.D., J. Bowen-Jones, W. E. Barker, M.B., H. R. S. Walford, R. J. Vernon, M.B., A. J. Beadel, J. A. Lowry, M.D., A. Campbell, M.B., J. C. Padwick, J. A. K. Griffiths, M.B., S. E. Dudley, A. W. Senior, O. H. G. Ross, M.B., W. W. Stacey, M.B., L. M. Smith, G. B. Buckley, G. Stowell, M.B., T. H. Clarke, P. Verdon, P. L. Moore, M.B., J. W. Jackson, M.B., T. M. Boddy, C. O. Twort, M.D., A. G. Peter, M.B., H. L. Askham, A. W. Wilcox, M.D., G. D. E. Tullis, M.B., C. H. Ferguson, M.B., W. Crabtree, M.B., J. W. Tocher, M.B., J. R. Ross, G. D. Grippen, T. W. E. Moreton, C. H. Phillips, M.D., J. A. Marsden, H. C. W. Allott, W. Allan, M.D., J. Welsh, J. Pender, M.B., H. Miller, M.B., T. Surby, M.B., W. J. Edgar, F. J. Strachan, M.B., H. Hargreaves, M.B., A. Davidson, M.D., H. E. Dyeon, M.D., F. P. Young, M.D., D. Kennedy, M.D., E. Hesterlow, M.B., A. L. McCreey, M.B., W. Darlington, M.B., H. O. Gough, J. D. Cooke, M.B., F.R.C.S., R. G. Brown, W. B. Tannabill, M.B., K. Pretty, M.B., J. Ross, M.D., O. V. Burrows, M.B.

The undersigned relinquish their temporary honorary commissions on ceasing to be employed with No. 7, British Red Cross (Allied Forces Base) Hospital: Lieutenant-Colonel W. E. Miles,

F.R.C.S., Major H. D. Gillies, F.R.C.S., Captains R. G. Murray, A. E. Forester, J. S. Burn, M.B., J. E. Adler, F.R.C.S., Quartermaster and honorary Lieutenant D. Rose. Temporary honorary Lieutenant B. G. Klein, M.D., having ceased to be employed with the Welsh Hospital, Netley, relinquishes his commission.
H. A. F. Wilson to be temporary honorary Lieutenant whilst serving with the British Red Cross Hospital, Netley.
To be temporary honorary Lieutenants: P. H. Wells, E. G. Dingley, J. N. Deacon, M.B., G. C. Berg, O. H. C. Byrne.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

East Anglian Casualty Clearing Station.—Lieutenant W. J. Delghan to be Captain.

East Anglian Field Ambulance.—Lieutenant S. J. Fielding, M.B., to be Captain.

Eastern General Hospital.—Lieutenant E. F. Ballard, M.B., to be Captain.

East Lancashire Field Ambulance.—C. W. Fort, M.B., and A. W. Berry, M.B., to be Lieutenants. Lance-Corporals T. H. Calverley, from Manchester Regiment, and J. M. Lowe to be Quartermasters, with the honorary rank of Lieutenants.

East Lancashire Casualty Clearing Station.—Lieutenant E. A. Williams to be Captain.

Highland Field Ambulance.—Lieutenants B. J. Alcock, M.B., and J. G. Anderson to be Captains.

Home Counties Field Ambulance.—Captain J. E. Ryan, M.D., from London Field Ambulance, and Lieutenant M. C. Hayward to be Captains.

London Sanitary Company.—D. Porter, M.B., to be Lieutenant.

Lowland Field Ambulance.—Lieutenant W. B. Stewart, M.B., to be Captain.

Northern General Hospital.—The following announcement is substituted for that which appeared in the *Gazette* of December 2nd, 1915: Lieutenant-Colonel Joseph F. Dobson, M.B., F.R.C.S., is placed on temporary retired list on account of ill health. Lieutenants W. A. Slater, M.B., H. D. Pickles, M.B., and T. S. P. Parkinson, M.B., to be Captains.

South Midland Casualty Clearing Station.—G. H. Kirby to be Lieutenant.

South Midland Field Ambulance.—F. A. J. Mayes to be Lieutenant.

South Midland Mounted Brigade Field Ambulance.—Lieutenant F. Smith to be Captain.

Southern General Hospital.—Lieutenant A. Radford, M.B., to be Captain. T. S. Stafford (late temporary Lieutenant R.A.M.C.) and A. N. Worsley, M.B., to be Lieutenants.

South-Western Mounted Brigade Field Ambulance.—Lieutenant J. H. Cumming to be Captain.

Superannuary for Service with the O.T.C.—Lieutenant J. P. Kinlock, M.D., to be temporary Captain whilst serving with the Aberdeen University Contingent, Senior Division, O.T.C.

Western General Hospital.—Lieutenant F. Chadwick, M.B., to be Captain.

West Lancashire Casualty Clearing Station.—D. F. Hunter, M.D., to be Lieutenant.

West Lancashire Field Ambulance.—Lieutenants to be Captains: J. P. Thierens, M.B., and W. F. Young, M.B. A. H. Pinder and A. V. Glendenning, M.B., to be Lieutenants.

Attached to Units other than Medical Units.—Lieutenant G. J. M. Trotter to be Captain. J. B. Smith, M.B., and J. M. Orr, M.D., to be Lieutenants.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN the ninety-six largest English towns 7,577 births and 5,954 deaths were registered during the week ended Saturday, December 11th, 1915. The annual rate of mortality in these towns, which had been 15.9, 16.7, and 18.5 per 1,000 in the three preceding weeks, fell to 17.1 per 1,000 in the week under notice. In London the death-rate was equal to 17.9, while among the ninety-five other large towns it ranged from 7.4 in Ilford, 7.7 in Enfield, 8.1 in Acton, 9.8 in Aberdeen, 10.2 in Willesden, and 10.5 in Wimbledon and in Leyton, to 22.7 in Burnley, 22.8 in Huddersfield, 23.7 in Barrow, 23.9 in Middlesbrough, 24.2 in Preston, and 25.8 in Wakefield. Measles caused a death-rate of 1.7 in Stockport, 1.9 in Cardiff, 2.0 in Dudley, 2.1 in Gloucester, 2.2 in Leicester, and 2.3 in Burnley; whooping-cough of 1.3 in Preston and 1.5 in West Bromwich; and diphtheria of 1.2 in Middlesbrough, 1.3 in Coventry, and 2.1 in St. Helens. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 67, or 1.1 per cent., of the total deaths were not certified by a registered medical practitioner or by a coroner; of this number, 12 were recorded in Liverpool, 9 in Birmingham, 4 in London, and 3 each in St. Helens, Warrington, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,027, 2,927, and 2,811 at the end of the three preceding weeks, further fell to 2,738 on Saturday, December 11th; 282 new cases were admitted during the week, against 336, 318, and 278 in the three preceding weeks.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRKENHEAD BOROUGH HOSPITAL.—House-Surgeon and Junior House-Surgeon. Salaries, £200 and £170 respectively.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.—House-Surgeon (male ineligible for military service, or female). Salary, £200 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £120 per annum in each case.

BURTON-ON-TRENT COUNTY BOROUGH.—Assistant Medical Officer (ineligible for military service). Salary, £300 per annum.

BURY INFIRMARY.—Junior House-Surgeon (ineligible for military service). Salary, £150 per annum.

BURY INFIRMARY.—(1) Senior House-Surgeon; (2) Junior House-Surgeon (both ineligible for military service). Salary for (1) £250 per annum, and for (2) £150 per annum.

CROYDON GENERAL HOSPITAL.—House-Surgeon (male, ineligible for military service, or female).

DERBYSHIRE HOSPITAL FOR SICK CHILDREN.—Lady Resident Medical Officer. Salary, £200 per annum.

HEREFORD COUNTY AND CITY ASYLUM.—Assistant Medical Officer (ineligible for military service). Salary commencing at £250 per annum.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130 per annum.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN, Cheetham Hill Road. — Lady House-Surgeon. Salary, £120 per annum.

NORTH STAFFORDSHIRE INFIRMARY, Hartshill, Stoke-on-Trent.—House-Physician (male or female). Salary, £200 per annum.

NORWICH POOR LAW INFIRMARY.—Lady Resident Medical Officer. Salary, 5 guineas weekly.

OXFORD EYE HOSPITAL.—House-Surgeon (British, man—ineligible for military service—or woman). Salary, £100 per annum.

PLYMOUTH: SOUTH DEVON AND EAST CORNWALL HOSPITAL.—House-Physician (male, ineligible for military service, or female). Salary, £240.

ROYAL EYE HOSPITAL, Southwark, S.E.—House-Surgeon (ineligible for H.M. Forces). Salary at the rate of £150 per annum.

SHEFFIELD: ROYAL INFIRMARY.—House-Surgeon (male, ineligible for military service, or female). Salary, £100 per annum.

WELSH METROPOLITAN WAR HOSPITAL, Whitechurch, near Cardiff.—Resident Physician (ineligible for military service).

WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Lady House-Surgeon. Salary, £150 per annum.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

FRASER, D. H., M.A., M.D., B.C.Camb., Medical Officer of the St. Marylebone Parish Workhouse.

EDINBURGH ROYAL INFIRMARY.—The following appointments have been made:—Resident Physician: John McGarrity, M.B., Ch.B., to Professor Russell. Resident Surgeon: John Bennet (final year student) to Surgical Out-patient Department.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

DAVIDSON.—On the 22nd December, 1915, at Keith House, Bicester Road, Aylesbury, Bucks, the wife of Norman Davidson, F.R.C.S.E., Lieutenant R.A.M.C.—a son.

ROSEWARNE.—On November 2nd, 1915, at 16, St. Stephen's Road, Bow, London, the wife of D. D. Rosewarne, Lieut. R.A.M.C., of a son.

DEATH.

WORSLEY.—On December 23rd, 1915, at "Heath Royd," Coventry, after a short illness, Carrie, the dearly loved wife of Reginald Carmichael Worsley, M.R.C.S.Eng., L.R.C.P.Lond., aged 49.

DIARY FOR THE WEEK.

TUESDAY.

THE RÖNTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, 8.15 p.m.—The President, Mr. J. H. Gardiner, F.C.S.: Some Observations upon the Occurrence of Uranium. Demonstrations of apparatus.

POST-GRADUATE COURSES AND LECTURES.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

MEDICAL STUDENTS AND MILITARY TRAINING.

We are told that some medical students in the fourth and fifth years are in doubt whether they ought to attest. As has very frequently been stated, it is officially recognized that their duty is to finish their studies, and to obtain a qualification at the earliest possible date, so as to be in a position to take a commission in the Royal Army Medical Corps. Any student who is in a position of doubt or difficulty should consult the dean of his medical school; but the point is again made plain, and the obligation on them to obtain military training during the period clearly stated, in the following letter received by the Senate of the University of London at its meeting on December 15th. It has been published in the *London University Gazette* and circulated to the medical schools of the University.

7th November, 1915.

An impression appears to have obtained credence among medical students in their fourth and fifth years that it is unnecessary for them to undergo any military training while engaged in the study of their profession. This view has doubtless arisen because, owing to the great demand for medical men and the shortage of supply, many who have received no military training have been given commissions in the Royal Army Medical Corps.

From the experience of the past year it has been clearly shown that men who have had previous military training are of infinitely greater value as officers of the Royal Army Medical Corps than those who have had no military experience.

Students in their fourth and fifth years have been advised that it is best for them to continue their medical studies in order to qualify for commissions in the Royal Army Medical Corps, but this does not in the least exempt them from using all the means available for obtaining military instruction.

The medical units of the various Officers' Training Corps are organized so that men may obtain this instruction without disturbance of their medical studies, and all senior students, who have not already done so, are strongly urged to become cadets in the medical units of their University Officers' Training Corps.

M. W. H. RUSSELL, Surgeon-General,
for Director-General, Army Medical Service.

CIRCULAR BY INSURANCE COMMISSIONERS.

The Commissioners have recently issued to Insurance Committees in England and Wales a circular (Memo. 219 I.C.) dealing with the relations that should exist between Insurance Committees and the Medical War Committees and Panel Committees in the task of obtaining the necessary supply of medical men for the service of the army, and co-ordinating the needs of the army and those of the civil population so as to avoid any undue depletion of the medical service of particular areas. A copy of the circular of the Central Medical War Committee on the co-ordination of recruiting for the naval and military medical services and the needs of the civilian population, published in the SUPPLEMENT of December 18th, p. 221, is enclosed with their circular by the Commissioners for the information of the Insurance Committees.

The Commissioners point out that Insurance Committees are the authorities primarily responsible for the maintaining of the medical service of the insured, but express their anxiety that no unnecessary obstacle should be placed in the way of panel practitioners joining the army where they can be spared from their civil duties.

The Commissioners claim to have taken a very important step towards securing to an absent practitioner the goodwill of his panel practice by the Regulation recently made with regard to the transfer of insured persons from doctors' lists. But the greater the facilities afforded to practitioners desiring to join the army, the greater, they consider, becomes the necessity for guarding against any undue depletion of the panel in particular areas. It is possible that the needs of the medical service of the army may lead in the future to the necessity for some modification of the full contractual liability of the doctors on the panel, but for the present that liability exists, and it is only by making clear and definite arrangements for its fulfilment during his absence that a doctor who goes on military service can remain on the panel and have the remuneration accruing under his agreement secured to him. The Commissioners think it essential that the arrangements made should be submitted to the Insurance Committees for approval before a doctor undertakes military service, and state that failure to do this has already in some cases put committees to inconvenience and trouble. The Commissioners advise that when a request to be released for military service is received from a panel doctor the Committee should be satisfied on two main points before giving its consent: first, that there is no likelihood that the absence of the doctor will make the panel service less efficient, and, secondly, that satisfactory arrangements are made for carrying out the absentee's duties. Where the Committee, having consulted the Panel Committee, is not satisfied on either of these two points, it must withhold its consent, pending a consultation with the Local Medical War Committee and possibly a reference to the Central Medical War Committee or the Commissioners. To meet possible cases where questions may arise as to the proper discharge of his duties by the deputy or deputies of an absent practitioner, it is suggested that the departing practitioner should give authority to the Panel Committee to amend his arrangements if they should prove unsatisfactory. The Commissioners entirely concur with the suggestion of the Central Medical War Committee that there should be the fullest co-operation between the local Medical War Committees and the Panel Committees. On the Panel Committees, by virtue of their special knowledge, special responsibility falls. At some future date it may be necessary to call for some sacrifices from the community at large which would be incompatible with the maintenance of the panel standard, but that position has not yet been reached, and the Panel Committees are asked to give timely warning not at the point when the withdrawal of one or two more practitioners would bring the service over the verge or even to the verge of inadequacy, but while still an appreciable margin remains above that which the Panel Committee regards as the minimum necessary for the maintenance of an adequate service in every part of the area which it represents. The Commissioners suggest that, in order to avoid delay in meeting contingencies, the Insurance Committees should delegate authority to their chairman or clerks, or both jointly, and the Panel Committee might be well advised to do the same.

The Commissioners finally express their readiness to advise further on any difficulties that may arise, and to consult with the Central Medical War Committee.

Association Notices.

MEETING OF COUNCIL.

The next Meeting of Council will be held on Wednesday, January 26th, in the Council Room, 429, Strand, London, W.C. The hour will be notified later.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 1st, 1916.

INSURANCE.

SETTLEMENT OF 1914 ACCOUNTS.

THE following communication was addressed by the British Medical Association to the Commissioners concerning the above question on December 7th last:

Sir,

I am instructed by the Executive Subcommittee of the Insurance Acts Committee to state that many representations continue to be made as regards the delay of the settlement of the accounts of panel practitioners for the year 1914, and the Subcommittee fears that unless something is done very soon to meet these very legitimate complaints, serious disaffection will result. The Insurance Acts Committee has already informed Panel Committees of its previous inquiries of the Commissioners as to this point, and of your replies. But panel practitioners are evidently disinclined to accept much longer the statement that moneys due "as soon as may be after the expiration of a year" can on any reasonable grounds be withheld until the end of the year following, and with no immediate prospect of settlement even then.

The Subcommittee would be glad to know whether there is any reason why another payment on account should not be made. There seems nothing in Regulation 37 to prevent this being done, and it might be possible by means of such a payment on account to make such payments as would be very useful indeed to many panel practitioners. At the same time, however, it is important that as soon as possible some definite statement should be made as to the probable date of the final settlement. If this final settlement is likely to be long deferred the Subcommittee will be glad to know whether the Commissioners have considered the possibility or desirability of an emergency settlement being made with panel practitioners such as was made with panel chemists for the year 1914. If the Commissioners consider an emergency settlement to be within the range of practical politics and to be likely to give general satisfaction, the Association would be glad to have as full information as possible as to whether such an emergency settlement can be offered, and if so, the basis on which it could be made.

I am, yours faithfully,

ALFRED COX,
Medical Secretary.

A reply was received, dated December 30th, 1915, forwarding a copy of the circular letter which had been issued by the English Commissioners on December 2nd, 1915, to all English Insurance Committees, with reference to the final settlement of the 1914 accounts of insurance practitioners.

I.C.L. 143.

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.

2nd December, 1915.

Settlement with doctors, etc., in respect of 1914.

Sir,

I am directed by the National Health Insurance Commission (England) to inform you that they have had again under their consideration the question of the practicability of effecting a settlement at an early date with doctors, etc., in respect of 1914.

The settlement for that year has, as the Committee are aware, been necessarily postponed owing to (*inter alia*) the unavoidable delay in the issue by approved societies of notifications of the enlistment of their members. From an examination, however, of the return recently furnished by committees in response to the Commissioners' circular letter, I.C.L. 137, the Commissioners are satisfied that the 1914 counts of the Index Register have now been adjusted in respect of the notifications already received to an extent which renders it unnecessary to defer any longer a settlement in respect of that year, so far as concerns the apportionment between committees of the General Medical Benefit Fund. As, moreover, the Commissioners have now been placed in a position to overcome the difficulties which have hitherto precluded them from completing the computation of the amount of that Fund, it is proposed to proceed forthwith with a final settlement for 1914, upon the ordinary lines; and as this will enable committees to make final payments to doctors of any balances outstanding under their agreements, it will not be necessary to have recourse to any expedient in the nature of an emergency settlement with doctors such as it might otherwise have been felt incumbent to entertain.

For the purpose of the ordinary settlement it will of course be necessary, as hitherto, to apportion, in accordance with the Regulations, the Committee's Medical Benefit Credit amongst the various funds of the Committee—Practitioners' Fund, Institutions Fund, Special Arrangements Fund, etc. As in the case of the 1913 apportionment, the Commissioners will be prepared to undertake the necessary calculations if the Committee so desire. To enable the Commissioners to do so, however, they will require to have certain information. A form has accordingly been proposed (copies of which are enclosed) on which the necessary information may be forwarded, and, if the Committee desire the Commissioners to undertake the apportionment, a copy of the form should be completed and forwarded to the Commissioners as soon as possible. In view of the foregoing, it will no longer be necessary for the Committee to record on Form 142 I.C. notifications of enlistments affecting the count as on October 12th, 1914. A record should, however, still be kept on the form of adjustments which will require to be made in subsequent counts taken prior to the receipt of the notifications.

I am, Sir, your obedient Servant,
(Signed) S. P. VIVIAN.

The Clerk to the Insurance Committee.

IRELAND.

MEDICAL CERTIFICATION OF SICKNESS BENEFITS.

WE are informed that practically all the doctors in Ireland concerned with the treatment of insured persons have accepted the agreement arranged with the Insurance Commissioners for the certification of sickness benefits.

At a meeting of the practitioners of co. Wexford, when the agreement was accepted, a cordial vote of thanks was adopted to the honorary secretary, Dr. W. W. Murphy (Coolgreany).

At a meeting of the Connaught Branch at Galway on December 21st, the Irish Medical Secretary of the British Medical Association (Dr. Hennessy) attended and explained the agreement, which was accepted by the meeting. A vote of thanks to Dr. Hennessy was accorded. The ethical rules were adopted at this meeting.

LOCAL MEDICAL AND PANEL COMMITTEES.

BIRMINGHAM.

At a meeting of the Panel Committee held on December 14th a report was presented by the Pharmacopoeia Subcommittee on the scrutiny of prescriptions issued during the first quarter of the year. Cases in which unreasonable prescribing was evident were comparatively few and the delinquents were divided into three classes:

1. Those who appeared to be issuing an unnecessary number of prescriptions.
2. Those whose prescriptions in some cases appeared to be excessive in cost.
3. Those whose prescriptions showed evident extravagance.

Appropriate letters were written to those in classes (1) and (2) drawing their attention to the various methods in which economy could without interference with efficiency be practised, and those in class (3) were invited to interview the members of the Subcommittee. In all cases gratitude was expressed that attention had been drawn to apparent extravagance.

INSURANCE COMMITTEES.

LONDON.

Commercial Drug Tariff.—At its meeting on December 16th the Committee considered the arrangements for the pricing, etc., of prescriptions in accordance with the new regulations for 1916. It was stated that a large additional establishment expenditure would be necessary. The proposals were very strongly criticized by various members, who denounced the "rushing" methods of the Commissioners, and the motion that the report be received was negated by a large majority. Some action had to be taken, however, in view of the fact that the new medical regulations were shortly becoming operative, and a special subcommittee was appointed, representative of the various interests concerned, to consider the arrangements for pricing and checking prescriptions.

Extravagant Prescribing.—It was announced that as under the new arrangements the chemists would no longer be affected by the results of any extravagance on the part of practitioners in their prescribing, the Pharmaceutical Committee would cease to discharge its functions in this respect. The Panel Committee would continue to be responsible for investigating and, in co-operation with the Insurance Committee, controlling extravagant prescribing.

Panel Practitioners and War Service.—Dr. H. H. MILLS reported that, in spite of enlistments, the number of

insured persons remained at a very high figure, and it was becoming a vital necessity, in considering the recruiting of medical men, to safeguard the requirements of the civil population. Mr. HANDEL BOOTH stated that complaints had been made by insured persons with regard to the locumtenents, who in some cases, when approached on the matter, would reply that they were responsible only to the absent practitioner. The practitioners who had already undertaken military service were responsible for an aggregate of some 10,000 insured persons. On the motion of Dr. MILLS, a subcommittee was appointed to consider the position of panel practitioners who undertook military service and the arrangements made by them with deputies.

INSURANCE ACT IN PARLIAMENT.

TUBERCULOSIS TREATMENT.

IN reply to a question by Sir E. Cornwall as to the amount contributed under the Insurance Act in respect of the treatment of tuberculosis cases in the four years ending March, 1915, Mr. Roberts has made the following printed statement: Subject to some slight adjustment, the amount available under Section 16 (2) of the National Insurance Act, 1911, in respect of the period 15th July, 1912, to 31st December, 1914, for defraying the expenses of sanatorium benefit in the United Kingdom is £2,125,000. Further, a sanatorium benefit grant of £100,000 was voted in the Supplementary Estimates for 1914-15, £50,000 being paid into the special account for credit to the four National Health Insurance Funds, and the balance being revoted in the Estimates for 1915-16; and may I add that these figures do not include sums of £125,000, £180,000, £480,000, and £385,000 voted in the Estimates (Original and Supplementary) for 1913-14, and in the Estimates for 1914-15 and 1915-16 respectively, as provision for statutory grants under Section 17 of the National Insurance Act, 1911, for the special grants towards the cost of schemes undertaken by local authorities (or combinations of local authorities), with the approval of the departments administering the grants, for the treatment of tuberculosis generally.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following announcements are made by the Admiralty: Surgeon H. C. Devas to the *Victory*, additional, for disposal. Temporary Surgeons A. G. Simmons to the *Victory*, additional, for Haslar Hospital; L. S. Fry to the *Bellerophon*; G. MacL. Blair, M.B., to the *Huke*; T. J. T. Wilnot, M.D., to the *Pembroke*; G. W. M. Findlay, M.B., and H. W. Scott to the *Pembroke*, additional, for Chatham Hospital; J. Pratt, to the *Victory*, additional, for disposal; G. Linfo, M.B., to the *Conqueror*; R. K. Shaw, M.B., to the *Wulfrey*, additional, to be lent for duty at R.N.A.S. Training Establishment; T. W. Drummond to the *Dougal*; J. T. E. Evans to the *Pembroke*, additional, for disposal; E. G. B. Carpenter to the *Victory*, additional, for Portland Hospital; W. McH. Binning to the *Pembroke*, additional, for Chatham Hospital; R. K. Kerr, M.B., to the *Victory*, additional, for Haslar Hospital. To be temporary Surgeons: D. M. P. Whitcombe, M.B., E. P. L. Hughes, W. M. Binning, R. R. Kerr, M.B., R. Arken, M.B.

ROYAL NAVAL RESERVE.

Surgeon-probationers A. T. Harrison, E. G. T. Holden, W. Michael, J. C. Sleight, T. Anderson, D. T. Watt, A. R. Forbes, A. C. Fowler, D. M. Blair, and A. C. Lindsay to the *Victory*, additional, for Royal Naval Hospital, Haslar.

ROYAL NAVAL VOLUNTEER RESERVE.

Temporary and honorary Captain W. P. S. Branson, M.D., F.R.C.P.,

to be temporary honorary Major whilst serving with No. 1 British Red Cross (Duchess of Westminster's) Hospital.

Temporary Lieutenants to be temporary Captains: C. G. H. Moore, M.B., G. W. Twigg, M.D., J. T. McCullagh, M.B., J. D. Yule, M.B., F. A. R. Hacker, J. Keenan, F.R.C.S.I.

F. R. Seymour, M.D., to be temporary Captain.

Temporary Lieutenant R. H. R. McKean is dismissed the service by sentence of a general court-martial.

Temporary Lieutenant N. E. M. Home-Hay, M.B., relinquishes his commission on account of ill health.

Temporary Lieutenants relinquishing their commissions: A. R. Douglas, J. Hegarty, H. V. Swindle, W. W. Woods, M.B., T. Perrin, M.D., F.R.C.S., G. W. Clark, M.B., D. H. Collingham, B. Francis, M.D.

The date on which the undermentioned temporary Lieutenants relinquished their commissions is November 1st, 1915, and not as stated in the *Gazette* of December 4th, 1915: R. W. Davies, M.B., A. S. Allan, M.B.

To be temporary Lieutenants: G. H. Simpson, A. T. Thompson, M.B., T. S. Brook, A. Barratt, M.B., J. A. Harper, M.B., J. Appleyard, C. H. Mossop, J. N. J. Hartley, M.B., B. P. Campbell, M.D., F.R.C.S. Edin., C. G. H. Campbell, M.B., C. B. Jones, M.B., R. Sinclair, M.B., W. Leslie, M.B., M. W. Talbot, M.B., J. P. Lambie, M.B., S. D. Bridge, F. W. Bartlett, A. O. Evans, M.B., P. Davies, M.B., J. G. Hell, M.B., C. Berry, F. H. Young, A. P. Fry, M.B., E. Purcell, R. C. Lowe, M.B., F. M. Bishop, J. A. Venning, M.B., R. A. MacNeill, M.B., R. T. Slinger, M.B., F.R.C.S., H. Mather, W. A. Berry, M.D., W. A. Paterson, M.B., J. C. Wilson, M.B., J. C. Wadmore, W. H. Broughton, G. B. Salmund, M.B., R. B. Taylor, M.B., J. T. Griffiths, D. C. Adam, M.B., P. D. Scott, A. E. Clark, M.B., H. A. Watney, M.B., W. B. Loveless, G. Ellis, C. J. Pentland, M.D., J. T. O'Boyle, T. B. Lloyd, M.B., G. E. Potter, V. K. Sadler, D. I. Anderson, M.B., H. J. Cooper, M.B., W. T. Brown, M.B., G. Kee, E. R. Grieverson, M.B., W. J. Spearling, G. A. MacFarland, J. C. Mead, M.B., F.R.C.S., J. M. Hermon, M.D., C. D. Holdsworth, M.D., H. J. Keane, M.D., C. W. J. Dunlop, W. J. Mel, Baird, M.B., W. H. Hodgson, M.B., J. C. Forbes, H. M. Mills, M.B., E. W. Kirk, M.B., R. M. Lang, M.B., J. W. Hilliard, M.D., R. C. Cooke, J. W. Harvey.

To be temporary honorary Lieutenants: E. J. Clark, M.B., C. F. MacLachlan, M.B., R. B. Eadie, M.B., T. C. Bowie, M.B., B. Graves, W. H. Marshall.

To be temporary Quartermasters, with the honorary rank of Lieutenant: C. F. Tyson, H. Miller, E. G. J. Curling, T. F. Evans, F. L. Harsant, W. Richardson, S. Francis, W. Pearson, N. H. Brown, G. F. N. Taylor, J. Dods, E. A. Beattie, J. H. Turner, H. Maffey, T. H. Griggs, A. Seates, J. Stone, A. Willden, J. Davis, R. G. Johnston, J. Flint.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

East Anglian Field Ambulance.—Lieutenant A. E. Tait, M.B., to be Captain.

East Lancashire Field Ambulance.—Major T. Holt, M.D., from *West Lancashire Field Ambulance*, to be Major.

Highland Casualty Clearing Station.—Lieutenants J. A. Innes, M.B., and J. Dow, M.B., to be Captains.

Highland Field Ambulance.—Lieutenant A. B. Jamieson, M.B., to be Captain.

Home Counties Divisional Sanitary Section.—F. T. H. Wood, M.B., to be Lieutenant.

London (City of London) General Hospital.—Quartermaster-Sergeant F. J. E. Carter to be Quartermaster, with the honorary rank of Lieutenant.

London (City of London) Sanitary Company.—H. Duguid, M.B., to be Lieutenant.

London General Hospital.—Lieutenants L. L. Preston, M.B., and C. H. J. Fagan, to be Captains. To be Captains, whose services will be available on mobilization: C. Goulesbrough, M.B., J. P. Hedley, Z. Mennell, M.B., E. M. Corner, M.B., F.R.C.S., J. E. Adams, M.B., F.R.C.S., M. A. Cassidy, H. J. Marriage, M.B., F.R.C.S., E. F. Buzzard, M.B., H. B. Weir, E. W. Hedley, M.D. To be Lieutenants: H. M. Harwood, H. A. Philpot, M.D.

London Sanitary Company.—Lieutenants F. G. Rose and A. G. Whitfield to be Captains. The date of appointment of Lieutenant B. Williamson is November 15th, 1915, and not as stated in the *Gazette* of November 26th, 1915. The date of the appointment of Lieutenant M. S. Briggs is December 4th, 1915, and not as stated in the *Gazette* of December 11th, 1915.

Northern General Hospital.—Lieutenant-Colonel H. Littlewood, F.R.C.S., from the list of officers whose services are available on mobilization, is temporarily placed on the permanent personnel. Lieutenant J. A. Menzies, M.D., to be Captain.

Gibbs, from Attached to Units other than Medical Units, to be Lieutenant. Lieutenant H. R. Gibbs to be Captain. Quartermaster and honorary Lieutenant G. D. C. Stokes resigns his commission.

Attached to Units other than Medical Units.—The date of appointment of Major A. B. Harris, M.B., is October 2nd, 1915, and not as stated in the *Gazette* of November 2nd, 1915. Captain W. G. Macfee to be Major. Lieutenants G. S. Hughes, M.B., F.R.C.S., and W. H. Morrison, M.B., to be Captains. F. M. Hughes, E. M. de Jong, and J. P. Clarke to be Lieutenants.

TERRITORIAL FORCE RESERVE.

ROYAL ARMY MEDICAL CORPS.

Major (temporary Lieutenant-Colonel) W. T. Blackledge, M.B., from West Lancashire Field Ambulance, to be Major.
General List.—The date on which Captain H. J. Pechell relinquished his commission on appointment to R.A.M.C. is August 2nd, 1915, and not as stated in the *Gazette* of October 1st, 1915. H. Nash to be Lieutenant.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In the ninety-six largest English towns 6,960 births and 5,462 deaths were registered during the week ended Saturday, December 18th, 1915. The annual rate of mortality in these towns, which had been 16.7, 18.5, and 17.1 per 1,000 in the three preceding weeks, fell to 15.7 per 1,000 in the week under notice. In London the death-rate was equal to 16.3, while among the ninety-five other large towns it ranged from 5.1 in Edmonton, 6.6 in Coventry, 6.9 in Swindon, 8.1 in Willesden and in Swansea, and 8.2 in Hornsey, to 20.0 in Liverpool, 20.1 in Dudley and in Blackpool, 20.6 in Bootle, 21.5 in Sunderland, and 21.7 in Leicester. Measles caused a death-rate of 1.1 in Bristol, 1.3 in Swansea and in Grimsby, 1.8 in Bury, 1.9 in Burnley, 2.0 in Swindon, 3.8 in Leicester, and 4.1 in Gloucester, and whooping-cough of 1.1 in West Ham and 1.3 in Gateshead. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 36, or 0.7 per cent., of the total deaths were not certified by a registered medical practitioner or by a coroner; of this number, 9 were recorded in Birmingham, 6 in Liverpool, and 2 each in Bootle, St. Helens, Preston, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,927, 2,811, and 2,738 at the end of the three preceding weeks, further fell to 2,582 on Saturday, December 18th; 245 new cases were admitted during the week, against 318, 278, and 282 in the three preceding weeks.

In the ninety-six largest English towns 6,019 births and 5,183 deaths were registered during the week ended Saturday, December 25th, 1915. The annual rate of mortality in these towns, which had been 18.5, 17.1, and 15.7 per 1,000 in the three preceding weeks, further fell to 14.9 per 1,000 in the week under notice. In London the death-rate was equal to 15.5, while among the ninety-five other large towns it ranged from 5.7 in Ilford, 6.8 in Enfield, 7.3 in Acton, 7.4 in Leyton, 7.7 in Barnsley, and 7.9 in Wimbledon, to 21.1 in West Hartlepool, 21.2 in Wolverhampton and Dewsbury, 21.6 in Stoke-on-Trent, 21.8 in West Bromwich, 22.7 in Middlesbrough, and 23.4 in Lincoln. Measles caused a death rate of 2.0 in Ipswich, in Swindon and in Leicester, 2.1 in Gloucester, and 3.8 in Burnley; whooping-cough of 2.6 in Lincoln; and diphtheria of 1.8 in Coventry. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 50, or 1.0 per cent., of the total deaths were not certified by a registered medical practitioner or by a coroner; of this number 19 were recorded in Birmingham, 7 in Liverpool, and 2 each in Stoke-on-Trent, Southend, Southport, Preston, Bradford, Darlington, South Shields, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,811, 2,738, and 2,582, at the end of the three preceding weeks, further declined to 2,464 on Saturday, December 25th, 1915; 206 new cases were admitted during the week, against 278, 282, and 245 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 995 births and 841 deaths were registered during the week ended Saturday, December 11th, 1915. The annual rate of mortality in these towns, which had been 17.6, 22.7, and 22.4 per 1,000 in the three preceding weeks, fell to 18.7 in the week under notice, but was 1.6 per 1,000 above the rate in the ninety-six large English towns. Among the several towns the death-rate ranged from 10.3 in Perth, 12.4 in Ayr, and 12.7 in Kilmarnock, to 20.7 in Leith, 23.6 in Coatbridge, and 27.4 in Greenock. The mortality from the principal infective diseases averaged 1.7 per 1,000, and was highest in Greenock and Hamilton. The 401 deaths from all causes in Glasgow included 13 from scarlet fever, 8 from measles, 7 from diphtheria, 6 from infantile diarrhoea, and 1 from whooping-cough. Seven deaths from diphtheria, 3 from measles, and 3 from scarlet fever were recorded in Edinburgh; 6 deaths from measles in Hamilton and 5 in Greenock; and from scarlet fever, 2 deaths in Aberdeen.

In the sixteen largest Scottish towns 990 births and 888 deaths were registered during the week ended Saturday, December 18th, 1915. The annual rate of mortality in these towns, which had been 22.7, 22.4, and 18.7 per 1,000 in the three preceding weeks, rose to 19.7 in the week under notice, and was 4.0 per 1,000 above that recorded in the ninety-six large English towns. Among the several towns the death-rate ranged from 12.7 in Kilmarnock, 12.9 in Clydebank, and 13.8 in Motherwell, to 26.6 in Perth, 28.0 in Greenock, and 28.9 in Falkirk. The mortality from the principal infective diseases averaged 1.4 per 1,000, and was highest in Greenock and Hamilton. The 394 deaths from all causes in Glasgow included 6 from scarlet fever, 5 from measles, 3 from whooping-cough, 3 from infantile diarrhoea, and 1 from diphtheria. Six deaths from measles and 4 from diphtheria were recorded in Edinburgh; 3 deaths from scarlet fever and 3 from diphtheria in Aberdeen; and from measles, 6 deaths in Greenock and 5 in Hamilton.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, December 18th, 1915, 508 births and 516 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 494 births and 464 deaths in the preceding period. These deaths represent a mortality of 22.2 per 1,000 of the aggregate population in the districts in question, as against 20.0 per 1,000 in the previous period. The mortality in these Irish areas was therefore 6.5 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 21.8 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 24.9 (as against an average of 23.7 for the previous four weeks), in Dublin city 27.3 (as against 25.2), in Belfast 23.0 (as against 20.1), in Cork 23.8 (as against 22.1), in Londonderry 21.5 (as against 18.0), in Limerick 9.5 (as against 14.9), and in Waterford 22.8 (as against 20.4). The zymotic death-rate was 2.0 as against 1.6 in the preceding period.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

THE HALF-YEARLY INDEXES, 1915.

THE usual half-yearly indexes to the JOURNAL, to the EPITOME, and to the SUPPLEMENT have been prepared and printed. Any member or subscriber who desires to have one or all three of the indexes can obtain a copy of what he wants, post free, by sending a post-card notifying his desire to the Financial Secretary and Business Manager, British Medical Association, 429, Strand, W.C.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

MEDICAL STUDENTS AND MILITARY SERVICE.

THE President of the General Medical Council has received from the War Office the following intimations relating to medical students:

- I. Students who at or before the close of the present winter session will be qualified for entry to one of the examinations for third-year students in medicine, and duly enter for the examination for which they are studying, will not be attested until after its conclusion; and if they are successful will be included in the class of fourth-year students (under Lord Derby's scheme).
- II. Directions have been sent to all Commands in England and Scotland, instructing them to inform military representatives [on recruiting tribunals] that in cases where students, attested in Army Reserve, Section B, appeal for their calling-up to be postponed until after they have taken an examination, this request may be granted provided the examination will be held before March 31st, 1916.

The President will be grateful if steps are taken by the authorities of each medical school to call attention to these official intimations, which have special reference to students of the first, second, and third years of the professional course.

DONALD MACALISTER,
President.

General Council of Medical Education
and Registration of the United Kingdom,
44, Hallam Street, London, W.1.
January 10th, 1916.

THE LOCAL GOVERNMENT BOARD IN IRELAND.

THE Local Government Board (Ireland) wrote recently to the Swinford Board of Guardians acknowledging replies to queries respecting Dr. Martin Sweeney, recently elected by the board of guardians to the medical officership of the Lowpark Dispensary District, and drawing attention to its circular letter of December 26th, 1915, and to suggest, in view of the fact that Dr. Sweeney is 27 years of age, and qualified in that respect for employment with the forces of the Crown, that the guardians might endeavour to make some temporary arrangement whereby Dr. Sweeney would be enabled to volunteer for active service until the termination of the war. The guardians could keep the post open until Dr. Sweeney's return, and the Board would then accord their sanction to his permanent appointment. The guardians made an order informing the Local Govern-

ment Board that the appointment of Dr. Sweeney was made before the issue of the circular referred to, and requiring them to sanction his appointment at once, as the Lowpark Dispensary District was one of the largest in the union and had a population of over 9,000, and a temporary arrangement for the discharge of the duties was therefore not desirable. Owing to the number of Irish doctors who have, since the war broke out, joined the R.A.M.C., several large dispensary districts have been left without medical officers.

PRACTICES OF MEN ACCEPTING COMMISSIONS.

UNDER the auspices of the City Division of the British Medical Association a meeting of medical practitioners resident in the boroughs of Stoke Newington, Hackney, Bethnal Green, Shoreditch, Finsbury, and City was held at the Hackney Town Hall on January 7th. Dr. Durno, chairman of the Division, who presided, said that the meeting was delayed so that every medical man might have the opportunity of attending. The following resolutions were carried:

1. That in case of men who join or rejoin the R.A.M.C. after the date of this meeting the following fees should be paid to men who do their work at home: (1) In panel cases 50 per cent. should go to the man who does the work. (2) In private practice, if the dispensing is done by the representative, he should receive three-fifths of the fees. (3) All midwifery fees should be paid in full to the representative. All the above to be subject to private arrangements made by individuals. Territorials to be treated as other volunteers.
2. That the War Emergency Committee should conduct any business on the lines of this meeting.

THE NEW LIGHTING RESTRICTIONS.

THE new order as to lights on vehicles, made by the Home Secretary under the Defence of the Realm Regulations, came into force on January 10th.

It extends to the whole country outside the metropolitan area provisions which already applied in many areas, fixing the lighting-up time for all vehicles as half an hour after sunset, and requiring all vehicles to carry a red lamp in the rear. A separate lamp at the rear is required for all except hand vehicles. The last requirement does not come into force until February 10th. These regulations are considered necessary for the public safety, because of the reduction of street lighting and the general increase of naval and military motor traffic on the roads at night. The remainder of the order deals with the reduction of lights in those areas where bright lights might serve to guide hostile aircraft (Part II). Lists of these areas are given in a schedule. The order defines the restrictions, and makes them uniform in all the areas affected. In them the use of headlights is prohibited, but sidelights are allowed of sufficient brightness to afford a reasonable driving light for ordinary speeds. It is found that sidelights which can be allowed on country roads are a source of danger in towns where the large number of lighted vehicles makes the lights of the main streets visible to aircraft, and it has therefore been necessary (Part III) to require sidelights to be further reduced in large towns in the eastern counties set out in a second schedule. The order prescribes the standards of maximum size and power, and method of obscuring different types of lamps.

A number of letters have been received at the offices of the British Medical Association pointing out the inconveniences and dangers which may arise owing to the fact that it is necessary for medical practitioners to go about the country at night, and the following correspondence

has passed between the British Medical Association and the Home Office:

December 31st, 1915.

Sir,

Representations have been made to this Association from various quarters as to the great inconvenience and possible danger that will be caused by the new lighting restrictions which come into force on January 10th when applied to the motor cars of doctors. Practitioners in rural areas state that under the new order it will be almost impossible for them to get about in the country at night, and they have asked that the British Medical Association should make representations in favour of some relaxation of the order being made as regards the motor cars of doctors when in use for professional purposes. I shall be glad to know whether there is any possibility of such a relaxation. The difficulties as regards procedure are obvious, but if, without prejudice to public safety, some arrangement could be made which would enable rural doctors to get about the country at night time with expedition and with safety to themselves and the public, it would clearly be to the advantage of their patients as well as to the members of the profession concerned who are at present being very seriously overworked and harassed.

I am, yours faithfully,

ALFRED COX.

Medical Secretary.

The Secretary of State,
Home Office, Whitehall, S.W.

300,000,61.

Home Office, Whitehall,
10th January, 1916.

Sir,

With reference to your letter of the 31st December on the subject of the Lights (Vehicles) Order, I am directed by the Secretary of State to say that the Order was framed with special regard to the needs of medical practitioners and others who have to travel by road at night; and, though it prohibits the use of headlights in certain parts of the country, it permits the use on country roads of side lamps giving a brighter light than has been allowed in many areas under the existing Orders, and will be found to allow sufficient light for safe driving at ordinary speeds, even on narrow and winding roads.

The restrictions under Part III of the Order apply only in certain towns where sidelights of the maximum brightness allowed by Part II of the Order are unnecessary, and might, in the event of the approach of hostile aircraft, be a source of danger.

In some cases motorists may be unable to obtain the full illumination the Order allows with the lamps they already possess, but, on the whole, a better driving light is permitted under this Order than under the Orders previously in force.

If there is at first a difficulty in complying with the requirements of the Order on account of local shortages in the supply of lamps, reasonable latitude will be allowed by the police, but the Secretary of State regrets he cannot authorize any general exceptions from its provisions.

I am, Sir, your obedient Servant,
EDWARD TROUP.

The Medical Secretary,
The British Medical Association,
429, Strand, W.C.

INSURANCE.

THE WORK OF PANEL PRACTITIONERS.

The Medical Secretary of the British Medical Association, 429, Strand, would be glad to have from panel practitioners a note as to their work in 1915 stating:

- Number of insured persons on his list.
- " of patients seen.
- " of visits.
- " of surgery attendances.

Dr. Legge Pauley (Pulham Market, Norfolk) has forwarded us the following figures of his work under the Insurance Act during 1915:

	1914.	1915.
Average number of patients on list	750	700
Record cards opened for	354	348
Number of attendances	3,100	2,850

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

The War and the Position of Panel Practice.—At the meeting of the London Panel Committee on December 21st, 1915, Dr. H. J. CARDALE reported that in the course of the interview a deputation had had with the Central Medical War Committee the Central Committee stated that it might be necessary to approach the Government with a view to a modification of the requirements on practitioners under agreement with Insurance Committees. In reply to a suggestion from the Central Committee that the percentage of non-panel men in London who were serving with His Majesty's Forces was higher than that of panel men so serving, the deputation pointed out that the figures mentioned in respect of non-panel men included men who

had never been in practice, but who had left appointments or gone straight from hospitals. It was suggested by the Central Committee that the formation of "clinics" in certain congested areas would be useful from the point of view both of doctors and patients. The Central Committee took the opportunity also of pressing the desirability of close co-operation between Panel Committees and the British Medical Association, and with regard to the representation of panel practitioners on the Central Committee, pointed out that it was a national committee, and that the London Panel Committee would be better advised to seek representation on the War Emergency Committee of the Metropolitan Counties Branch. Dr. Cowie, while admitting that the military requirements must have precedence; doubted whether the authorities were making full use of such material as they had already, and mentioned that he had met men home from different fronts who said that they had virtually been doing nothing, and when he asked whether he should join up, they replied that he should do so by all means if he wanted a holiday. He trusted that the Central Committee would respond to the appeal to widen its representation. Dr. B. A. RICHMOND said that the Central Committee had asked the War Office to refuse applications for commissions from practitioners in such boroughs as Poplar, Stepney, Shoreditch, and Finsbury, until the Committee had been consulted. If all the medical men of military age were to join the forces there would be left in

Shoreditch	1 medical man to 18,000 population.
Bethnal Green	" " 12,000 "
Stepney	" " 9,000 "
Poplar	" " 8,000 "
Finsbury	" " 6,700 "

Dr. J. GALLOWAY, in reply to a question as to the origin of the Central War Committee, said that actually it had been evolved from the British Medical Association, and was subsequently enlarged and made to include every medical interest. Although the Committee wanted one more member the place could hardly in justice be allocated to a representative of one particular panel committee. The panel point of view was very ably represented, and panel practice would be amply safeguarded.

A large amount of the business on the Panel Committee's agenda fell through owing to the absence of a quorum.

WEST RIDING OF YORKSHIRE.

At a meeting of the Local Medical and Panel Committees on November 3rd it was decided to accept the proposed alterations set out in Memorandum 217/I.C., relating to the arrangements for the administration of medical benefit for 1916. It was also decided to discontinue the practice of using the formula "Rep. mist." and to call the attention of the Commissioners to the great discontent existing among panel practitioners in the area owing to the prolonged delay arising from the non-payment of the balance due to them for the year 1914.

YORK.

At a meeting of the Local Medical and Panel Committees on December 22nd, 1915, it was reported that the Pharmaceutical Committee had appealed to the Commissioners with reference to the decision of the Panel Committee against the use of aqua destillata by the chemists in all cases, and that the Commissioners had upheld the Panel Committee's decision.

It was decided to support the suggested payment of the travelling expenses of members of Panel Committees out of the statutory grant from the Medical Benefit Fund.

A letter was read from the Commissioners to the Clerk of the North Riding Insurance Committee supporting the contention of the York Insurance Committee that the treatment afforded to insured persons resident in the Scarborough Cottage Hospital cannot be regarded as given under the Insurance Act.

It was decided to nominate Dr. Lyth as one of the representatives of the medical practitioners on the York Insurance Committee, vice Dr. Craig on military service.

COUNTY OF LANARK.

At a meeting of the Local Medical and Panel Committees on December 8th a resolution was adopted placing on record the great loss the Committee had sustained through the lamented death of Dr. Thomson of Uddingston, and its appreciation of his valuable services.

A letter received from the Panel Medico-Political Union was allowed to lie on the table.

It was decided to recommend practitioners to particularize the quantity of wool, rolls of plaster, elastic web bandages, etc., required, and to inform the bureau that all bandages should be priced at the white rate unless grey is specially prescribed.

Meetings of Branches and Divisions.

YORKSHIRE BRANCH:

WAKEFIELD, PONTEFRAC, and CASTLEFORD DIVISION.
At a meeting held on December 23rd, 1915, a local Medical War Committee was appointed.

A resolution with regard to colliery clubs, identical with one previously adopted by the colliery surgeons in the Doncaster district, was carried as follows:

That in the area of this Division a flat rate of 3d. per week per worker should be the minimum rate of pay at all collieries, and no medical practitioner should hold any appointment in connexion with a colliery sick club at a lower rate of remuneration.

Association Notices.

MEETING OF COUNCIL.

The next Meeting of Council will be held on Wednesday, January 26th, in the Council Room, 429, Strand, London, W.C., at 12 noon.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 1st, 1916.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are notified by the Admiralty: Fleet Surgeons J. Martin to the *Vind*; C. H. J. Robinson to the *Gibraltar*, additional, for disposal; L. E. Dartnell to the *Victory*, additional, for disposal. Staff Surgeons G. H. Ross, M.B., to the *Victory*; E. R. T. Worsley to the *Vind*, additional; G. E. Hamilton to the *Vind*, additional, for disposal. Surgeons A. E. P. Cheesman, J. T. D. S. Higgins, M.B., to the *Pembroke*; D. P. H. Pearson to the *Egmont*, additional. Temporary Surgeons H. M. Mather to the *Vind*, J. Cameron, M.B., to the *Egmont*, additional; R. Aiken, M.B., to Chatham Hospital; J. P. Fehly, M.B., to the *Heslar* Hospital; J. C. Sinclair to the *Vind*, additional; W. Taylor, M.B., to Plymouth Hospital; M. Vester, M.B., to the *Victory*, additional, for disposal. To be temporary Surgeons: E. J. Cook, R. K. Ford, J. M. Hiddleston, A. M. Dunlop, M.B., A. B. G. Underwood, M.B.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Probationers H. Poston to the *Lunet*, D. Rankin to the *Hunt*, C. A. Kirtan to *Acheron*, H. H. Baily to the *Ruby*. To be Surgeon Probationers: B. F. Niblock, V. R. O'Connor, S. A. Galley, R. L. Stewart, F. H. Smith, W. F. Attwater.

ARMY MEDICAL SERVICE.

Lieutenant Colonel M. J. Greig to be temporary Colonel whilst Assistant Director of Medical Services of a Division.
Lieutenant Colonels to be temporary Colonels whilst Assistant Directors of Medical Services: F. R. Bushwell, P. Evans, C.M.G., M.B.

ROYAL ARMY MEDICAL CORPS.

C. M. Wemyss, M.B., to be temporary Lieutenant Colonel.
Temporary honorary Major M. H. Gordon, M.D., to be temporary honorary Lieutenant Colonel.
H. W. Bruce, M.D., F.R.C.S., to be temporary Major whilst employed at the Southwark Military Hospital.
Temporary Major A. L. Smith, M.D., relinquishes his commission.
Temporary Captain W. S. Dickie, F.R.C.S., to be temporary Major.
The name of temporary honorary Captain Martin W. Black, M.B., is as now described, and not as stated in the *London Gazette* of November 14th, 1915.
Temporary Lieutenants to be temporary Captains: S. Fleming, M.B., A. P. Woolfright, W. H. Neil, H. Dunsterley, H. E. G. Noyes, M.B., B. J. Meller, R. A. Scames, M.B., W. A. Teap, M.B., C. H. Mills, M.Foulkes, J. N. Griffiths, M.B., C. H. Harbison, M.B., J. H. Wilson, R. W. Wilcocks, M.B., N. I. Sinclair, M.B., W. S. Evans, H. M. Joseph, M.B., T. R. H. Blake, M.B., O. P. N. Pearn, J. A. N. Scott, M.B., J. F. McG. Sloan, M.B., D. B. Williams, H. H. Whaley, M.B., T. I. Bennett, M.B., H. B. Waller, J. J. Dwyer, T. Meagher, M.B., A. H. R. Duncan, W. B. Davy, R. D. Forbes, F.R.C.S., R. H. Lucas, A. W. Rattice, E. Marjoriebanks-Murray, R. B. Roe, F. Garratt, D. D. Josan, M.D., J. E. M. Brown, M.B., L. S. O'Grady, E. B. Mather, M.B., J. A. Cameron, M.B., J. Jardina, M.D., F.R.C.S. Edin., R. S. Miller, M.D., W. McFarlane, M.B., J. T. Kirkland, M.B., H. A. Harris, M. P. Power, H. H. Prentiss, M.B., J. V. Fiddian, J. A. K. Brayton, L. W. Mortimer, C. L. Williams, C. E. Dukes, M.B., J. M. Land, W. H. Alderton, B. R. G. Russell, M.D., W. B. Bullock, M.D., H. R. McIntire, M.D., H. M. Stephenson, A. J. H. Rackham, N. F. Graham, M.B., A. B. Cluckie, M.B., J. MacArthur, H. M. Gilmour, A. Edwards, M. H. Whiting, M.B., C. King, M.B., D. Duff, F.R.C.S. Edin., F. Hartley, M.B., T. E. Amyot, M.B., F. W. Hird, M.B., J. R. Rigg, M.B., W. J. Ronan, M.B., E. J. Stubbs, M.B.,

H. H. White, M.D., L. A. Walker, M.D., E. P. Chennells, R. Sherman, M.B., A. L. George, J. Mca. Hill, M.B., J. S. English, M.B., F. A. Murray, M.D., M. du B. Ferguson, M.D., F. R. Dougan, M.B., I. A. Dowling, S. Campbell, M.B., J. C. P. Bayley, G. W. Fleming, E. C. A. Smith, J. W. C. Gunn, M.B., H. Thwaites, L. D. Saunders, S. Murray, M.B., J. Craig, M.B., E. D. Wortley, T. Duncan, J. Lamb, M.B., J. D. Harmer, M.B., F.R.C.S., C. J. Buchheim, M.B., J. A. Ireland, A. V. Stocks, M.B., J. R. Kemp, G. Matthews, M.B., J. D. C. Swan, M.B., W. L. Hodge, A. V. J. Harrison, M.B., R. M. Greig, M.B., D. H. D. Wooderson, M.B., C. O. Stallybrass, M.D., P. J. S. O'Grady, M.B., R. C. Monnington, M.D., T. B. McKendrick, S. J. Simpson, M.B., F.R.C.S. Edin., W. H. Steele, M.B., V. Vesselovsky, W. Morris, C. A. Boyd, M.D., N. E. Rawson, M.B., C. B. Von Braun, A. C. S. Courts, M.D., E. L. Z. Fickling, J. McK. Ferguson, M. Italian, S. Nockolds, M.B., W. Brown, M.B., W. B. Pagen, H. P. Shackleton, M.B., A. H. M. Robertson, M.B., B. V. Powell, J. Jack, M.B., E. S. Johnson, M.D., W. J. Henry, M.B., H. Wachter, M.B., E. H. Worth, H. R. Ford, M.B., J. B. Low, M.B., A. Mearns, M.B., W. W. Hallchurch, M.B., E. S. Chapman, M.D., F.R.C.S. Edin., M. J. Johnston, M.B., R. B. Jackson, F. J. O. King, M.B., E. P. H. Vickery, M.B., E. A. Lumley, M.B., J. G. Moseley, W. E. Graves, O. A. Gee, M.B., G. Macleod, M.B., J. J. Sinclair, M.B., S. B. B. Campbell, M.B., D. H. Griffiths, D. W. Jones, W. F. Gibson, M.B., J. Allan, G. E. George-Andrews, E. F. Hobson, M.B., J. E. Phum, G. R. Hoard, J. B. McCabe, M.B., E. Evans, M.B., E. O. Fawcett, M.B., J. Chisholm, M.B., F. H. Rawson, G. Richardson, M.D., W. G. Thompson, M.D., F.R.C.S. Edin., J. S. Hall, M.B., H. L. Mowat, M.B., M. H. Pearson, M.B., J. S. Martin, J. Gibson, M.B., R. B. Macfie, M.B., F.R.C.S. Edin., R. G. Brown, D. G. M. Munro, M.D., G. Schofield, M.D. (late Captain, Hampshire Regiment).

To be temporary Captains: H. H. Scott, M.D., J. H. Connolly, M.D., F.R.C.S., M. A. H. McCarthy, M.B., B. Arnold, M.D.

To be temporary honorary Lieutenants: G. S. Graham, M.B., A. T. Edwards, F.R.C.S., E. L. Davies.

Lieutenants of the Canadian A.M.C. to be Lieutenants: V. K. O'Gorman, G. Cooper, M.B., R. C. J. Stevens, M.B., E. F. Nivin, C. A. Dupont, M.D.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London Casualty Clearing Station.—Lieutenant H. Drummond, M.B., late Lieutenant Northumberland (Hussars) Yeomanry, to be Lieutenant.

London (City of London) Sanitary Company.—Captain C. J. D. Gair is returned to the establishment.

London Sanitary Company.—John Tate to be Lieutenant. The following Lieutenants (temporary Captains) to be Captains: F. G. Caley, W. J. M. Sloman, M.D.

Home Counties Field Ambulance.—J. J. C. Hamilton to be Lieutenant.

Southern General Hospital.—Captain John W. Gill to be Major, December 30th (substituted for announcement in the *London Gazette* of December 20th).

Wessex Casualty Clearing Station.—Captain A. E. Huxtable, from *London Field Ambulance*, to be Captain.

Western General Hospital.—Lieutenants to be Captains: T. R. Bowen and G. L. Strachan, M.D.

South Wales Mounted Brigade Field Ambulance.—Lieutenant A. W. W. Hayles to be Captain.

Welsh Field Ambulance.—E. W. Griffith (late temporary Lieutenant R.A.M.C.) to be Captain; J. S. Wallace to be Lieutenant.

East Anglian Casualty Clearing Station.—Lieutenant J. Green, M.D., to be Captain.

East Anglian Field Ambulance.—R. J. R. Meurdy to be Lieutenant Colonel, and seconded for duty with a provisional Field Ambulance.

South Midland Field Ambulance.—Captain F. E. Franco, M.B., relinquishes his commission on account of ill health.

North Midland Casualty Clearing Station.—To be Lieutenants: J. W. Archibald, M.B., C. B. J. Kearney.

Notts and Derby Mounted Brigade Field Ambulance.—Lieutenant G. W. Miller to be Captain.

Northern General Hospital.—Lieutenants to be Captains: B. McKean, M.D., and R. P. Anderson, M.B. Captains H. J. Smith, M.B., and B. H. C. Lea-Wilson are seconded for duty with East Anglian Field Ambulance.

East Lancashire Field Ambulance.—To be Lieutenants: C. H. Hibbert, M.D., F. W. Schofield, M.B., E. Hulme, M.B.

West Lancashire Casualty Clearing Station.—Lieutenant T. H. Somervell to be Captain.

Northumbrian Field Ambulance.—Lieutenant O. Rogers, M.B., to be Captain.

Scottish General Hospital.—Lieutenant P. T. Catto, M.B., to be Lieutenant.

Highland Divisional Sanitary Service.—A. F. MacBean, M.B., to be Lieutenant.

Supernumerary for Service with the O.T.C.—Lieutenants to be temporary Captains whilst serving with the Medical Unit of the University of London Contingent, Senior Division, O.T.C.: Wm. Gillatt and R. D. Maxwell, M.B.

Attached to Units other than Medical Units.—Lieutenant Colonel C. G. Grant, from the Territorial Force Reserve, to be Lieutenant Colonel. Lieutenants to be Captains: W. L. Griffiths, M.D., F.R.C.S., W. N. P. Williams, N. P. Laing, M.B., R. B. Reed, M.B., A. Stewart, M.B., to be Lieutenant.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In the ninety-six largest English towns 6,824 births and 5,784 deaths were registered during the week ended Saturday, January 1st. The annual rate of mortality in these towns, which had been 17.1, 15.7, and 24.9 per 1,000 in the three preceding weeks, rose to 16.6 per 1,000 in the week under notice. In London the death-rate was equal to 17.4, while among the ninety-five other large towns it ranged from 7.5 in Southend, 8.7 in Wimbledon, 9.4 in Tottenham, 9.7 in Ilford, 9.8 in Merthyr Tydfil, and 10.2 in Wallasey, to 22.3 in Stockport and in Gateshead, 22.6 in Blackpool, 22.9 in Leicester, 23.3 in St. Helens, 24.5 in Bath, and 24.7 in Carlisle. Enteric fever caused a death rate of 1.3 in Southampton; measles of 1.2 in Nottingham, 2.0 in Grimsby, 2.1 in Gloucester, 2.3 in Bristol, 2.9 in Stockport, and 3.4 in Leicester; whooping-cough of 1.3 in Coventry, 1.4 in Warrington, and 1.7 in Darlington; and diphtheria of 1.6 in St. Helens, and 1.8 in Cambridge. The mortality from scarlet fever showed no great excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 71, or 1.2 per cent., of the total deaths were not certified by a registered medical practitioner or by a coroner; of this number, 18 were recorded in Birmingham, 10 in Liverpool, 4 in Preston, and 3 each in London, Bootle, Southport, and Ro-hdale. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,738, 2,582, and 2,462 at the end of the three preceding weeks, was 2,464 on Saturday, January 1st; 254 new cases were admitted during the week against 282, 245, and 206 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 964 births and 765 deaths were registered during the week ended Saturday, December 25th, 1915. The annual rate of mortality in these towns, which had been 22.4, 18.7, and 19.7 per 1,000 in the three preceding weeks, fell to 17.0 in the week under notice, but was 2.1 per 1,000 above that recorded in the ninety-six largest English towns. Among the several towns the death-rate ranged from 10.8 in Hamilton, 11.5 in Kirkcaldy, and 12.4 in Ayr, to 18.9 in Coatbridge, 23.5 in Perth, and 25.4 in Greenock. The mortality from the principal infective diseases averaged 1.1 per 1,000, and was highest in Hamilton and Coatbridge. The 352 deaths from all causes in Glasgow included 5 from infantile diarrhoea, 4 from measles, 2 each from scarlet fever and diphtheria, and 1 each from enteric fever and whooping-cough. Four deaths from measles were recorded in Coatbridge, and 3 each in Greenock and Hamilton; from scarlet fever, 4 deaths in Aberdeen, and 2 each in Edinburgh and Dundee; and from diphtheria, 2 each in Dundee and Paisley.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRKENHEAD BOROUGH HOSPITAL.—House-Surgeon and Junior House-Surgeon. Salaries £200 and £170 respectively.
BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £120 per annum in each case.
BURY INFIRMARY.—Senior House-Surgeon. Salary, £250 per annum.
CHESHIRE COUNTY COUNCIL.—Lady Assistant Medical Officer. Salary, £350 per annum.
CHESTER COUNTY ASYLUM.—Junior Assistant Medical Officer. Salary, £200 per annum.
CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Second House-Surgeon. Salary, £150 per annum.
DERBYSHIRE ROYAL INFIRMARY.—House-Physician and Casualty Officer. Salary, £200 per annum.
GRAVESEND HOSPITAL.—House-Surgeon.
LEAMINGTON SPA: WARNEFORD GENERAL HOSPITAL.—Second Resident Medical Officer. Salary, £150 per annum.
LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £136 per annum.
MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Cheetham Hill Road.—Lady House-Surgeon. Salary, £120 per annum.
MANCHESTER: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—(1) Resident Surgical Officer at the High Street Hospital. (2) Junior Resident at the Whitworth Street West Hospital. Salaries, £150 per annum.
NEW HOSPITAL FOR WOMEN. Euston Road, N.W.—Pathologist (female). Salary, £125 per annum.
NORTH STAFFORDSHIRE INFIRMARY. Hartshill, Stoke-on-Trent.—House-Physician (male or female). Salary, £200 per annum.
OLDHAM COUNTY BOROUGH.—Assistant Schools Medical Officer. Salary, £325 per annum, rising to £400.
PRESTON: COUNTY ASYLUM. Whittingham.—Locumtenent. Salary, £7 7s. per week.
WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Lady House-Surgeon. Salary, £150 per annum.
CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Finton (Tyrone), Hoddesdon (Hertford).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

DUNN, J. E., I.R.C.P. Edin., M.R.C.S., Certifying Factory Surgeon for the Preston (West) District, co. Lancaster.
GRAVES, A. J., M.R.C.S., I.R.C.P., Certifying Factory Surgeon for the Cleator District, co. Cumberland.
GROVES, T. C., M.B., B.S. Lond., Medical Superintendent of the Hereford County and City Asylum, vice Dr. Morrison, deceased.
WEBBER, W. W., I.R.C.P. Edin., M.R.C.S., Certifying Factory Surgeon for the Crewkerne District, co. Somerset.
WYSE, T. F., I.R.C.P. I.R.C.S., L.M. Incl., Assistant Medical Officer of the Whitechapel Union Infirmary.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

BERTRAM WATSON.—On January 6th, at 2, Ripon Road, Harrogate, to Dr. and Mrs. W. Bertram Watson, a son.
MACKINNON.—On January 9th, at Nairobi, British East Africa, the wife of Murdoch Mackinnon, M.D., D.P.H., of a daughter. (By cable.)

MARRIAGES.

BARRETT-HANCOCK.—On January 11th, at Christ Church, Surbiton, by the Rev. J. C. Barrett, Rector of S. Denys (father of bridegroom), the Rev. T. C. F. Barrett, Vicar of Halseston, to Mary Deborah Hancock, M.A.T.C.D., I.R.C.P., L.R.C.S. Edin., L.F.P.S. Glasg., daughter of E. H. Hancock, Esq., Alfriston, Surbiton.

COFFIN-STUART-MURRAY.—On January 10th, at the Church of St. Jude on the Hill, Hampstead Garden Suburb, by the Rev. Basil Bourchier, C.F., Lieutenant Stephen W. Coffin, R.A.M.C., son of Harold L. Coffin, to Iris, only daughter of the late Frank Stuart-Murray.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 8.30 p.m.—Discussion on Gunshot Wounds of the Chest, to be introduced by Colonel Sir John Rose Bradford, M.D., F.R.S., A.M.S., Captain Hubert Henry, R.A.M.C., and Captain Morrison Davies, R.A.M.C.T. Lieutenant-Colonel W. Hale White, M.D., R.A.M.C.T., Dr. Samuel West, Dr. Murray Leslie and others will take part in the discussion.

TUESDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF THERAPEUTICS AND PHARMACOLOGY, 4.30 p.m.—A discussion on the Soldier's Heart, to be opened by Sir James Mackenzie, F.R.S.

WEDNESDAY.

ROYAL METEOROLOGICAL SOCIETY, Surveyors' Institution, 12, Great George Street, Westminster, 7.30 p.m.—The President, Major H. G. Lyons, F.R.S.: Winter Climate of the Eastern Mediterranean.

ROYAL SOCIETY OF MEDICINE:
SECTION OF HISTORY OF MEDICINE, 5 p.m.—Dr. Arnold Chaplin: Mortality in the British Army 100 Years Ago. Dr. H. Selig Bennett: Joshua Ward.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF DERMATOLOGY, 4.30 p.m.—Exhibition of cases.
SECTION OF BALNEOLOGY AND CLIMATOLOGY, 5.30 p.m.—Dr. J. Campbell McClure: Hydrological Treatment of Gastro-intestinal Stasis.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF ELECTRO-THERAPEUTICS, 8.30 p.m.—Sir James Mackenzie Davidson will demonstrate a "commutator break" for utilizing the current at "make" as well as the current at "break," and will show a localizing couch. Dr. E. P. Cumberbatch: The use of the "Simpson Light," with a description of the apparatus. Dr. Russ will give an account of the physical properties of the light. The apparatus for the production of the light will be shown.

SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11, Chandos Street, W., 5.30 p.m.—Paper: The Etiology of Typhus, by Dr. W. J. Fenfold.

WEST LONDON MEDICO-CHIRURGICAL SOCIETY, West London Hospital, 8 p.m.—Clinical meeting, cases.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammersmith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be held.
JANUARY.	
14 Fri.	London: Medico-Political Committee, 2.15 p.m.
15 Sat.	Scottish Committee, Caledonian Railway Station Hotel, Edinburgh, 12.30 p.m.
19 Wed.	London: Finance Committee, 2 p.m.
26 Wed.	London: Council Meeting, 12 noon.
27 Thur.	Mid-Cheshire Division, Annual Meeting at Altrincham, 4 p.m.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

SCOTTISH MEDICAL SERVICE EMERGENCY COMMITTEE.

NOTICE.

The Scottish Medical Service Emergency Committee urgently requests those doctors who have not filled in their registration forms to do so without any further delay, and to forward them to the Secretary of the Committee at the Royal College of Physicians, Edinburgh.

Jan. 15th, 1916.

MEETING OF THE COMMITTEE.

A MEETING of the General Committee was held in the Royal College of Physicians of Edinburgh on January 15th, Dr. Norman Walker (convener) in the chair. There were present: Dr. A. H. F. Barbour, President of the Royal College of Physicians; Mr. James Hodsdon, President of the Royal College of Surgeons; Dr. Ebenezer Duncan, President of the Royal Faculty of Physicians and Surgeons of Glasgow; Professor J. A. Kynoch, Dean of the Faculty of Medicine, University of St. Andrews; Professor T. H. Bryce, Dean of the Faculty of Medicine of the University of Glasgow; Professor Harvey Littlejohn, Dean of the Faculty of Medicine, Edinburgh University; Dr. John C. McVeil, Deputy Chairman, National Health Insurance Commission, Scotland; Professor R. Muir, University of Glasgow; Professor T. K. Monro, University of Glasgow; Dr. J. R. Hamilton, Chairman, Scottish Committee, British Medical Association; Dr. John Adams, Vice-Chairman, Scottish Committee, British Medical Association; Dr. John Playfair, President of the Edinburgh Medical Guild; Dr. John Stevens, Secretary, Edinburgh Branch, British Medical Association; Dr. J. R. Currie, Medical Officer, National Health Insurance Commission, Scotland; Mr. T. H. Graham, Secretary. Sir Donald MacAlister, K.C.B., President of the General Medical Council; and Dr. Alfred Cox, Medical Secretary, British Medical Association, were also present.

The Convener, in reporting upon the progress of the Medical Recruiting Scheme for 1916, stated that about 25 per cent. of the registered practitioners in Scotland had not yet made a return as requested in the Committee's memorandum which was circulated in December last, and he pointed out that in order to be fully prepared to meet any further demands which the War Office may make upon the profession it was essential that the committee should possess a complete conspectus of the whole position of medical service in Scotland. This was the object of the Registration Scheme, and it was most desirable that those practitioners who had not yet answered the inquiry should do so without further delay.

The Presidents of the Royal Colleges of Physicians, the Royal College of Surgeons, and the Royal Faculty of Physicians and Surgeons of Glasgow, and the Deans of the Faculties of Medicine in the Universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh, were appointed, with the Convener, to deal with all applications for letters of excuse, and to report to the committee.

ENGLAND AND WALES.

THE CENTRAL MEDICAL WAR COMMITTEE.

THE Central Medical War Committee has sent a copy of the following letter to every medical practitioner of military age in England and Wales who has not hitherto accepted a commission in the R.A.M.C., and to the Secretaries of all the Local Medical War Committees:

January, 1916.

Dear Sir,

You are no doubt aware through the columns of the medical journals and the agency of your Local Medical War Committee of the plan of the Central Medical War Committee for enrolling all medical men of military age for service, if and when required, in the R.A.M.C. or the medical service of the Royal Navy.

The end of the war is not yet in sight. The country is greatly increasing its army, and Lord Derby's scheme has provided an immense number of potential soldiers who will be drawn upon as required. It is clear, therefore, that many more medical officers will be wanted, and members of our profession will, we are convinced, be at least as alive to the military necessities of the country as other members of the community.

Medical practitioners were not expected to attest under Lord Derby's scheme, because it was recognized that they could better be dealt with by a committee representative of their profession.

The Central Medical War Committee, originated by the British Medical Association, but including members who do not belong to the Association, is working with the full consent and authority of the Director-General of the Army Medical Service. The Committee is recognized by him as the medium for providing medical men needed by the War Office for the army, and at the same time protecting the needs of the civil population.

The Central Medical War Committee now confidently appeals to you as a medical man of military age to assist our national military organization by enrolling yourself for service in the R.A.M.C. when required, and to justify the confidence placed in the profession, which has been asked to organize itself for the service of the country. To enable you to do this, we enclose Forms W. 7 and W. 8, which should be completed and returned to this office with as little delay as possible.

The Committee hopes to enrol every medical man of military age (in the case of our profession up to the age of 45) so that as further calls are made by the Director-General of the Army Medical Service these calls may be promptly met with due regard to the necessity of the services, to the needs of the civilian population, and to the circumstances of individual medical practitioners. Unless all are enrolled it will be very difficult for the Central Medical War Committee to make its calls throughout England and Wales in a manner which will minimize the inconvenience suffered by the community and by individual medical practitioners.

It must be remembered that the enrolment of all medical men of military age does not mean that all enrolled will be called upon to take a commission. The number called upon will depend entirely on the demands of the services. The calls will be made in consultation with the local committees, and due regard will be given to (1) the system of classification adopted as a guide by the Central Medical War Committee (see Appendix A), (2) the circumstances of the individual practitioners, and (3) the opinion of the

Local Medical War Committees as to which practitioners can be most easily spared. The local Committee will advise and co-operate with a view to safeguarding the work and interests of the absent practitioners so far as it is able.

The Central Medical War Committee hopes that all practitioners to whom this is addressed will believe that some months' experience in dealing with this question has made the Committee thoroughly conversant and deeply sympathetic with the difficulties which most practitioners experience in leaving their work. But some thousands of medical men have now made the sacrifice, and what they have done others may fairly be asked to do. The Committee believes also that those who are not able, or are not required, to undertake military service will, so far as opportunity offers and their ability permits, contribute to the military strength of the country by placing their services at the disposal of the Local Medical War Committees for the purpose of arrangements that may be necessary for the conservation of the practices of men of military age to enable them more easily to enrol.

On enrolment you will receive a numbered certificate, and this will be taken as equivalent so far as the medical profession is concerned to attestation under Lord Derby's Scheme. If you have been attested under that scheme, you should at once enrol with this Committee. Your attention is drawn to the official communiqué issued by the Army Council on January 13th, 1916 (see Appendix B).

It is to be specially noted that one great privilege is given to the medical profession that does not apply to any other section of the community, namely, that a medical man can enter the R.A.M.C. on a contract for one year's service, whereas every one else must join the services for the duration of the war. It cannot be assumed, however, that the same privilege will be accorded to those practitioners who fail to enrol with our Committee.

It has been urged frequently that the army does not require so many medical officers as are now being requisitioned. On this point we would impress upon you that at present no one is in a position to say how many medical officers may be required; that we are in close communication with the War Office; and that the question of economy of personnel is continually under discussion, and rearrangements are continually being made to obtain the most economical service. We are convinced that the War Office, the Local Government Board, and the National Health Insurance Commissioners, as well as this Committee, are fully alive to the needs of the civilian population, and are doing their utmost to adjust the requirements of the military and civilian medical services to the existing conditions.

We are, yours faithfully,
N. BISHOP HARMAN,
ALFRED COX,
Secretaries.

* * Form W. 7 is a form on which a civil surgeon desirous of service with the R.A.M.C. enters particulars as to name, qualification, address, etc., and as to appointments and previous service, if any. Form W. 8 authorizes the Central Medical War Committee to forward the signatory's application for a temporary commission in the R.A.M.C. to the War Office whenever, in the opinion of the Committee, the time has arrived for his services to be placed at the disposal of the military authorities, on the understanding that at least one month's notice will be given before his services are required.

Appendix A gives the system of classification of practitioners issued by the Central Medical War Committee on December 8th (SUPPLEMENT, December 11th, p. 214). Appendix B reproduces the official communication issued by the Army Council on January 13th and published in the last issue of the JOURNAL, p. 102.

LOCAL GOVERNMENT BOARD IN IRELAND.

At the last meeting of the Enniscorthy Board of Guardians a letter was read from the Local Government Board refusing to sanction the appointment of the senior house-surgeon, Mater Hospital, Dublin, as medical officer of the Enniscorthy Dispensary District, on the grounds that, being 23 years of age, he was eligible for employment with the army or navy. The chairman protested against the decision of the Local Government Board on the grounds that the doctor who was doing temporary duty at 4 guineas a week was also eligible for military service, and if the new appointment were sanctioned it would mean a saving to the ratepayers. It was therefore decided to insist on the Local Government Board sanctioning the appointment.

INSURANCE.

DRUG FUND REGULATIONS.

THE Commissioners for England and Wales have now issued in their final form for official use the additions and amendments of the Medical Benefit Regulations which purport to embody the various matters in connexion with the Drug Fund which have been under discussion for the last few months. There is a wonderful amount of padding and intricate meandering round the different subjects which make many of the paragraphs most difficult to unravel; the new regulations deal with the accounts of the chemists under the new system of the commercial tariff, the adjustment between the Drug Fund and the Practitioners' Fund, the payment of capitation fees to practitioners for the supply of drugs and appliances, and other adjustments of the Drug Fund following on the new arrangements.

The obnoxious Article 40 of the principal regulations is definitely revoked and replaced by the new arrangements which are to guide the Panel Committees in investigating the prescribing of panel practitioners. Some adjustment is also made of the Central Medical Benefit Fund relating to the supply of drugs and appliances to temporary residents. Insurance Committees are authorized, after due notice, to forbid the use of the term "Rep. mist.," and a special provision is inserted that all drugs and appliances shall be of a grade or quality costing the chemist as nearly as possible the price allowed by the tariff. Apparently the new regulations carry out fairly well the alterations which have already been foreshadowed, but the unnecessarily complicated verbiage will involve almost endless references to the Commissioners as to the exact meaning, and probably necessitate fresh explanatory memorandums. The regulations came into operation at the beginning of the present year.

THE PRICING OF PRESCRIPTIONS.

THE Commissioners have issued, in Memo. 220 I.C., a full account of the administrative procedure in connexion with the drug supply arrangements for 1916 and the pricing of prescriptions.

According to the regulations chemists have to furnish an account of drugs and appliances supplied at such dates as may be required, and it is now provided that the accounts must be sent in monthly not later than the fourth of each month for the preceding month. It will not be necessary, under the new system, for the chemists to take the trouble to price their scripts, as that will be done by the Pricing Committee on behalf of the Insurance Committee. Special forms of invoices will be provided on which the chemists will have to state the number of scripts dispensed on the order of each doctor separately, each doctor's prescriptions being sent in in separate bundles, and a duplicate invoice will be required. The arrangements for pricing made by Insurance Committees are to be such as will enable a month's prescriptions to be dealt with in a month—that is to say, before the end of any month the scripts of the previous month must all have been priced. This will enable a payment to be made to the chemists not later than the fifteenth of the second month following that to which the prescriptions relate—for example, March 15th for the January prescriptions. Several provisions are also made to lessen the amount of correspondence necessary and to facilitate the payment of accounts without unnecessary delay. In anticipation of the actual process of pricing, an advance payment will be made on the number of scripts sent in, and at a given rate per script. It is hoped that after a few months' experience it will be possible to pay as much as 90 per cent. on the average cost per script. At first, however, advances will be based on the average cost per script for 1915 under the old system, and the Commissioners think that not over 80 per cent. should be paid. The regulations provide for the exercise by or on behalf of the chemists of the right of scrutiny of the Insurance Committee's pricing, and further regulations will provide that the Insurance Committee must furnish the following statistics to Panel Committees:

1. Total cost of prescriptions for the area.
2. Total number of prescriptions for the area.
3. Total cost of prescriptions for each doctor.
4. Total number of prescriptions for each doctor.
5. Average cost per insured person on lists for whole area.
6. Average number of prescriptions per insured person on lists for whole area.
7. Average cost per insured person on each doctor's list.
8. Average number of prescriptions per insured person of each doctor's list.
9. Average cost per prescription for whole area.
10. Average cost per prescription of each doctor's prescribing.

These statistics are to be sent gratis to each Panel Committee monthly and also at the end of the year for the whole year, in order to assist the Panel Committee in reviewing the prescribing of each doctor in the area. In addition to the detailed pricing of scripts according to the new tariff for the purpose of payment of the chemists, and to assist the Panel

Committee in checking excessive prescribing, it will also be necessary to assess the prescriptions in accordance with the old tariff for the purpose of determining what amount, if any, of the floating 6d. is to be transferred to the practitioners' fund. For this purpose it will not be necessary to price out the prescriptions a second time in detail, and methods of calculation are suggested by which it will be possible to make a proper assessment without a second detailed pricing, but the Commissioners promise to deal more in detail with this in a future memo. Model forms of invoice, advice note, and register will be supplied, and committees are instructed that to facilitate the new system there should be as much uniformity as possible in the shape and size of their prescription forms. At present the sums allotted for the expenses of Pharmaceutical Committees are chargeable rateably on the amounts credited to the panel chemists, and the Insurance Committees are reminded that these cannot under the new system become chargeable on any funds which would otherwise be available for practitioners. The memo. is accompanied by copies of the new forms of invoice and register to be used by chemists and by the pricing committees.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

Safeguards against Excessive Prescribing.—At a special meeting of the London Panel Committee held on December 28th, 1915, a report on the administrative expenses in connexion with the scrutiny of prescriptions, etc., was submitted by the Finance Subcommittee, in which it was pointed out that an expenditure of 2 per cent. of the Drug Fund (that is, £2,500) in connexion with special investigations and advice would prevent any burden in connexion with the expenses of the Panel Committee in future falling on the practitioners' shoulders, and if, as a result, the drug bills were reduced from £160,000 to £105,000, the average cost would be reduced from 2s. 8d. to 1s. 9d. per insured person, and the doctors would receive 3d. of the divisible 6d. Dr. ALFRED SALTER moved an amendment to the effect that all such administrative expenses should be provided out of some fund other than the Practitioners' Fund. If the Commissioners wanted elaborate machinery for surcharging purposes and for regulating the Drug Fund they should provide the money. Dr. Salter's views were supported by several speakers, one of whom compared the position of the panel practitioner unfavourably with that of the Poor Law medical officer, who was not subject to such inquisition with regard to his drugs. Eventually, however, it was resolved that the Panel Committee should do everything in its power to render effective the safeguards against excessive prescribing, any reference to administrative expenditure being omitted.

Stock Mixtures.—The Committee agreed to the selection of ten preparations from the London insurance pharmacopoeia in respect of which a reduced dispensing fee of 2.3d. per prescription should apply as from January 1st.

INSURANCE ACT IN PARLIAMENT.

RETRENCHMENT COMMITTEE.

On January 18th Mr. Currie asked a question as to the allegations of the town council of Edinburgh regarding waste of money on sanatorium treatment. The Chancellor of the Exchequer stated, in reply, that the Retrenchment Committee was considering the whole question of insurance administration, and would shortly present a further report.

Association Notices.

MEETING OF COUNCIL.

The next Meeting of Council will be held on Wednesday, January 26th, in the Council Room, 429, Strand, London, W.C., at 12 noon.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

January 1st, 1916.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Honorary Deputy Inspector-General E. Concoran to the *Victory*, additional; Fleet Surgeons H. L. Norris to the *Triad*, additional, for disposal; J. W. Craig, M.B., to the *Victory*, additional, for disposal; F. R. Mann to the *Agamemnon*; W. Brett, M.V.O., to the *Excellent*; J. A. Moon to the *Bombay*; H. Huskinson, M.B., to the *Pomone*, additional, for Dartmouth College, vice Moon; W. H. O. Garde to the *Thunderer*; J. W. O. Underhill, M.B., to the *Wildfire*,

for Barracks and Sheerness Yard, temporary; J. Andrews, M.D., to the *Triad*, for Truro Auxiliary Naval Hospital; P. H. Boyden, M.D., to the *Pembroke*, additional, Staff Surgeons E. R. Townsend to the *Chatham*; J. M. Gordon, M.B., to the *Pactolus*; H. R. H. Denny to the *Collingwood*; F. H. Holt to the *Royalist*, Surgeon J. A. O'Flynn, M.B., to the *Triad*, additional, for disposal, Temporary Surgeons A. M. Dunlop, M.B., to the *Pembroke*, additional, for Chatham Hospital; H. B. Lawrie, M.B., H. C. Jennings and C. M. Williams to the *Triad*, additional, for Plymouth Hospital; J. Duffin, M.B., A. G. Brown, M.B., J. M. Hiddleston, and R. Aitken, M.D., to the *Victory*, additional, for Haslar Hospital; A. G. Taylor, M.B., and W. H. Steel, M.B., to the Royal Marine Light Infantry Division, Portsmouth; J. McFarlane to the *Cormorant*; J. Allen, M.B., and J. B. Simpson, M.D., to the *President*, additional; S. N. Wright to the *Racer* for Osborne College, vice Allen; C. P. G. Wakeley and T. J. Thomas to Haslar Hospital, H. E. K. Fretz to the *Pembroke*, additional; T. S. Harrison to the *Victory*, for Royal Naval Depot, Crystal Palace. To be temporary Surgeons: S. P. Mort, J. A. Prendergast, and T. G. Russell.

ARMY MEDICAL SERVICE.

Lieutenant-Colonel J. F. M. Kelly, M.B., to be temporary Colonel whilst employed as Assistant Director of Medical Services of a Division.

Major W. M. B. Sparkes to be temporary Lieutenant-Colonel whilst acting as Assistant Director of Medical Services of a Division.

ROYAL ARMY MEDICAL CORPS.

Temporary Lieutenant Colonel L. S. Dudgeon relinquishes his commission.

Temporary Major C. S. Myers, M.D., to be temporary Lieutenant-Colonel.

Temporary Captain R. J. D. Irvine, M.B., to be temporary Major.

Temporary Captain C. N. Binney, M.B., relinquishes his commission.

Temporary Lieutenants relinquishing their commissions: J. W. O'Farrell, J. W. Richardson, F.R.C.S.E., F. K. Kerr, M.B., D. G. Haisted, M.B., M. C. Turiansky, M.B., C. W. Hamilton, M.D., J. E. Barnes, M.B., R. Cope, A. N. Leeming, M.B., J. G. Macquoen, M.B., A. T. Ross, M.D., F.R.C.S.E., J. F. Gibbons, W. J. F. Mayne, M.B., M. Douglas, M.D., J. C. L. Day, B. W. Clark, J. G. McDougall, M.B., W. G. Heisby, J. Potter, O. C. Holman, M.B., F.R.C.S., V. Borland, M.B., J. C. McConaghey, M.D., E. A. Campbell, M.D., H. Fleming, M.B., W. H. W. Atlee, M.D., A. B. Wilson, M.D., J. Anderson, M.B., R. T. Worthington, M.B., W. J. Harper, W. F. Dunlop, M.B., H. E. H. Tracy, G. B. Horrocks, G. J. B. Candier-Hope, M.B., W. Readman, M.B., O. T. Bishop, M.B., E. G. Wheat, M.D., J. Duffin, M.B., E. H. A. Pask, M.D., D. Elder, M.B., B. M. Bone, M.B., F.R.C.S.E., W. McH. Binning, G. R. Phillips, M. Sullivan, J. H. Douglas, M.D., S. D. Farvesher, M.B., H. D. Robertson, M.B., B. E. Sedgwick, M.D., W. Taylor, M.B., J. B. Askew, F.R.C.S., H. F. McKendrick, M.D., I. P. Kelly, R. MacCarthy.

Temporary Lieutenants to be temporary Captains: N. K. Wilson, M.B., W. J. G. Gayton.

Temporary honorary Lieutenants to be temporary Lieutenants: G. C. Linder, G. S. Terry, D. H. Derry.

To be temporary Lieutenants: D. Mackay, M.B., J. H. Cooke, M.B., J. G. Craig, M.B., F.R.C.S.E., B. S. Harvey, M.B., C. F. Rumsey, H. J. Nightingale, M.B., F.R.C.S., H. G. Smith, L. Fraser, W. Duffy, M.B., L. D. I. Graham, M.B., J. E. Cheesman, D. M. Clements, M.B., J. Cameron, M.B., N. Navar, H. Harrison, W. H. Blakemore, F. M. Murray, W. S. Melville, M.B., L. Levene, M.B., P. Stocks, M.B., P. A. B. Clark, M.B., D. W. Daniel, M.D., F.R.C.S., V. Colmer, S. E. T. Shaan, M.B., T. H. Twigg, M.B., T. A. Mayo, M.B., F.R.C.S., T. L. Price, H. M. Vickers, M.B., D. M. Moffatt, M.D., H. Goodman, W. J. Ashby, M.D., W. Hamilton, M.D., G. Thomson, H. F. Johns, M.D., H. W. M. Storer, M.B., P. E. B. Barrow, M.B., M. Chadwick, J. S. Dunn, M.D., C. B. Joyce, M.D., B. A. Johnston, W. J. Logie, M.B., D. G. MacArthur, M.D., W. G. Macdonald, M.B., H. E. Blosome, F. Hannigan, H. F. Brice-Smith, O. Carlyle, M.D., F.R.C.S.E., J. J. O'Kelly, P. N. Allman, G. W. Spencer, M.B., C. S. Vartan, M.B., J. K. Davies, F. M. Byrne, G. T. Baker, J. McIntyre, M.B., H. A. G. Hadden, D. K. MacDougall, M.B., B. S. Dollard, S. A. D'Arcy, P. A. Nighinvalle, M.D., H. Coppock, M.D., A. Chance, M.D., F.R.C.S., W. C. Mence, H. H. Flisk, G. C. Adeney, M.B., F.R.C.S., A. T. Gibb, M.B., W. Wilson, M.D., J. Smith, M.B., J. B. Mackay, M.B.

To be temporary Lieutenants: E. P. Evans, M.D., J. C. A. Ridgway, M.D., H. G. Haynes, M.B., H. C. Watson, M.D., F. G. Thomson, M.D., H. Stewart, M.B., J. P. O'Connor, M.B., J. D. Robertson, M.B., H. Catling, S. L. Haslett, M.B., H. S. Sims, M.B., R. M. Moore, M.B.

Lieutenants of the Canadian Army Medical Corps to be temporary Lieutenants: H. E. Brown, M.B., F. L. Hill, M.D., W. A. E. Michell, M.B., J. H. Egbert, T. G. H. Drake, M.B., M. A. Kenny, M.D.

Temporary honorary Lieutenant A. M. Crabtree, F.R.C.S., relinquishes his commission on ceasing to serve with the New Zealand War Contingent Hospital.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

The date of the promotion of Lieutenant J. Cameron, M.B., to the rank of Captain is antedated to April 1st, 1915 (but not to carry army pay or allowances prior to May 4th, 1915).

Lieutenants (on probation) confirmed in their rank: W. H. A. D. Sutton, W. S. Sharpe, and J. B. Cavenagh.

Captain S. Wright is placed temporarily on retired pay on account of ill health (substituted for the notification which appeared in the *Gazette* of September 18th, 1915).

Lieutenant A. C. Cassels, M.B., is placed temporarily on retired pay on account of ill health.

Ex-Cadet Sergeant G. T. Ginetle, M.B., University of London Contingent, O.T.C., to be Lieutenant on probation.

OVERSEA CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

Lieutenant-Colonel J. T. Fotheringham, Assistant Director of Medical Services, to be temporary Colonel.

Lieutenant-Colonel J. A. Roberts to be temporary Colonel.

Major E. B. Hardy to be temporary Lieutenant-Colonel.

Major E. B. O'Reilly, Canadian Militia, to be temporary Major.

Captains to be temporary Majors: J. D. McQueen, P. G. Brown, H. Jones.

The name of Captain James Wells Ross is as now described, and not as stated in the *Gazette* of November 17th, 1915.

To be temporary Captains: D. A. Clark, N. H. Ferguson, H. MacLaren, J. Donald, T. A. Mallock, A. W. Trefrey, E. Goulder, C. W. Waldron.

BRITISH WEST INDIES REGIMENT.

A. J. Clark, M.B., to be Surgeon-Captain; W. S. Mitchell and A. G. Carpey to be Surgeon-Lieutenants.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Northern General Hospital.—Captain C. Mears, M.B., from the Northumbrian Casualty Clearing Station, to be Captain. Captain G. B. Simpson is seconded whilst holding a temporary commission as Major in the R.A.M.C. The following are seconded: Majors A. S. F. Leyton, M.D., A. J. Hall, M.D., and A. E. Naish, M.B.; Captains W. H. Nutt, M.D., E. A. Hepworth, F.R.C.S. Lieutenants to be Captains: J. Stokes, M.D., W. W. N. King, M.B., F.R.C.S.E., T. A. Len, M.B.

Home Counties Field Ambulance.—Lieutenant G. Hislop, M.B., to be Captain.

South-Western Mounted Brigade Field Ambulance.—Lieutenant W. S. Soden to be Captain.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In the ninety-six largest English towns 8,241 births and 4,990 deaths were registered during the week ended Saturday, January 8th. The annual rate of mortality in these towns, which had been 15.7, 14.9, and 16.6 per 1,000 in the three preceding weeks, fell to 14.3 per 1,000 in the week under notice. In London the death-rate was equal to 13.3, while among the ninety-five other large towns it ranged from 5.9 in Hornsey, 6.3 in Rhondda, 6.9 in Ilford and in Reading, 7.8 in Willesden, 8.5 in Walthamstow, and 9.1 in Portsmouth, to 21.1 in Dudley and in South Shields, 22.6 in Gloucester, 22.9 in Tynemouth, 23.3 in Blackburn, and 26.2 in Hastings. Measles caused a death-rate of 1.4 in Burnley, 1.5 in Bath, 2.1 in Stockport, and 2.2 in Bristol; scarlet fever of 1.6 in St. Helens; and diphtheria of 2.6 in Hastings. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 44, or 0.9 per cent., of the total deaths were not certified by a registered medical practitioner or by a coroner; of this number 9 were recorded in Liverpool, 7 in Birmingham, 3 in London, and 2 each in West Bromwich, Dudley, Southport, Blackburn, Preston, Barrow, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,582, 2,462, and 2,464 at the end of the three preceding weeks, fell to 2,325 on Saturday, January 8th; 225 new cases were admitted during the week, against 245, 206, and 254 in the three preceding weeks.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, December 25th, 1915, 383 births and 396 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 508 births and 516 deaths in the preceding period. These deaths represent a mortality of 17.0 per 1,000 of the aggregate population in the districts in question, as against 22.2 per 1,000 in the previous period. The mortality in these Irish areas was therefore 2.1 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 16.5 per 1,000 on population. As for mortality of individual localities, that in the Dublin registration area was 17.0 as against an average of 24.4 for the previous four weeks, in Dublin city 18.7 (as against 25.8), in Belfast 18.1 (as against 20.8), in Cork 17.7 (as against 22.9), in Londonderry 20.2 (as against 19.3), in Limerick 19.0 (as against 13.9), and in Waterford 20.9 (as against 20.4). The zymotic death-rate was 1.6, as against 2.0 in the preceding period.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRKENHEAD BOROUGH HOSPITAL.—House-Surgeon and Junior House-Surgeon. Salaries, £200 and £170 respectively.

BRIDGWATER HOSPITAL.—House-Surgeon (male). Salary, £125 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £120 per annum in each case.

BURY INFIRMARY.—Senior House-Surgeon. Salary, £250 per annum.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Second House-Surgeon. Salary, £150 per annum.

DERBYSHIRE ROYAL INFIRMARY.—House-Physician and Casualty Officer. Salary, £200 per annum.

DUNROSSNESS PARISH.—Medical Officer and Vaccinator.

GRAVESEND HOSPITAL.—House-Surgeon.

GREENWICH UNION.—Assistant Medical Officer of Infirmary and Workhouse. Salary, £175 per annum.

HOLBORN UNION.—Temporary Resident Medical Officer at the Institution, City Road, N.

LEAMINGTON SPA: WARNEFORD GENERAL HOSPITAL.—Second Resident Medical Officer. Salary, £150 per annum.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LIVERPOOL ROYAL INFIRMARY.—Gynaecological Surgeon.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Cheetham Hill Road.—Lady House-Surgeon. Salary, £120 per annum.

MIDDLESBROUGH: NORTH ORMESBY HOSPITAL.—House-Surgeon. Salary, £150 per annum.

NORTH STAFFORDSHIRE INFIRMARY.—Hartshill, Stoke-on-Trent.—House-Physician (male or female). Salary, £200 per annum.

PRISTON: COUNTY ASYLUM, Whittingham.—Locumtenent. Salary, £7 7s. per week.

SHEFFIELD CITY.—Assistant Medical Officer to the Tuberculosis Dispensary (female). Salary, £350 per annum.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, S.W.—Senior Resident Medical Officer. Salary, £250 per annum.

WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Lady House-Surgeon. Salary, £150 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Barrow-in-Furness (Lancaster); Staplehurst (Kent).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

GALT, H. M., B.Sc., M.B., D.P.H., Captain R.A.M.C.(T.F.), additional Examiner in Medical Jurisprudence and Public Health for Degrees in Science and Medicine at Glasgow University.

GRAVES, T. C., M.B., B.S. Lond., F.R.C.S., Medical Superintendent of the Hereford County and City Asylum (incorrectly printed last week as Groves).

SLOAN, Samuel, M.D., Examiner in Midwifery and Diseases of Women to the University of Glasgow.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

ANDERSON.—At Newholme, Pitlochry, on January 18th, the wife of John Anderson, M.B., C.M. Edin., of a daughter.

MARRIAGE.

MORLEY-SIMON.—On January 12th, at Stowmarket, John Morley, Ch.M., F.R.C.S., Captain R.A.M.C.(T.), 1st E. Lanes. Field Ambulance, to Mary Ogilvy Simon.

DEATHS.

PARNELL.—On January 9th, at Sydenham, suddenly, the result of an accident, Mary Emily Langston, the wife of Gerald Crisp Parnell, M.R.C.S. Eng., etc., of Bodowen, Honer Oak Road, Forest Hill, S.E.

STUART.—On January 10th, at Burnopfield, co. Durham, John George Stuart, M.B., C.M. Aberd., aged 49 years.

WILLIAMS.—On January 16th, 1916, Herbert Williams, M.D. Lond., of 7, Ulundi Road, Blackheath, Medical Officer of Health for the Port of London, son of Algernon T. H. Williams, J.P., of Weymouth. Interred at Melcombe Regis Cemetery, Weymouth.

DIARY FOR THE WEEK.

MONDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF ODONTOLOGY, 8 p.m.—Paper: Mr. W. Courtney Lyne: The Significance of the Radiographs of the Pitted Teeth. Professor Arthur Keith, Professor A. S. Underwood, and Dr. Smith Woodward will take part in the discussion. Mr. Rushton: Absent Dentition.

TUESDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF PSYCHIATRY, 8.30 p.m.—Discussion on the Functional Neuroses without Visible Sign of Injury caused by Shell Fire. To be opened by Dr. Mott, F.R.C.S.
MEDICO-LEGAL SOCIETY, 11, Chandos Street, W., 5 p.m.—Exhibition. Short Account of a Criminal Case: Was the plea of "qualified responsibility" justifiable? by Sir John Collier, M.D.

WEDNESDAY.

HUNTERIAN SOCIETY, Guy's Hospital, 4 p.m.—Cases of clinical interest will be shown by members of the staff.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF NEUROLOGY, 8.30 p.m.—Adjourned discussion on the Functional Neuroses without Visible Sign of Injury caused by Shell Fire (see above). Dr. Batten, Dr. Farquhar Buzzard, Dr. J. S. Collier, Dr. E. G. Fearnside, Dr. Wilfred Harris, and Dr. Campbell Thomson will speak.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF STUDY OF DISEASE IN CHILDREN, 4.30 p.m.—Cases and specimens. Paper: Dr. J. Porter Parkinson: Nephritis without Albuminuria.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.
NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.
THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
JANUARY.	
21 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
26 Wed.	London: Council Meeting, 12 noon.
27 Thur.	Mid-Cheshire Division, Annual Meeting at Altrincham, 4 p.m.
FEBRUARY.	
2 Wed.	London: Central Medical War Committee, 2 p.m.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

IRELAND.

RECOGNITION OF IRISH MEDICAL WAR COMMITTEE.

The Secretary to the Department of Recruiting for Ireland has issued the following statement to the Press:

Following on representations which have been made to him by the Irish Medical War Committee, the Lord Lieutenant, as Director-General of Recruiting for Ireland, has sanctioned the recognition of that Committee as the official channel of recruiting for the medical profession.

The Committee have undertaken to give every possible assistance to the military authorities in the provision of medical officers for the army.

With this object in view, they are prepared to facilitate the release of the younger members of the profession by endeavouring to provide acceptable substitutes, and, if so desired, by helping to reorganize the medical service in neighbourhoods from which practitioners are willing to join the service.

Members of the medical profession who wish to apply for commissions in the Army Medical Service are accordingly recommended to write in the first instance to the Honorary Secretary of the Committee, care of the British Medical Association, 16, South Frederick Street, Dublin.

CONDITIONS OF LEAVE TO POOR LAW MEDICAL OFFICERS JOINING THE ROYAL ARMY MEDICAL CORPS.

Three out of the four Poor Law medical officers in the Abbeyleix Union (Queen's County) applied to the board of guardians for leave of absence to join the Royal Army Medical Corps. After considerable discussion leave of absence was granted providing the doctors joining the R.A.M.C. would relinquish their salaries as Poor Law medical officers.

WALES.

SWANSEA.

A local Medical War Committee has been formed consisting of the Executive Committee of the Swansea Division of the British Medical Association together with other practitioners so that each area of the Division is adequately represented. Steps were taken to safeguard the practices of men called up for active service by asking every practitioner in the Division to sign the usual undertaking. All medical men under 46 years of age have been canvassed to volunteer for whole-time general military service if, and when, required. The results of the canvass, which was very thoroughly conducted, gave the following results for the districts in the area of the Division:

Number of practitioners before the war	141
On active service	19
Number not signed undertaking	9
Number of military age	50
Enrolled	40

Of the number of military age 34 were under 41, and 25 had enrolled; there were 16 over 41 and under 46, all of whom had enrolled. Of the 9 whose enrolment was not definitely reported 3 had attested under the general Derby scheme, 1 had previously been rejected, 1 was on home service, 1 had not definitely confirmed his enrolment, and 2 were employed by medical aid associations. The popula-

tion of the Division is roughly 313,000, and the number of general practitioners at the present time is 99, giving a ratio of 1 doctor to 3,161 people. This ratio was found to be fairly constant in the different districts. If all the doctors of military age were called up 62 general practitioners would be left, giving a ratio of 1 doctor to 5,050 people. After some correspondence with Lord Derby as to the doctors who had attested under his scheme, it was arranged that when an attested medical man was called up he would not be taken as a combatant, provided he produced to the recruiting officer a certificate of enrolment under the scheme of the British Medical Association. The Committee recommends that applications for commissions should be retained by the local War Committee, and all subsequent arrangements made through that Committee.

INSURANCE.

INSURANCE ACTS COMMITTEE.

A MEETING of the Insurance Acts Committee was held at the office of the British Medical Association on Thursday, January 13th, when Dr. J. A. MACDONALD, LL.D., was in the chair. The other members present were:

England and Wales: Dr. T. Ridley Bailey (Bilston), Dr. H. B. Brackenbury (London), Dr. T. Campbell (Wigan), Dr. Olive Chydon (Oldham), Dr. J. Divine (Hull), Major A. C. Farquharson (Newcastle-upon-Tyne), Lieutenant E. R. Fothergill (Hove), Dr. P. V. Fry (Sowerby Bridge), Dr. Major Greenwood (London), Dr. R. Harding (New Radnor), Professor A. Bostock Hill (Birmingham), Dr. B. A. Richmond (London), Dr. W. B. Crawford Treasure (Cardiff). *Scotland:* Dr. John Adams (Glasgow), Dr. J. R. Drexer (Glasgow), Lieutenant J. Hunter (Corstorphine). *Ex officio:* Dr. E. Rayner, Treasurer (Stockport).

SURGERY ACCOMMODATION.

The opinion of the solicitor to the Association concerning the requirements of an Insurance Committee was considered, and it was decided to recommend to the panel practitioner concerned that specific complaints with regard to surgery accommodation should be dealt with by the Medical Service Subcommittee, as provided in the regulations.

DRUG TARIFF.

It was decided to approach the Commissioners from time to time in order that the interpretations of the principles of the tariff by various Insurance Committees may be co-ordinated and defined. It was reported that a conference had been held on January 6th between Dr. Richmond, Captain Lilley, and the Medical Secretary, representing the Association, and representatives of the Pharmaceutical Society, when prices for the starred drugs in the 1915 tariff were agreed for the month of January which it was understood would be accepted by the Commissioners. Their action was approved, and they were appointed to deal, in conference with the representatives of the Pharmaceutical Society, with any question as to the monthly pricing of the starred drugs in the 1915 tariff, and empowered to call in expert assistance.

STOCK MIXTURES.

It was agreed to seek an early conference with representatives of the Pharmaceutical Society for the purpose of agreeing, if possible, on a list of mixtures which could

be stocked without deterioration, and from which list a number, not exceeding ten, may be chosen by any Panel Committee.

USE OF SALVARSAN, VACCINES, SERUMS, ETC.

In answer to a question raised by the Lancashire Panel Committee it was resolved:

That the Insurance Acts Committee is of opinion that the "provision of proper and sufficient medicines," as contemplated by the 1911 Act, does not include the supply of salvarsan, vaccines, serums, etc.

That with a view to the proper treatment of insured persons suffering from diphtheria, the Committee is of opinion that public health authorities should be urged to use the powers they possess, and which most of them utilize, namely, to supply diphtheritic serum gratuitously.

SUSPENSION OF RIGHT OF TRANSFER.

It was decided to present a report to the next conference of representatives of Local Medical and Panel Committees regarding the Association's representations to the Insurance Commissioners pursuant to the decision of the 1915 conference, with reference to withholding the right of an insured person to transfer from the list of any doctor who was absent on naval or military service for the period of the war, or until a reasonable time after his return, and to indicate that in the opinion of the Committee the regulation introduced by the Commissioners in accordance with those representations was satisfactory.

PAYMENTS TO PRACTITIONERS.

It was resolved that, owing to the peculiar difficulties in ascertaining the final amounts of money available to insurance practitioners owing to the war, and in view of the virtual promise of the Commissioners to fix a definite date for the final settlement of each year's accounts after the war, to take no further steps at present to seek any case in which a practitioner has received a less sum than could be proved by his list to be due to him under his contract, for prosecution in the law courts.

THE PRICING OF PRESCRIPTIONS.

A DRAFT scheme has now been agreed on and only needs final confirmation for the pricing of prescriptions under joint arrangements between the Manchester and Salford Insurance Committees. The scheme provides that a joint committee shall be constituted consisting of an equal number of members appointed by each committee. The business of this joint committee will be to price all prescriptions in accordance with the drug tariff, and to furnish to the respective committees the data required to enable them to pay the chemists and to prepare and furnish such statistics as may be required for the Panel Committees or for the use of the Insurance Committees. The committee is to employ a qualified pharmacist and the necessary pricing staff and secure office accommodation. The staff of the Manchester Insurance Committee, now engaged on similar work, will be utilized, with any additional staff required, and the prescriptions of the two Insurance Committees will, so far as practicable, be dealt with concurrently. The procedure will be that indicated by the Commissioners in their circular 220/I.C., the prescribed data being furnished to the respective committees prior to the end of the month in which the preceding month's scripts have been dealt with. It is also provided that should the Panel Committee of either area require the scripts of a particular doctor for the purpose of investigation application must be made through the Insurance Committee for the area. In the draft agreement it is provided that the joint committee shall consist of four members—two from each committee—and the contribution of each committee towards the expenses is to be in proportion to the number of prescriptions sent to be priced by each committee; any question arising which cannot be settled by mutual agreement is to be referred to the Commissioners for decision. On representations being made to the Commissioners by either of the two committees, the Commissioners may, if they consider it expedient, determine the agreement at any time on giving three months' notice to each committee, but otherwise either of the committees may only determine the agreement at the end of any year later than the year 1918, and only on giving the other committee three months' notice. It is estimated that there will be about 1,652,000 prescriptions to be priced annually, and that the

cost will be about £1,112, which is at the rate of 13s. 6d. per 1,000 prescriptions. This is a considerable increase on the joint cost for 1914, which in the case of Manchester was £604 for 1,200,000 scripts—that is, 10s. 0.8d. per 1,000; and in the case of Salford £125 for 335,000 scripts—that is, 7s. 5.55d. per 1,000. The increase is due to the extra work required under the new scheme and the additional statistics to be furnished to Panel Committees, but it will obviate a great part of the expenses which previously had to be met by Panel and Pharmaceutical Committees and will very materially lessen the work which formerly fell on the chemists, as they will no longer need to price their scripts themselves before sending them in to the committee.

For the use of the pricing staffs the Commissioners have now issued a ready reckoner for quickly arriving at the prices of the ingredients of prescriptions to the second place of decimals. It occupies twenty-four foolscap pages of figures, with two pages of description as to their use, and a page is also devoted to an account of the twenty-three varieties of dispensing fees, which will probably be a source of endless questions and disputes. The ready reckoner will undoubtedly save much trouble to the pricing staffs, with a consequent saving of expense, but one cannot help feeling that in the years to come it will be regarded, with the cumbrous system for which it stands, as a curious relic of antiquity.

THE DERBYSHIRE INSURANCE COMMITTEE.

COMPLAINTS are made as to the inconsiderate way in which the Derbyshire Insurance Committee is treating the panel practitioners of its area. A short time ago the Committee addressed a letter to the Panel Committee asking for its formal approval of a new rule that the term "Rep. mist." should not be used in the future. Under the new regulations, however, the Committee is required first to consult the Panel Committee and if, after consultation, it decides to abolish the use of this term, the Panel Committee has a right to appeal to the Commissioners with regard to any exceptions or qualifications of the rule on which the two committees cannot agree, and the Insurance Committee must give not less than fourteen days' notice to practitioners of its intention to bring the rule into operation. In the present instance the Derbyshire Insurance Committee appears to have simply sent a letter asking the Panel Committee for its formal approval of the abolition of the term "Rep. mist.," and the Panel Committee replied by carrying unanimously a resolution that "the term 'Rep. mist.' should not be abolished until the war is over." It is evident that the Insurance Committee has simply attempted to rush the matter utterly regardless of the wishes of the Panel Committee.

Again the Insurance Committee has notified every panel practitioner of its area that "from this date (December 31st, 1915) no registration will take place in partnership names." It is questionable whether this is legal. In the "Explanatory statement as to medical benefit as affecting practitioners" sent to all practitioners by the Commissioners in December, 1912, Section XI states that the panel doctor will be required to give personal attendance to the insured on his list, or, when unable personally to attend, may employ any other practitioner whether on the panel or not—either a partner, or assistant, or locum tenens—as his deputy, and the section then proceeds: "Practitioners practising in partnership may, if they desire, have the fact of the partnership indicated in the published list of practitioners on the panel, so that an insured person may in effect select the firm as his medical attendants." If this does not mean that registration may take place in partnership names, it is nothing more or less than a sort of bait to entice practitioners to swallow the hook.

This is not the first occasion on which it has been proved that the explanatory statement of the Commissioners threw a false glamour over the medical service which, when once its object was attained, has been destroyed by the officiousness of not a few Insurance Committees, of which the Derbyshire Committee is a notable example. The dissatisfaction that is resulting among the panel practitioners of the Derbyshire area is quickly reaching such a pitch that many of them are seriously discussing the question of resigning in a body from the panel, or of withdrawing from their undertaking to do the panel work of medical men who have joined the army. It is clearly useless for the Commissioners, even when they may be so

inclined, to do anything in the interests of panel practitioners if they blind themselves to the fact that officious interference by Insurance Committees may nullify their good intentions, or at least throw suspicion on any explanatory statements that may be issued by the Commissioners.

THE WORK OF PANEL PRACTITIONERS.

The Medical Secretary of the British Medical Association, 429, Strand, would be glad to have from panel practitioners a note as to their work in 1915 stating:

Number of insured persons on his list.
" of patients seen.
" of visits.
" of surgery attendances.

Drs. Fuller and Bell (Tollington Park and Crouch End) have supplied the following statistics of work done under the Insurance Act during 1915:

Number of patients on list	2,300
Attendances at surgery and consultations	7,772
Visits	1,058

Dr. W. O. McKane (Cleethorpes) has forwarded the following particulars of work done under the Insurance Act during 1915:

Approximate number on panel	950
Number of visits paid	905
Number of attendances at surgery	2,588
Total attendances for the year	3,493

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeon E. H. Meaden to the *Vivid*, additional; P. H. Bannister, M.B., to the *Victory*, additional; L. E. Dartnell to the *Impregnable*. Staff Surgeons J. O'Hea to the *Cumberland*, W. L. Hawkins to the *President*, additional; W. E. Gribbell to the *Vivid*, additional. Temporary Surgeon T. C. Russell to Haslar Hospital, L. S. Goss to the *Janet*, G. W. King and J. C. H. Allan, M.B., to the *Vivid*, additional. To be temporary Surgeons: G. L. Attwater, A. C. McAllister, M.B., H. Ellis, W. E. Wade.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon L. C. D. Irvine to the *Vivid*, additional. Surgeon-Probationers T. G. Campbell to the *Lucifer*, J. E. Kerr to the *Miranda*.

ARMY MEDICAL SERVICE.

Colonel G. D. Hunter, D.S.O., to be temporary Surgeon-General whilst a Director of Medical Services.

ROYAL ARMY MEDICAL CORPS.

Major to be temporary Lieutenant-Colonel whilst in command of field ambulances: P. J. Hanath, E. H. M. Moore. D. R. O'Sullivan-Beare, M.D., to be temporary Lieutenant-Colonel. To be temporary Captains: W. B. Cosens, temporary Lieutenant A. Gilmour, M.D., Major F. Cathcart, M.D., from unattached list of the T.F.; M. J. Rees, M.D., F. A. Bainbridge, M.D.

Temporary Captain J. Edgar, M.D., relinquishes his commission. Temporary Lieutenants to be temporary Captains: J. La F. Lauder, E. L. Shelton-Jones, J. W. Grace, A. E. A. Burkhard, R. P. McDonnell, F.R.C.S.I., H. W. Turner, W. H. Clements, J. D. Driberg, F.R.C.S., E. L. M. Hackett, C. L. Morgan, M.D., N. P. L. Lumb, D. C. Robertson, M.B., B. A. Hughes, M.D., A. H. Greg, M.B., F.R.C.S., J. E. Rutherford, M.B., A. Grant, M.B., G. D. Sherwood, A. E. Hodgson, M.D., J. Lang, M.B., H. B. Day, M.D., T. B. Marshall, M.B., D. Brough, M.B., T. L. Butler, G. F. Darker, M.D., H. G. Fessel, M.D., H. P. Harpur, M.B., J. Fettes, M.B., R. C. Leonard, M.D., B. C. Tennent, M.D., W. E. David, M.B., W. T. James, M.B., D. Heron, F.R.C.S.E., H. R. Pollock, B. E. Wall, M.B., F. J. Hunt, M.B., A. Jones, M.D., R. Y. Hones, M.B., F.R.C.S.E., G. O. Maw, B. F. Jones, A. Hines, M.B., W. Parsons.

Lieutenants of the Canadian A.M.C. to be temporary Lieutenants: R. Proctor, M.D., G. S. Clancy, M.D.

Temporary Lieutenants relinquish their commissions: P. Reid, M.B., P. J. Maguire, J. D. Cherry, C. E. Pepper, M.B., J. L. Annan, M.B., W. Garton, H. E. Clarke, R. W. Greatorex, M.B., R. E. Nisbett, A. N. Houghton, M.B.

To be temporary Lieutenants: J. B. Dunning, M.B., J. A. Thomson, M.B., F. B. Pinniger, M.D., J. R. Briscoe, M.B., A. R. Jordan, M.B., F.R.C.S., B. L. Bell, G. B. S. Soper, J. Dunbar, M.B., G. Sutherland, M.B., F. L. Spalding, V. S. Partridge, F. de C. Potter, H. Bond, W. R. H. Smith, M.D., R. D. Bell, M.B., J. W. H. Boyd, M.B., H. Speirs, M.D., F.R.C.S.E., A. L. Pentland-Smith, M.B., W. A. Cochran, M.B., H. A. R. E. Unwin, M.B., F.R.C.S., W. H. Gray, D. M. Hanson, W. G. Parker, M.B., H. Child, R. H. W. Garle, J. R. Payne, S. McComb, M.B., J. S. Johnson, M.B., H. Farncombe, M.B., A. Stewart, M.B., P. B. Harrison, D. Manson, M.B., J. Massey, M.B., J. B. Cunningham, M.B., A. E. Jackson, M.D., M. J. Harkin, M.B., A. M. Mitchell, M.B., J. E. J. R. Kelly, A. M. Masters, M.D., J. E. Buck, R. J. Mayberry, M.B., B. C. Eskell, M.B., A. C. Dixon, F. G. Heard, J. D. Mercer, D. L. Sewell, M.B., H. B. Billups, M.B., J. H. Addinsell, J. B. Randall, M.B., W. E. Waller, M.B., E. D. Murray, M.B., relinquishes his commission on appointment to I.M.S. Surgeon-Major E. B. Purves, from Lincolnshire Yeomanry, to be Major. The announcement of the resignation of Captain W. L. Griffiths, M.D., which appeared in the *London Gazette* of January 8th is cancelled. Lieutenants to be Captains: J. Wood, A. Silbermann. To be Lieutenants: W. H. Buckley, J. L. Hamilton, F. J. P. Saunders.

Vital Statistics.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 991 births and 782 deaths were registered during the week ended Saturday, January 1st. The annual rate of mortality in these towns, which had been 18.7, 19.7, and 17.0 per 1,000 in the three preceding weeks, rose to 17.4 in the week under notice, and was 0.8 per 1,000 above that recorded in the ninety-six large English towns. Among the several towns the death-rate ranged from 7.6 in Falkirk, 10.5 in Clydebank, and 11.8 in Perth, to 24.8 in Coatbridge, 27.0 in Hamilton, and 28.0 in Greenock. The mortality from the principal infective diseases averaged 1.6 per 1,000, and was highest in Coatbridge and Hamilton. The 329 deaths from all causes in Glasgow included 7 from scarlet fever, 6 from infantile diarrhoeal diseases, 4 from measles, 4 from diphtheria, and 1 from whooping-cough. Four deaths from scarlet fever, 3 from measles, and 2 from diphtheria were recorded in Edinburgh; 6 deaths from measles in Greenock, 5 in Coatbridge, and 5 in Hamilton; from scarlet fever 7 deaths in Aberdeen; from diphtheria 2 deaths in Paisley and 2 in Kirkcaldy; and from typhus 1 death in Dundee.

In the sixteen largest Scottish towns 1,193 births and 719 deaths were registered during the week ended Saturday, January 8th. The annual rate of mortality in these towns, which had been 19.7, 17.0, and 17.4 per 1,000 in the three preceding weeks, fell to 15.9 in the week under notice, but was 1.6 per 1,000 above that recorded in the ninety-six large English towns. Among the several towns the death-rate ranged from 10.7 in Hamilton, 12.6 in Clydebank, and 14.0 in Kilmarnock, to 19.0 in Aberdeen, 22.9 in Coatbridge, and 25.5 in Greenock. The mortality from the principal infective diseases averaged 1.6 per 1,000, and was highest in Aberdeen and Greenock. The 314 deaths from all causes in Glasgow included 5 from scarlet fever, 4 each from measles and diphtheria, 3 from infantile diarrhoea, and 1 from enteric fever. Six deaths from scarlet fever, 4 from diphtheria, and 3 from measles were recorded in Edinburgh; 4 deaths from diphtheria, 3 from whooping-cough, and 2 from scarlet fever in Aberdeen; 6 deaths from measles in Greenock; and 3 from diphtheria in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, January 1st, 502 births and 564 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 383 births and 396 deaths in the preceding period. These deaths represent a mortality of 24.3 per 1,000 of the aggregate population in the districts in question, as against 17.0 per 1,000 in the previous period. The mortality in these Irish areas was therefore 7.7 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 21.6 per 1,000 on population. As for mortality of individual localities, that in the Dublin registration area was 24.0 (as against an average of 22.6 for the previous four weeks), in Dublin city 26.0 (as against 24.0), in Belfast 25.1 (as against 20.8), in Cork 32.0 (as against 21.9), in Londonderry 13.9 (as against 19.3), in Limerick 16.2 (as against 12.6), and in Waterford 22.8 (as against 20.0). The zymotic death-rate was 2.6, as against 1.6 in the preceding period.

During the week ending Saturday, January 8th, 573 births and 463 deaths were registered in the nineteen principal urban districts of Ireland, as against 502 births and 564 deaths in the preceding period. These deaths represent a mortality of 21.0 per 1,000 of the aggregate population in the districts in question, as against 24.3 per 1,000 in the previous period. The mortality in these Irish areas was therefore 5.7 per 1,000 higher than the corresponding rate in the ninety-six English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 26.0 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 20.3 (as against an average of 22.1 for the previous four weeks), in Dublin city 22.0 (as against 23.9), in Belfast 19.8 (as against 21.8), in Cork 25.8 (as against 24.0), in Londonderry 20.2 (as against 18.5), in Limerick 17.6 (as against 14.2), and in Waterford 49.4 (as against 18.5). The zymotic death-rate was 1.4, as against 2.6 in the preceding period.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

- BIRKENHEAD BOROUGH HOSPITAL.**—House-Surgeon and Junior House-Surgeon. Salaries, £200 and £170 respectively.
- BIRMINGHAM GENERAL DISPENSARY.**—Resident Medical Officer. Salary, £250 per annum.
- BRISTOL ROYAL INFIRMARY.**—(1) House-Physicians; (2) House-Surgeons. Salary, £120 per annum in each case.
- BURY INFIRMARY.**—Senior House-Surgeon. Salary, £250 per annum.
- DERBYSHIRE ROYAL INFIRMARY.**—House-Physician and Casualty Officer. Salary, £200 per annum.
- DEVONPORT: ROYAL ALBERT HOSPITAL.**—House-Surgeon. Salary, £150, and additional 2ls. weekly when working single-handed.
- DUNROSSNESS PARISH.**—Medical Officer and Vaccinator.
- EVELINA HOSPITAL FOR SICK CHILDREN, Southwark.**—Clinical Assistants in the Out-patient Departments.
- KIRKWALL: PARISH OF EDAY.**—Medical Officer.
- LEAMINGTON SPA: WARNEFORD GENERAL HOSPITAL.**—Second Resident Medical Officer. Salary, £150.
- LEEDS PUBLIC DISPENSARY.**—Lady Resident Medical Officer. Salary, £130 per annum.
- MAIDSTONE: WEST KENT GENERAL HOSPITAL.**—One Senior and One Junior House-Surgeon.

PROCEEDINGS OF COUNCIL.

THERE was a meeting of the Council, held at 429, Strand, W.C., on January 26th last.

Present:

<p>Mr. E. B. TURNER, London, (Chairman of Representative Meetings, in the Chair, afterwards)</p> <p>Dr. J. A. MACDONALD, LL.D., Taunton, Chairman of Council.</p> <p>Sir T. CLIFFORD ALLBUTT, K.C.B., F.R.S., President-elect.</p> <p>Dr. EDWIN RAYNER, Stockport, Treasurer.</p> <p>Dr. JOHN ADAMS, Glasgow</p> <p>Lieut.-Colonel Sir JAMES BARR, M.D., LL.D., Liverpool</p> <p>Dr. M. G. BIGGS, London</p> <p>Lieut.-Colonel R. A. BOLAM, Newcastle-on-Tyne</p> <p>Mr. H. B. BRACKENBURY, London</p> <p>Dr. H. J. CAMPBELL, Bradford</p> <p>Major RUSSELL COOMBE, Netley</p> <p>Dr. J. SINGLETON DARLING, Lurgan</p> <p>Major A. C. FARQUHARSON, Newcastle-on-Tyne</p> <p>Lieut. F. ROWLAND FOTHERGILL, Hove</p> <p>Major JAMES GALLOWAY, London</p> <p>Mr. T. W. H. GARSTANG, Altrincham</p> <p>Dr. J. J. GIUSANI, Cork</p> <p>Dr. JOHN GORDON, Aberdeen</p>	<p>Dr. MAJOR GREENWOOD, London</p> <p>Dr. J. R. HAMILTON, Hawick</p> <p>Mr. N. BISHOP HARMAN, London</p> <p>Dr. G. E. HASLIP, London</p> <p>Mr. R. J. JOHNSTONE, Belfast</p> <p>Captain F. CHARLES LARKIN, Liverpool</p> <p>Major ALBERT LUCAS, Birmingham</p> <p>Fleet Surgeon F. D. LUMLEY, R.N. (Royal Navy Medical Service)</p> <p>Dr. H. C. MACTIER, Wolverhampton</p> <p>Captain J. E. MOORHOUSE, Stirling</p> <p>Major GEORGE PARKER, Bristol</p> <p>Major F. J. SMITH, London</p> <p>Mr. T. JENNER VERRALL, LL.D., Bath</p> <p>Dr. O. R. M. WOOD, Woolpit</p>
---	---

APOLOGIES.

Surgeon-General P. H. Benson, Mr. E. J. Domville, Dr. David Ewart, Dr. Adam Fulton, Dr. T. A. Goodfellow, Mr. James Green, Major T. Duncan Greenlees, Dr. W. Ainslie Hollis, Dr. J. Munro Moir, and Dr. W. Johnson Smyth were unavoidably prevented from attending.

DEATHS.

The Chairman was requested to convey to the relatives of Professor A. H. White, of Dublin, and Dr. G. A. Heron, of London, former members of Council, expressions of sympathy in their bereavement.

RESIGNATION.

The CHAIRMAN reported the resignation of Captain Tennyson Smith, the Representative of the Kent, Surrey, and Sussex grouped Branches, of his membership of the Council and Organization Committee. The necessary steps have been taken to fill the vacancy. (See notice on page 22.)

HONOURS TO FORMER MEMBERS OF COUNCIL.

The Council offered its congratulations to Sir James Porter, K.C.B., who for some time represented the Royal Navy Medical Service on the Council, on being created K.C.M.G.; and to Lieutenant-Colonel Montgomery-Smith on being mentioned in despatches.

APPOINTMENT OF SOLICITOR.

Mr. W. E. Hempson was reappointed Solicitor to the Association for a further period of one year as from April 1st, 1916.

FINANCE COMMITTEE.

The accounts for the quarter ending December 31st, 1915, amounting to £12,738 18s. 11d., were received and approved.

GRANT TO SCOTTISH MEDICAL SERVICE EMERGENCY COMMITTEE.

A sum of £100 was voted to the Scottish Medical Service Emergency Committee to assist in meeting the expenses it has incurred in its recruiting campaign for the Naval and Military Medical Services.

JOURNAL COMMITTEE.

The Journal Committee presented an important report on the alterations in the number of pages and in the quality of the paper of the JOURNAL. The report first called attention to the effect of the new postal rates for newspapers by which the weight of a periodical which could pass through the post at the $\frac{1}{2}$ d. rate was reduced to 6 oz. Even the smaller journals produced since the outbreak of the war had exceeded this weight, and the additional postage would have amounted to £35 a week, or £1,800 a year. To have kept each copy of the JOURNAL under the weight of 6 oz. while using the same paper, it would have been necessary to have still further reduced the size of the JOURNAL by twenty pages, making it 68 pages, including both reading matter and advertisements. Having regard to the fact that each week from 40 to 44 pages of advertisements were received this would have left only 24 to 28 pages for literary matter, including the SUPPLEMENT. It was decided that the literary pages could not be so diminished without seriously impairing the usefulness and prestige of the JOURNAL. It was therefore decided that the weight of the paper must be reduced, and after sundry experiments a paper was secured which allowed of a JOURNAL of the maximum size of 88 pages which would not exceed 6 oz. in weight, and would therefore be carried at the $\frac{1}{2}$ d. rate. This paper has been used since the first issue of November, and while its demerits are recognized it is believed that the best has been done in view of the uncertain conditions in the paper trade owing to the difficulties of procuring material, the diminished facilities for transport, and the steadily increasing shortage of labour. The price paid for paper since the war began, it was added, had steadily advanced, and although the primary reason for reducing the weight of the paper was the increase in the postal rates, had not this change been made the Association would have been faced with an increased expenditure of about £1,500 a year for paper. As the changed postal rates did not affect copies of the JOURNAL sent outside the United Kingdom, the same make of paper was being used for both the home and foreign editions.

The report pointed out that the indexes to the JOURNAL, EPITOME, and SUPPLEMENT, issued every half-year, usually occupied 64 pages. It had been decided, for convenience and economy, to publish the indexes

separately, and to intimate to members and subscribers that copies of the indexes could be obtained without charge on application.

The report also contained a reference to the decision, taken at the instance of the Central Medical War Committee, to refuse to accept any advertisements for vacant appointments which might assist in relegating to civil practice those who, in view of the national emergency, should be serving with the colours.

RESIGNATION OF MR. C. LOUIS TAYLOR, THE ASSISTANT EDITOR.

The Council, in accepting the resignation, on account of failing health, of Mr. C. Louis Taylor, the Assistant Editor, placed on record its deep appreciation of the valued services he had rendered to the Association and JOURNAL during the long period of thirty years.

ELECTION TO MEMBERSHIP.

Twenty-three candidates, whose names appeared on the notice convening the meeting, were duly elected members of the British Medical Association.

The remainder of the proceedings will be published next week.

Association Notices.

ELECTION OF COUNCIL, 1915-16.

NOTICE is hereby given that nominations for a candidate for election as a Member of Council by the Kent, Surrey, and Sussex (grouped) Branches for the year 1915-16, vice Dr. Tennyson Smith resigned, must be forwarded to reach the Financial Secretary and Business Manager, at the Office of the Association, not later than Saturday, February 19th. Each nomination must be on the prescribed form, copies of which will be furnished by the Financial Secretary and Business Manager upon application.

Separate forms have been prepared:

- (A) For a nomination by a Division, and
- (B) For a nomination by any three Members of a Branch respectively.

Those applying are requested to state for which purpose the form is desired.

An announcement of the Nominations received will be made in the JOURNAL of February 26th, 1916.

Elections will be by voting papers. These papers will contain the names of all duly nominated candidates, and will be issued from the Central Office on Saturday, February 26th, and will be returnable not later than Saturday, March 4th.

The result of the election will be published in the JOURNAL of March 11th, 1916.

By Order of the Council,

GUY ELLISTON,

Financial Secretary and Business Manager.

February 5th, 1916.

INSURANCE.

INQUIRIES BY THE INSURANCE COMMISSIONERS INTO CHARGES AGAINST PRACTITIONERS.

NOTTINGHAMSHIRE.

We have received from the National Health Insurance Commission (England), under cover of a letter from them dated the 1st February, their decision with regard to a case occurring in Nottingham and which was conveyed to the Clerk to the Nottingham Insurance Committee by a letter dated January 4th.

As the finding of the Commissioners appears to us to involve matter of some importance and general interest to the profession, we have deemed it well to reproduce the letter in full:

I.C. 93,606.

National Health Insurance Commission (England),

Buckingham Gate, London, S.W.,

4th January, 1916.

Sir,

I am directed by the National Health Insurance Commission (England) to state that they have had under consideration the Report of the Inquiry Committee constituted under Part IV of the Medical Benefit Regulations to inquire into the

representation made by the Nottingham Insurance Committee with respect to the continuance on the panel of Dr. H. E. Coghlan.

I am to inform you that on a full review of the facts stated, the Commissioners are not satisfied that the continuance of Dr. Coghlan on the panel would be prejudicial to the efficiency of the medical service of the insured, and they have decided, therefore, not to order his name to be removed from the panel. They have, however, arrived at this decision with considerable hesitation, and they desire to make it clear that in their opinion the Insurance Committee were justified in making the representation which they made to the Commissioners.

While, as stated above, the Commissioners are not of opinion that the facts set forth in the report are such as to warrant them to direct Dr. Coghlan's removal from the panel, they cannot but regard them as constituting a serious breach of the conditions upon which the Exchequer grant is made to the Committee, and they accordingly propose to withhold the sum of £50 (fifty pounds) from the grant which would otherwise be payable to the Committee in respect of the year 1915. As the Committee are aware, provision is made in Clause 13 (1) of their agreement with a practitioner to enable them to recover from him any sum which would otherwise have been payable to them towards the cost of providing medical benefit, and of which they have been deprived by his default.

I am, Sir, your obedient Servant,
(Sgd.) R. W. HARRIS.

The Clerk,
Nottingham Insurance Committee,
12, Victoria Street, Nottingham.

CERTIFICATES FOR CHRONIC INVALIDS.

It appears from correspondence that reaches us from time to time that there is still a large number of approved societies that require members who are chronic invalids receiving disablement benefit to furnish a certificate signed by their panel doctor every week and the suggestion of the Commissioners when the new system of certification was introduced that societies might well accept certificates at longer intervals, say monthly, thus saving both patient and doctor a considerable amount of trouble, appears to have been very generally disregarded. The excuse given by secretaries of societies is that the certificate is a guarantee not only that the patient is still a chronic invalid but that he remains unable to do even light work, and further it shows that he is still living, and in this way prevents fraudulent relatives continuing to draw the disablement benefit after the patient's death, which has actually occurred in more than one case. Such cases, however, can only occur where society officials or sick visitors are extremely negligent, and the requirement of the weekly certificate in cases, for example, of severe hemiplegia or other permanent disabilities can only be explained as an attempt to put on the medical profession the policeman duties which the society itself ought to carry out. As the agreement signed by all panel practitioners at present stands, the panel doctor has no alternative but to give a weekly certificate if required by the society. Many of the best societies have found that they have lost nothing by agreeing to accept monthly certificates in these cases, but in spite of any suggestions of the Commissioners or representations by the British Medical Association it is to be regretted that many local society officials seem to take pleasure in making the lot of both doctors and their own members as irksome as possible. Such societies will find that in the long run they gain nothing by being inconsiderate and disobliging.

INSURANCE FINANCE INQUIRY.

SIR GERALD RYAN, general manager of the Phoenix Assurance Company, and past president of the Institute of Actuaries, is to act as chairman of the Treasury Committee on the Insurance Act, the appointment of which was announced last week. The Committee is instructed—

To consider and report upon any amendments in the financial scheme of the National Insurance Acts which experience of the administration of sickness, disablement, and maternity benefits may suggest as desirable, within the existing limits of contributions and benefits, and apart from further Exchequer grants, before the completion of any valuations of approved societies; and, further, to consider how far the work of approved societies could be simplified and its cost reduced, without detriment to the interests of insured persons, by amendment of the Acts and Regulations; and to make recommendations thereon.

Among the other members of the Committee are Sir Alfred W. Watson, chief actuary of the Insurance Joint Committee; Mr. Ernest Woods, president of the Institute of Actuaries; members of the Insurance Commissions of England, Wales, Scotland, and Ireland; Mr. H. N. Bunbury,

C.B., of the Treasury; and twelve representatives of approved societies and trade unions, including two women.

It will be observed that the reference to the Committee does not include medical or sanatorium benefit, and we are informed that this omission is deliberate, the terms of reference being carefully framed to exclude altogether matters comprised within the terms and conditions of medical service under the Insurance Acts.

THE WORK OF PANEL PRACTITIONERS.

THE Medical Secretary of the British Medical Association, 429, Strand, would be glad to have from panel practitioners a note as to their work in 1915 stating:

- Number of insured persons on his list.
- " of patients seen.
- " of visits.
- " of surgery attendances.

LOCAL MEDICAL AND PANEL COMMITTEES.

COUNTY OF SURREY.

At a meeting of the Panel Committee on December 17th, 1915, a letter was read from the Insurance Committee, stating that it had decided to pay practitioners during 1916 quarterly instead of monthly. It was considered that it would have been more courteous if the Insurance Committee had consulted the Panel Committee before making this change, and it was decided to ask the Insurance Committee to reconsider its decision to make quarterly payments in cases in which the practitioner requested to be paid monthly, and, if it still adhered to the quarterly payments during 1916, to make an advance to practitioners in the middle of each quarter, instead of waiting till the end of the quarter.

The Honorary Secretary was also instructed to ask the Clerk of the Insurance Committee to obviate the delay in issuing medical cards to insured persons.

The Insurance Committee has furnished a list of insured persons on the panel of medical practitioners absent on military duty who do not wish to be attended by their deputies. It was decided to ask the practitioners desired by these persons if they would act as deputy for the absent practitioner without having the insured persons transferred to their lists.

LIVERPOOL.

At a meeting of the Panel Committee on December 21st, nine of the mixtures in the revised formulary were selected as stock mixtures, and the Honorary Secretary was directed to ascertain from the Pharmaceutical Committee whether these particular mixtures were capable of being stocked in bulk without deterioration.

At a meeting of the Committee on January 18th, the draft standing orders of Panel Committees as drawn up by the Commissioners were adopted with the modification that a Treasurer be appointed.

BIRMINGHAM.

At a meeting of the Panel Committee on January 4th authority was given to pay the expenses of members out of the Statutory Grant of the Medical Benefit Fund.

One practitioner from each ward was appointed to obtain information as to whether more doctors could be spared for war service.

COUNTY OF FORFAR.

At a meeting of the Local Medical Committee held on December 8th it was decided to protest against any attempt which may be made by the Parliamentary Retrenchment Committee to abolish the Scottish Insurance Commission should such action be necessary.

At a meeting of the Panel Committee held on the same day it was agreed to make arrangements whereby the services of a medical referee could be obtained by the Forfar Factory Workers' Union on the understanding that the referee or referees to be appointed were practitioners resident outwith the Burgh of Forfar, and that the rate of remuneration was 10s. 6d. per examination. A letter from the Secretary, Panel Medico-Political Union, relative to the payment of the balance of the fees due to practitioners for the year 1914, was allowed to lie on the table.

RENFREW COUNTY.

THE Executive Committee of the Panel Committee has examined all prescriptions criticized in the June report, and has not considered it necessary to make any inquiry

of the practitioners concerned. A letter from the Panel Medico-Political Union, inviting the Committee to accept the assistance of the Union with regard to a final settlement for 1914, has been allowed to lie on the table.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Deputy Surgeon-Generals G. A. Dreaper to the *Tamar*, additional, for Hong Kong Hospital; V. G. Thorpe and W. W. Prior to the *Vivid*, additional, for Plymouth Hospital; A. G. Willey to the *Cormorant*, additional, for Gibraltar Hospital; W. G. Axford to the *Victory*, additional, for Haslar Hospital. PROCEEDINGS OF COUNCIL.

LAST week we published an account of part of the business dealt with by the Council at its meeting on January 26th.

ORGANIZATION.

The Council agreed to the recommendation that the question of the Association becoming a federation for other medical bodies be deferred until six months after the end of the war.

ETHICAL

EXPULSION OF A MEMBER.

A member was expelled on the ground that his conduct was deemed to have been detrimental to the honour and interests of the Association.

APPEALS.

Two appeals against decisions of the Central Ethical Committee were considered. In one case the opinion of the Committee was upheld. The other case was postponed in order to enable one of the parties to the appeal to appear who was unable to be present at the meeting.

MEDICO-POLITICAL.

MEDICAL INSPECTION AND TREATMENT OF SCHOOL CHILDREN.

The Council resolved to recommend the Representative Body to approve without alteration, as the policy of the Association, the Memorandum placed before the Aberdeen meeting.

FRES. FOR MEDICAL CERTIFICATES GIVEN TO DEPENDANTS
OF SOLDIERS AND SAILORS KILLED IN ACTION, FOR
ESTABLISHING CLAIMS TO PENSION OR GRATUITY.

The Council is recommending to the Representative Body that with regard to certificates given for the above-mentioned purpose it is desirable in the interests of public economy and efficiency,

- (a) That there should be a uniform standard of estimating disability to earn; and
(b) That the work of certification should be done by a board of practitioners and should be paid for.

INSURANCE ACTS.

CONFERENCE OF LOCAL MEDICAL AND PANEL COMMITTEES.

The Insurance Acts Committee was empowered to consult the Local Medical and Panel Committees as to the desirability of holding a conference this year, and also to call such a conference if satisfied that it was generally desired.

EFFECTS OF THE WAR ON THE MEDICAL SIDE OF THE INSURANCE ACTS.

After consideration of a resolution of the Representative Meeting, 1915, on this subject, the Council passed the following resolution:

That the Council recommend the Representative Body to express the opinion that in view of the difficulty experienced in ascertaining the exact number of insured persons who have enlisted, and in collecting evidence as to the sickness

incidence of those insured persons remaining; and considering that strong representations on the subject have already been made to the Commissioners, no further action be taken at present; but that the Insurance Acts Committee be instructed to collect what information it can on the subject in order that it may be used when any revision of the terms on which insurance practitioners are employed is discussed.

SCOTLAND.

MIDWIVES ACT.

The Council received a report that the Midwives Bill for Scotland had at last become law, and that by its provisions the Scottish Committee of the Association was entitled to appoint two members to the Scottish Midwives Board. This is the first time, so far as can be ascertained, that the Association has been definitely acknowledged in an Act of Parliament.

The Scottish Committee has appointed on the Board: Dr. Wishart Kerr of Glasgow, and Dr. Michael Dewar of Edinburgh. They will retain office for five years as from January 1st, 1916.

IRELAND.

NATIONAL INSURANCE CERTIFICATION.

The Irish Committee reported the success of the efforts of the Irish Medical Committee in regard to the arrangements that have been made as to certification under the Insurance Acts. The Committee placed on record its belief that for this very satisfactory ending to a long dispute the profession in Ireland owed a debt of gratitude to the British Medical Association, both for its moral support and for the material advantage of the help of the Irish Medical Secretary, whose position enabled him to take up the fight untrammelled by professional ties.

IRISH MEDICAL WAR COMMITTEE.

The Irish Committee reported that an Irish Medical War Committee had been appointed, to which the Irish Medical Secretary was acting as assistant secretary, and that the Committee had been successful in inducing many men to apply for commissions in the Royal Army Medical Corps.

CENTRAL MEDICAL WAR COMMITTEE.

The following letter from the Director-General Army Medical Service to the Chairman of Council was read and ordered to be entered on the minutes:

War Office, Whitehall, S.W.,
24th January, 1916.

Dear Sir,

* I understand that a meeting of your Council is about to take place, and I desire to take this opportunity of asking you to express to the Council how deeply I am indebted to the Association for the aid which has been given to the Central Medical War Committee. In placing at the disposal of this Committee the organization of the Association, in affording it hospitality, and in many other ways, the Council has assisted it to undertake a difficult task and to accomplish a work of vital importance to the army and to the public.

I cannot let this occasion pass without acknowledging as warmly as possible the courtesy, as well as the patriotism, your Council has displayed.

I am, dear Sir, yours truly,

(Signed) ALFRED KEOGH,
Director-General, Army Medical Service.

The Chairman of Council,
British Medical Association.

The Committee presented a long and interesting report of its proceedings, most of which will appear in the Annual Report of Council. It was resolved that the following paragraphs of the report should be printed in the Proceedings of Council, as they relate to matters as to which there has apparently been misunderstanding on the part of the profession:

MEN OF MILITARY AGE EMPLOYED ON HOME SERVICE.

Considerable difficulties have arisen in regard to the position of practitioners who are under 45 years of age, and who have been employed on home service only. The Director-General was informed that many representations had been received by the Committee to the effect that the presence of these young men in home posts was seriously detrimental to recruiting for the R.A.M.C., as men in busy practices refused to believe that there was any urgent demand for officers so long as the military authorities could afford to employ these young men at home. The Director-General at once promised to remove this difficulty so far as he could, but pointed out that a great part of it was due to the fact that most of the men concerned were employed in Territorial hospitals over which he had not at that time complete control. In August last the Director-General was requested "to give instructions to D.D.M.S.'s and A.D.M.S.'s not to retain or accept for work in military hospitals at home medical practitioners of military age who were physically fit, but that they should encourage these practitioners to accept commissions in the R.A.M.C."; also that the same principle should apply to those practitioners who have signed the Imperial Service Declaration and who are at present at work in Red Cross and V.A.D. hospitals. To this the following reply was sent on September 3rd, 1915:

I am directed by Sir Alfred Keogh to inform you that the following policy will be adopted with regard to the engagement of medical men as temporarily commissioned officers in the R.A.M.C.:

1. No man under 45 years of age will be employed unless he undertakes general service obligations for a year, and is found to be physically fit for duty at home and abroad.
2. No man over 55 years of age will be accepted for home service.
3. No man under 45 years of age will be re-engaged after the expiration of his first contract unless he offers for general service.

I am to say that it is hoped that these restrictions will facilitate the work of the War Emergency Committee in setting free men of military age and providing for the older practitioners to look after their interests during their absence.

It will be noticed that the age for general service has been advanced by five years and that the age for home service only has been reduced by the same period.

It will be observed that nothing was said in the communication of the Committee as regards men who were not physically fit, but the War Office notified subsequently the exclusion from home commissioned service of all men who were not physically fit for general service, and this has given rise to dissatisfaction. Some of the men concerned who have held commissions, and who have been refused extension of them at the end of the year, have blamed the Committee for this exclusion; but the Committee has pointed out that the action of the War Office was decided on departmental grounds, and not at the request of the Committee, and that the Committee did in fact seek from the Director-General the re-employment of such men, and that therefore the Committee cannot be held responsible for the contracts not having been renewed.

The Portsmouth War Committee has asked that the following resolution should be placed before the Council:

This meeting of the Portsmouth Division is of opinion that, in advocating the dismissal of the very small number of C.M.D.'s from their military posts without any regard to the work they have done and are still doing in these posts, and in their civil appointments or to their physical fitness for foreign service, the Association (to whom the profession looks for protection of the interests of all its members) is guilty of aiding and abetting an injustice, and is promoting a policy which in no way meets the alleged deficiency of medical recruits to the R.A.M.C.

With regard to this resolution the Committee begs to state that the Director-General was asked to see that discretion is used with regard to those medical practitioners of military age who are physically unfit, and who are acting as civil medical practitioners in military posts, but the Committee adheres to its opinion that medical

practitioners who are of military age and are physically fit should not hold such posts.

QUESTION OF MORE ECONOMICAL USE OF MEDICAL MEN IN MILITARY SERVICE.

The Committee has been met in its recruiting efforts by widespread and repeated complaints that more medical officers are already in military service than are required for the needs of the service, and many instances have been given to show that military hospitals and military units in many places are overstaffed. This question has been very earnestly considered by the Committee, and has been the subject of many representations to the Director-General both by deputation and through Major Galloway. While the Committee believes that individual instances of wastage may be proved, it has been convinced by its communications with the Director-General that on the whole these complaints are due to ignorance of the larger questions of army medical administration. In the first place, as regards the alleged over-staffing at the front, the necessity for having ample reserves must not be overlooked. At present on the western front we are going through a period of what may be termed siege warfare, and no doubt in some quarters and at some times medical officers are not used to the extent that they would be if the nature of the warfare were different. But the Army Medical Service must be manned for forward movements, and the Director-General has assured the Committee that the personnel has been fixed with due regard to many years of experience both in our army and in other armies. The Committee feels that, after all, the responsibility must rest upon the military authorities, who would be blamed if at any given time it were found that there were not sufficient medical officers, and the Committee does not consider that it is wise or patriotic to question the decision of the military authorities, arrived at, as the Committee has good reason to know, after full consideration of the criticisms that have been offered.

The same considerations apply more or less to medical officers on home service. At present there are many men engaged at home who when the character of the warfare changes will be wanted at one of the fronts, and it is unreasonable to criticize the military authorities for employing these men at home in some capacity, even though they may not be fully employed, pending their being wanted more urgently elsewhere. Here again the necessity for having ample reserves must be emphasized, and the Committee cannot take the responsibility of urging the military authorities to refrain from recruiting medical officers that the authorities feel sure they will require, probably in the near future, merely because at the moment they cannot fully employ them. If it is said that in view of civilian difficulties practitioners should not be urged to join the army until it is known that they are urgently required, the reply is twofold. First, that medical like other officers are all the better for some preliminary military training and for the physical training and open-air life they get previous to their being required at the front; and secondly, that the Committee believes that if its enrolment scheme is a success and the Director-General is assured of a steady supply of medical officers as and when required, the calling away of more medical men from civilian practice to military life will be deferred as long as the military authorities feel it wise to do so.

In view of these considerations the Committee has felt it to be its duty not to encourage these criticisms and to ask the critics to trust the Director-General, who has shown every disposition to meet legitimate criticisms and to give full weight to the necessities of the civilian population. The military authorities must be trusted not to ask for more medical men than they feel to be absolutely necessary in the interests, either immediate or more remote, of the army. In the meantime the Committee will continue to place before the Director-General all such criticisms as it believes to be legitimate and which have not already been fully answered by him.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list.

Meetings of Branches and Divisions.

MIDLAND BRANCH: HOLLAND DIVISION.

A MEETING of the Holland Division was held on January 24th, when Dr. WHITE was in the chair.

Motor Lighting Restrictions.—A discussion took place on the motor lighting restrictions, but no proposition was brought forward.

Panel Practitioners and War Work.—Dr. TATE raised the question of the payment of the practitioners at home for the work they had done on the panel for those absent on war service. The matter was referred to the next meeting of the War Committee.

SUSSEX BRANCH: HORSHAM DIVISION.

At a meeting of the Division held at Horsham on January 15th the following officers of the Division were elected for 1916:

Chairman: F. W. D. Kinnair.
Vice-Chairman: S. P. Matthews.
Honorary Secretary: A. C. Sturdy.
Honorary Secretary (pro tem.): F. W. F. Kinnair.
Representative for Representative Meeting: Dr. W. A. Gosling.
Representative on Branch Council: F. Bonall.

INSURANCE.

INSURANCE COMMITTEES.

LONDON.

The Position of Panel Practitioners' Deputies.—At the meeting of the London Insurance Committee on January 27th some discussion took place upon the extent of the jurisdiction which the Committee possesses over the locumtenent of a panel practitioner absent on war service. The case of one such locumtenent was brought before the Committee in connexion with a charge of gross negligence, and the Medical Service Subcommittee investigating the matter had decided that the deputy's conduct was most reprehensible. Mr. Henry Mills, the chairman of the subcommittee, said that his subcommittee would not be satisfied until they had as much power over the deputy as they had over the practitioner. Mr. Kingsley Wood pointed out that the number of complaints against practitioners on the panel which had come before them that day was the largest in the history of the Committee, and he believed that most of the cases in which neglect was substantiated related to practitioners who had from 3,000 to 5,000 persons on their lists. The Special (War Emergency) Subcommittee reported that 171 practitioners on the London panel were now serving with His Majesty's Forces. In the majority of cases the arrangements made for their panel service appeared upon investigation to be satisfactory; in a few others where it seemed to the subcommittee that the deputy had undertaken greater responsibilities than he could adequately discharge, further inquiries were being made. In cases in which the deputy was not himself a panel practitioner, his attention was being drawn to the conditions of agreement between the practitioner and the Committee.

Sanatorium Treatment.—The Sanatorium Benefit Subcommittee reported that the number of insured persons suffering from tuberculosis who were receiving resident institutional treatment on December 31st was 430; the number receiving dispensary treatment was 784, and 1,504 were receiving domiciliary treatment.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

At a meeting of the Panel Committee on January 25th it was decided to draw the attention of the Insurance Commissioners to the need for a special grant to meet any administrative expenses incurred by the Committee in rendering effective the safeguards against excessive prescribing embodied in Article 9 of the Medical Benefit Regulations, 1916. The amount was estimated at £2,000. It was announced that the Local Medical Committee for the County of London was now identical in personnel with the Panel Committee, and that the one Committee is to be recognized as the Local Medical and Panel Committee.

WILTSHIRE.

At a meeting of the Panel Committee, held on January 19th, it was agreed to co-operate with other Panel Committees in forming a local pharmacopoeia for the South-Western area. It was resolved that practitioners should be allowed to make use of the term "Rep. mist.," its use being restricted to the current month and the date of the original prescription being given.

EAST SUFFOLK.

The Panel Committee decided to communicate with those practitioners who had overspent, pointing out that they were liable to be surcharged at the end of the year. It was decided to recommend the abolition of the practice of writing "Rep. mist.," and to ask the British Medical Association to make representations to the Commissioners that members of the Panel Committee be allowed their travelling expenses at the rate of 6d. per mile for the single journey.

INSURANCE NOTES.

THE PANEL SYSTEM OR A STATE SERVICE.

At the annual conference of the National Association of Trade Union Approved Societies, held at Manchester on February 1st, Mr. F. Handel Booth, M.P., expressed the view that the administration of medical benefit was unsatisfactory, and particularly the panel system, which, he thought, ought to be abolished and a State or partial State medical service substituted. He thought that the medical service ought to include every form of medical treatment that a man could require, and the money provided by the societies and the State was sufficient for a full service under a comprehensive scheme properly worked out. In other respects, too, he thought there was urgent need for the simplification of the machinery of the Insurance Act. Insurance Committees were far too large and the expenses of their administration far too high, while the cost of administration of approved societies was excessive. Amongst the resolutions passed by the conference there was one calling on the Government to proceed as soon as practicable with a scheme providing insured persons with medical treatment under State or municipal control.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeons W. J. Colbourne to R.M.A. Eastney; R. Hill, C.V.O., to the *Iron Duke* and for general staff duties; M. R. L. Rodd to R.M. Infirmary, Deal; E. Sutton to the hospital ship *Phosny*. Staff Surgeon T. Creaser, M.B., to the *Boadicea*. Surgeon K. H. Hole to the *Mardstone*. Temporary Surgeons T. Beaton, M.B., and H. S. Sington to the *Pembroke*, additional, for Chatham Hospital; L. B. Stringer and C. E. Kinderley to the *Victory*, additional, for Haslar Hospital; F. T. Cassidy, M.B., to the *Vicid*, additional, for Plymouth Hospital; H. E. Hewat, M.B., to the *Euryalus*; J. S. Macdonald to the *Hyacinth*, additional.

ROYAL NAVAL VOLUNTEER RESERVE.

Staff Surgeon R. J. Willan, M.B., to the *Plussy*, vice Lawson; Surgeon J. H. Thompson, to the *Victory*, additional; Surgeon Probationer F. H. Smith to the *Achates*. To be Surgeon Probationers: W. Shearer, J. Hale, H. T. Cubbon, J. A. L. Cook, W. E. M. Wardill, P. Banbury, F. V. Jaques, A. C. Halliwell, C. R. Downing, A. H. Henry, F. H. Richards, R. D. Lockhart, J. M. Higginton, A. D. McHaffie, J. J. Nolan, E. S. Orme, T. L. Hillier, J. P. S. Walker, F. N. Reynolds.

ARMY MEDICAL SERVICE.

Lieutenant-Colonel C. W. Proffit, M.B., to be temporary Colonel whilst an Assistant Director of Medical Services. The name of Lieutenant-Colonel (temporary Colonel) F. R. Buswell is as now described, and not as in the *London Gazette* of January 6th. Lieutenant-Colonel A. E. Garrod, M.D., F.R.S., R.A.M.C.(T.F.), to be temporary Colonel (substituted for notice printed in the *London Gazette* of November 26th, 1915).

ROYAL ARMY MEDICAL CORPS.

Majors retained on Active List under the provisions of Articles 120 and 522, Royal Warrant for Pay and Promotion: D. E. Powell, W. A. S. J. Graham.

Captain D. S. B. Thomson, half-pay list, to be Major. Temporary Captain E. L. Middleton relinquishes his commission. To be temporary Captains: Captain B. G. Elliott, East Lancashire Regiment (T.F.); Captain J. M. D. Scott, M.B., South African M.C.; temporary Lieutenant R. Brevitt-Taylor, M.B.; temporary Captain S. J. Scott, from Princess Victoria's (Royal Irish Fusiliers); G. Graham, M.D.

Temporary Lieutenants to be temporary Captains: J. D. Finlay, M.B., W. Winslow, M.B., A. C. D. Firth, M.D., C. H. Philips, T. J. Kelly, O. J. H. Sharp, M.B., C. F. O. White, E. S. Dixon, M.B., W. Pritchard Airey, J. Morrison, M.B., J. C. Dunn, M.D., W. C. S. Wood, D. Watson, M.B., G. A. Maling, V.C., M.B., L. A. P. Burt, M.B., S. R. Mackenzie, M.D., A. Ryland, F.R.C.S.E., C. J. Glason, M.D., H. V. Doll, J. Tate, M.B., W. A. Taylor, M.D., A. W. H. Donaldson, M.B., J. F. Venables, M.B., E. B. Sunderland, C. W. Roe, F. C. Greig, J. P. Blockley, M.B., D. W. Beamish, W. Leslie, M.B., J. Parker, C. C. Beatty, W. A. Brown, M.B., R. H. Fothergill, M.B., D. M. MacManus, U. J. Bourke, H. N. Evvard, M.D.

Temporary Lieutenants relinquish their commissions: C. A. Smallhorn, M.B., H. W. Fankhauser, M.B., S. Reader, J. N. G. W. McDonald, F. L. Gill, M.B., P. Steele, M.D., F. J. Browne, M.B., F.R.C.S.E., A. H. Corley.

Temporary honorary Lieutenants to be temporary Lieutenants: E. J. Clark, M.B., W. J. Pearson, M.B., C. F. Macdonald. To be temporary Lieutenants: C. Cooper, W. H. Broughton, M. Campbell, M.D., W. Paul, M.B., W. Speedy, M.B., R. A. Warters, M.D.

G. Fitzgerald, M.B., V. D. Moffat, M.B., J. J. Clarke, R. E. Illingworth, A. D. Hunt, M.D., D. R. Taylor, M.B., A. W. Mather, M.B., A. C. Tait, C. W. C. Robinson, E. L. Christoffels, J. G. M. Molony, A. D. Buchanan, M.B., N. A. Roswell, M.D., W. D. D. Small, M.D., R. M. Hewitt, M.D., J. P. Fairley, R. Montgomery, M.D., L. T. Giles, M.B., F.R.C.S., H. C. Fox, M.B., E. W. Martin, M.B., C. S. Rivington, W. M. Muirhead, M.B., E. H. Cameron, M.B., F.R.C.S.E., J. Bain, M.B., W. B. Mercer, M.B., R. L. Watts, M.B., O. M. G. Elliott, N. Grace, M.D., S. Stockman, M.B., E. W. Craig, M.B., J. Oag, M.B., H. N. Ingham, M.B., F. J. Eagar, P. G. Temple, J. F. St. J. Annesley, M.D., A. H. Donaldson, M.B., J. M. Grier, M.B.
To be honorary Lieutenants: W. R. White-Cooper, H. W. Bennett, M.B.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Temporary Lieutenants to be Captains: W. J. Dowling, M.B., A. R. F. Clarke, M.B., A. J. Horne, M.B., N. L. Reis, M.B., C. E. H. Gater, D. C. Pim, M.B., F. R. S. Shaw, M.B., R. G. Blair, M.B., F. R. H. Mollan, G. Stanton, M.B., J. D. Proud, T. W. E. Elliott, M.B., J. O'S. Beveridge, M.B., A. J. Beveridge, M.B., S. D. Lodge, C. H. Brennan, E. N. H. Gray, J. A. Musgrave, T. McClurkin, M.B., T. Menzies, M.B., R. S. Cumming, M.B., D. H. Murray, M.B., W. A. Thompson, M.B., J. McKay, M.H., W. B. Foley, D. Dempster, M.B., T. Y. Barkley.

Lieutenant M. W. Waterson to be Captain, with seniority next below O. H. Mayor (substituted for notification published in the *London Gazette* of July 26th, 1915).

Lieutenant (on probation) T. E. B. Beatty is confirmed in his rank.

Cadet W. L. A. Harrison, London University Contingent, O.T.C., to be Lieutenant on probation.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

Captain A. Baxter, M.D., from Attached to Units other than Medical Units, to be Deputy Assistant Director of Medical Services, Mounted Division.

James Ewing, late Captain West Riding Field Ambulance and late temporary Captain R.A.M.C., to be Captain and a Deputy Assistant Director of Medical Services.

ROYAL ARMY MEDICAL CORPS.

London (City of London) Field Ambulance.—Lieutenant W. R. H. Heddy, to be Captain.

London (City of London) General Hospital.—Lieutenant J. D. L. Currie to be Captain.

London General Hospital.—J. A. Willett, M.D., to be Lieutenant.

London (City of London) Sanitary Company.—To be Lieutenants: J. Teare, M.B., F. E. W. Rogers.

London Sanitary Company.—Lieutenants to be Captains: J. O. W. Barratt, M.D., H. G. Moss, N. A. Dore, J. Mair, M.B. To be Lieutenants: S. Summerson, E. P. Wheeler.

Home Counties Field Ambulance.—R. H. Hardwick to be Lieutenant.

Southern General Hospital.—Lieutenants to be Captains: C. B. Hawthorne, J. Millard.

Welsh Border Mounted Brigade Field Ambulance.—Major J. B. Yeoman, M.D., F.R.C.S., from A.M.S., to be Major.

South Midland Field Ambulance.—Lieutenant E. J. C. Groves, M.B., is restored to the establishment.

North Midland Casualty Clearing Station.—N. H. Hill to be Lieutenant.

Notts and Derby Mounted Brigade Field Ambulance.—Lieutenant J. W. Rammell to be Captain.

Northern General Hospital.—Lieutenants to be Captains: A. J. W. Stephen, M.B., R. A. Hooper, M.B.

Yorkshire Mounted Brigade Field Ambulance.—Lieutenant A. M. Deane to be Captain.

West Lancashire Field Ambulance.—Captain E. W. Reed, M.B., from Attached to Units other than Medical Units, to be Captain.

West Lancashire Casualty Clearing Station.—Lieutenant T. Aspinall to be Captain; Lieutenant E. M. de Jong, from Attached to Units other than Medical Units, to be Lieutenant.

Highland Field Ambulance.—Lieutenants to be Captains: A. M. Baillie, M.B., and J. A. Sellar, M.B.

Attached to Units other than Medical Units.—Major T. Beard resigns his commission on account of ill health. Lieutenants to be Captains: A. G. Osborn, M.B., S. Hughes, F. J. Davidson.

ST. PETER'S HOSPITAL FOR STONE, Etc., Henrietta Street, W.C.—Junior House-Surgeon. Salary, £75 per annum.

SUNDERLAND ROYAL INFIRMARY.—Lady House-Surgeon. Salary, £150 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL.—Assistant House-Surgeon. Salary, £120 per annum.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—(1) House-Physician. (2) House-Surgeon.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Aghadowey (Londonderry), Clackmannan (Clackmannan), Lyndhurst (Hants), Newbridge (Kildare), Sedburgh (Yorks., West Ridings).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

CURL, S. W., M.D. Cantab., M.R.C.P. Lo-d., Consulting Physician to the Clacton Cottage Hospital, vice Eustace Smith, M.D., deceased.

MACFADYEN, N., M.B. Lond., Certifying Factory Surgeon for the Baldoak District, co. Hertford.

WILLOUGHBY, W. M., M.D. Camb., D.P.H., Medical Officer of Health for the Port of London, vice Herbert Williams, M.D. Lond., deceased.

WYSE, G. H., L.R.C.P. and S. Edin., Certifying Factory Surgeon for the Lytham District, co. Lancaster.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

FLEMING.—To Dr. and Mrs. Fleming, Tsinan Fu Union Medical College, Shantung, N. China, on January 6th, a son, named Graham.

WOOLLATT.—On February 7th, at High Oak Lodge, Ware, the wife of Percy C. Woollatt, F.R.C.S.E., Temporary Surgeon, Royal Navy, of a daughter (Lillian Christine).

DEATH.

HOPKINS.—On February 2nd, at the Hoe Mansion Hotel, Plymouth, Francis Gethin Hopkins, M.D., Trin. Coll. Dub., Lieut. R.A.M.C., formerly P.M.O. Gold Coast Colony.

DIARY FOR THE WEEK.

TUESDAY.

LONDON DERMATOLOGICAL SOCIETY, 49, Leicester Square, W.C.—4.30 p.m., Cases and Demonstrations. 5.30 p.m., Dr. W. Knowlesley Sibley: Treatment of Scars.

ROYAL SOCIETY OF MEDICINE:

SECTION OF MEDICINE, THERAPEUTICS, AND PHARMACOLOGY (Joint Meeting), 5 p.m.—Dr. Langdon Brown, Sir William Osler, Sir Wilmot Herringham, Mr. Mackenzie Wallis, Drs. Galloway, R. G. Abercrombie, R. A. Chisolm, and W. Mair: Discussion on "Trench Nephritis."

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF HISTORY OF MEDICINE, 5 p.m.—Papers: Mr. C. E. Wallis: Marat. Mr. Percy Dunn: An Oculist of XVI Century (Andreas Laurentius). Dr. Dan McKenzie: Folk Cures by Constriction and Rings. Dr. C. G. Cumston (Geneva): Portrait of Paracelsus.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF DERMATOLOGY, 4.30 p.m.—Cases.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF OTOTOLOGY, 5.0 p.m.—Cases and Specimens; Dr. Dan McKenzie: Otogenic Facial Paralysis.

SECTION OF ELECTRO-THERAPEUTICS, 8.30 p.m.—Clinical Meeting, Cases, Skiagrams, and New Apparatus.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
FEBRUARY.	
11 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
18 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
23 Wed.	London: Central Medical War Committee, 2 p.m.
25 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £120 per annum in each case.

COVENTRY AND WARWICKSHIRE HOSPITAL.—Third Resident. Salary, £175 per annum.

DEVONPORT: ROYAL ALBERT HOSPITAL.—House-Surgeon. Salary, £150, and additional 21s. weekly when working single-handed.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—(1) House-Physician. (2) House-Surgeon. Salary, £160 per annum.

HASTINGS: EAST SUSSEX HOSPITAL.—Honorary Surgeon.

KIRKWALL: PARISH OF EDAY.—Medical Officer

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £150 per annum.

LONDON LOCK HOSPITAL, Dean Street, Soho, W.—House-Surgeon. Salary, £150 per annum.

MANCHESTER CHILDREN'S HOSPITAL.—Resident Medical Officer. Salary, £100 per annum, and £5 monthly bonus during the war.

NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—Female Senior Clinical Assistants in out-patient department.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—(1) Radiographer and Medical Electrician. Salary, £100 per annum. (2) Curator of Museum (female).

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

THE NEED AND PURPOSE OF ENROLMENT.

MEMBERS of the Central Medical War Committee had an interview on February 14th with a number of London men who were anxious to learn first hand the reasons for the request of the Committee that every medical man of military age (under 45 years) should enrol with the Committee as willing to take a commission in the R.A.M.C. if and when he is wanted.

It appears that some little confusion had arisen owing to differences in the military age for medical men and for the general community respectively. It was explained that the limit of age for general service—that is to say, any service at home or abroad—was fixed by the War Office authorities at 45 years for medical men. For the combatant ranks the limit was fixed for most branches at 41 years, and that is the age in the Military Service Act. The words in the Act are, "Every male British subject who on August 15th, 1915, was ordinarily resident in Great Britain... and had not attained the age of 41 years, and on November 2nd, 1915, was unmarried or was a widower without any child dependent on him." The higher age for the medical men, it was pointed out, had no relation to that Act, nor to any scheme of compulsion. It meant only that since the demand for doctors for the army was great and the needs of the civilian population insistent the net had to be spread the wider. Difficulties arising out of the enrolment scheme itself were discussed. It was explained that the man who signed the forms issued by the Committee entered into a moral obligation or bargain with the Committee. He said in effect, "I am willing to do my duty by my country when I am needed, and I look to this Committee of my profession to tell me when I am actually needed." His signature was a promise to hold to that bargain. The Committee on its part undertook to take into consideration the personal difficulties of the man, the nature of his practice and civil obligations, and only to make necessary calls in such a fashion that, so far as was humanly possible, the sacrifice asked for should be evenly distributed. It was pointed out that there were only two possibilities at present before the profession. One was the resumption of the "catch-as-catch-can" method of recruiting medical officers, which was very likely to produce the maximum difficulty in carrying on the medical work of the home community with resultant confusion and mayhap State intervention. The other was the enrolment scheme of the Committee, which was the professional counterpart of the Derby scheme for combatants. It was urged that it was on all counts better for the profession to keep in its own hands such a serious matter as this rather than allow the control to drift into lay hands, whether civilian or military.

We are informed that on February 15th the same gentlemen had an interview with the Under Secretary of State for War, who was accompanied by the D.G., A.M.S. They met with the same sympathetic reception as from the Central War Committee, and have announced that it seems to them desirable to postpone further steps towards

securing more general service from the medical profession until the Central Medical War Committee's canvass for enrolment is completed.

IRISH MEDICAL WAR COMMITTEE.

A meeting of the Irish Medical War Committee was held at the Royal College of Physicians of Ireland on February 1st, when Mr. McDowell Cosgrave, P.R.C.P.I., was in the chair, and the following members were present: Dr. C. Bigger, Dr. D. J. Coffey, the Right Hon. M. F. Cox, M.D., Mr. Conway Dwyer, P.R.C.S.I., Professor Dixon, Dr. McWalter, R.A.M.C., Dr. J. Carroll, Dr. R. J. Rowlette, Dr. M. R. J. Hayes, Honorary Secretary, and Dr. T. Hennessy, Deputy Secretary.

The meeting lasted for some hours, and it was decided to send a circular letter, similar to that already sent by the Central Medical War Committee, to each member of the medical profession in Ireland who was within the age limit, appealing to him to join the Royal Army Medical Corps. The Committee also decided to invite the co-operation of all local medical bodies to assist recruiting for the Royal Army Medical Corps, and to make provisions for the conduct and safeguarding of the practice of the doctors joining the Royal Army Medical Corps.

Mr. John Redmond, M.P., who with the Lord Lieutenant (Lord Wimborne) recently addressed a large recruiting conference at the Mansion House, Dublin, stated that whatever doubt may be expressed about the success of recruiting amongst certain classes of the Irish population, there was not the least doubt—and he mentioned it with pride—that the Irish doctors had, in proportion to population, supplied more than their share.

MEDICAL RECRUITING AND THE ALLEGED WASTE OF MEDICAL OFFICERS.

SIR,—There are so many rumours concerning the poor use to which the men who have already accepted commissions in the R.A.M.C. are put, that even now, in spite of the W. 10 appeal which the Central Medical War Committee has issued, I believe a great many doctors are still undecided as to the necessity of enrolling their names as willing to serve if called upon.

At present there is no compulsion in the matter, except in the case of single men 40 years old and under, but surely there is an obvious moral obligation on all doctors, married or single, up to the age of 45 years to send their names up to this Committee, at the same time giving advantages and disadvantages of their personal position as regards liabilities, physical fitness, etc. The actual needs of the civil population can best be judged of by the local Medical War Committees. The adjudicating of individual cases as to the sacrifices of one man as compared with another can surely be best left in the hands of such an unprejudiced committee as the Central Medical War Committee, whose members have given clear and unmistakable evidence of their great sympathy for such members of the profession who may be called upon to make these sacrifices.

Assuming that every doctor up to 45 years of age admits this moral obligation and enrolls, then the profession would all be attested, and the Medical War Committee, which is practically the medical tribunal of appeal, would be in a very strong position to do its work with fairness to all.

No one could feel that he was called up for service before his more fortunately placed colleagues. If a number of men do not enrol, I think the only name they will rightly earn for themselves is "slacker." Some may object to trusting their private affairs and position to this committee, which I have heard designated as the "Recruiting Agency of the War Office," but if they really took the trouble to inquire into its inception, into its just claim for truly representing the profession, into its record of work, they would at least be sure of this, that there could be no other committee formed to which they could apply so confidently for equitable consideration of the whole subject of medical recruiting.

I myself think that the War Office should make more use of part time service.—I am, etc.,

London, S.W., Feb. 16th.

G. BREBNER SCOTT.

EXAMINATION OF RECRUITS.

"Observer" writes: The present method of selecting medical men for examination of "Derby" recruits is certainly not in accord with the published views of the Central Medical War Committee. It appears that a chief medical examiner is appointed for each district, and the selection of assistants is left entirely in his hands. In this town all the medical men selected for this work are of military age. Other medical men above military age have offered their services, but have been ignored. May I suggest that the chief examiner in each district be requested to send the name, address, and age of each medical man in the district who offers his services to the Central Medical War Committee, by which body the selection shall be made?

THE PROFESSION IN VICTORIA.

With a view to organizing the medical profession of Victoria on a war footing, the Victoria Branch of the British Medical Association has taken a census of the profession in Victoria. Altogether down to August 12th 550 replies had been received, which after deducting those absent and serving abroad or otherwise engaged on military duty, practically accounted for the whole of the profession in Victoria. At that date there were serving with the Imperial Forces 65; with the Australian Forces, for the duration of the war 75, for twelve months 115; and as surgeon on a hospital or transport ship 106. A card catalogue of the names arranged in districts has made it possible to estimate how any particular district stands as regards its supply of medical men and whether any could be spared for war purposes.

THE NUMBER OF MEDICAL STUDENTS.

We are indebted to the President of the General Medical Council for the following statistics of the number of medical students in the United Kingdom. The table shows the number of first year students enrolled in 1915, distinguishing those who were women, or who were foreign or colonial students, or who were under 18. It also shows the number of first year and second year students in attendance at medical schools in January, 1916.

Summary of Returns from Schools of Medicine, January, 1916.

	England and Wales.			Scotland.	Ireland.	Total.
	London.	Pro- vinces.	Total.			
(a) No. of First Year medical students enrolled in 1915	359	384	743	693	499	1,935*
No. out of (a) who were women students	118	■	198	182	76	456
No. out of (a) who were foreign or colonial students	64	25	■	57	12	158
No. out of (a) who were under 18 on admission	66	■	165	170	106	441
(b) No. out of (a) who were in actual attendance in January, 1916	279	320	599	550	477	1,626
(c) No. of Second Year students who were in actual attendance in January, 1916	200	197	397	357	265	1,020

* Number registered by General Medical Council in 1915 was 1,918. Therefore the number of unregistered students in medical schools was 17 at least.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

STAFFORDSHIRE BRANCH.—Dr. Harold Hartley, Honorary General Secretary (Bosford, Stoke-on-Trent), gives notice that the second general meeting of the session will be held at the Swan Hotel, Stafford, on Thursday, February 24th. The president, Dr. F. M. Rowland, will take the chair at 5.15 p.m. Exhibition of living cases and pathological specimens. Papers: (1) The Incidence of Cancer in Meat-eating and in Vegetarian Peoples of India, by Mildred E. Staley; (2) Heart Disease among Children attending Elementary Schools, by John Priestley. Dinner at 7 p.m.; charge, 5s.

INSURANCE.

LOCAL MEDICAL AND PANEL COMMITTEES.

MIDDLESEX.

At a meeting of the Panel Committee on February 10th it was decided to draw attention in the next circular letter issued to practitioners on the panel to the necessity of adhering to the certification rules. A resolution was adopted endorsing the right of doctors to charge persons who, although insured persons on their lists, were unknown to them and gave no indication that they were insured persons.

ESSEX.

A SCHEME for the distribution of moneys between practitioners acting as deputies for practitioners absent on military service has been arranged by the Essex Panel Committee, but is not intended to supersede the local schemes already in use in some areas in Essex. One half the total capitation payments due to each practitioner on the panel who is absent and whose panel practice is not properly provided for is paid by the Insurance Committee to the "Treasurer Committee" of the Panel Committee quarter by quarter, and is distributed by it to the deputies doing the work, less the actual cost of distribution, on the following basis:

The total amount available in respect of each absentee is distributed amongst the practitioners who have undertaken to attend to any of the said absentee's panel patients in proportion to the number of panel patients of the said absentee for which each deputy shall have made himself responsible at the end of each quarter. Each deputy is required to abide by the rules decided upon by the Panel Committee.

The Committee has objected to an emergency settlement in any form, and has asked the Commissioners to remove the anomaly of a doctor being required to give six weeks' notice that he does not desire to undertake treatment in the succeeding year of any insured person on his list, whereas an insured person is only required to give a month's notice that he desires to select another practitioner.

SURREY.

At a meeting of the Panel Committee on January 21st it was decided to inform practitioners in the next circular that if any doctor has special reasons for desiring a monthly advance his application would be favourably considered, and to ask practitioners going on military service to inform the honorary secretary what arrangements they were making for their panel patients.

LANCASHIRE.

At a meeting of the County Local Medical and Panel Committee held on January 19th it was decided that "provision of proper and sufficient medicines" as contemplated by the 1911 Act does not include the supply of salvarsan, vaccines, serums, etc., and that the use of the term "Rep. mist." be limited to reference to prescriptions issued in detail during the month in which the formula is made use of.

LIVERPOOL.

At a meeting of the Panel Committee on February 1st it was decided that the present time, when so many of those interested are absent from their practices on military duty, was inopportune for the consideration of any change, as suggested by the Insurance Committee, in the method of distribution among panel practitioners of the sum due for sanatorium benefit (domiciliary treatment).

A CORRECTION: PAYMENT OF EXPENSES.

In the notice of the meeting of the Birmingham Panel Committee on January 4th, published in the SUPPLEMENT of February 5th, p. 23, it should have been stated that it was agreed that Panel Committees should be allowed when they wished to pay the expenses of their members out of the statutory grant of the Medical Benefit Fund, and not, as printed, that authority was given to pay expenses of the members of the Birmingham Panel Committee.

INSURANCE NOTES.

HANDBOOKS FOR APPROVED SOCIETIES.

OFFICIALS of the societies throughout England will undoubtedly welcome the *Handbook for the Use of Approved Societies* which has been issued by the Commissioners. It is expressly stated in the preface to be a provisional issue only, to be replaced as soon as possible after the end of the war by a more complete handbook. The main object of the book is to provide officials of approved societies with a book of information on procedure, and to afford assistance in the application of the provisions of the Acts and regulations, and suggestions for the efficient administration of societies' affairs. A somewhat serious, though apparently unavoidable, defect is, as stated in the preface, that several circulars were issued while it was in such an advanced state of preparation that they could only be printed in a supplement, and alterations in the text of the book which they involved could not be made without delaying publication. Thus it happens that in several points the text is contradicted by the circulars given in the supplement, and officials of societies will have to find out for themselves where the text is erroneous. This was the position in September last, which is the date of the preface, and possibly even further amendment of the text is now necessary owing to still later circulars. It appears to be quite impossible to keep any publication dealing with National Health Insurance fully up to date.

After an introduction giving broadly the position of approved societies under the insurance, the constitution and government of societies and the general conditions of membership are stated, and the method of dealing with contributions and with sickness, disablement, and maternity benefits are described in detail. Some especially valuable instructions are given as to procedure in dealing with persons receiving compensation on account of accidents at work, and with sailors and soldiers totally disabled in the present war. Considerable space is devoted to the question of certification, and it would well repay every panel doctor to read carefully the full and detailed account of certification, especially what is said about the procedure in exceptional cases. Medical and sanatorium benefits are only dealt with so far as they directly concern procedure of societies and their members, but special attention by paragraphs printed in heavy type is directed to the importance of the early notification by societies of the suspension of a member from medical and sanatorium benefit on account of arrears or other causes. There is some reason to think that some societies are negligent on this point, and that members often receive medical treatment when they are not entitled to it. Special chapters are next devoted to "arrears" and to the intricate finance of societies, followed by a final chapter dealing with miscellaneous matters. Next come a number of appendices giving full tables of contributions and benefits for all classes of members, copies of model letters, notices and agreements, list of the addresses of Insurance Committees, sanatoriums, rules for medical certification, etc. The supplement gives copies of the circulars which had been issued up to September last, after the descriptive part of the book had received its final form. They deal with alterations in the registers consequent on changes in membership, persons engaged in temporary non-insurable employments connected with the war, and the new system of collecting contributions of army (Class B) members. A full index is provided, and the book will be practically indispensable to all who are in any way engaged in the administration of the health insurance.

A Scottish edition of the *Handbook* has also been issued, which is practically on the same lines as the English edition, the arrangements of chapters and paragraphs being identical in both. The Scottish Commissioners, of course, replace the English Commissioners where necessary, and the lists of sanatoriums, Insurance Committees, etc., apply to Scotland. Otherwise practically all the remarks made above apply equally to both editions.

INSURANCE FINANCE INQUIRY.

The first meeting of the Treasury Committee, appointed to report on any amendments in the financial scheme of the Insurance Acts which experience of the administration of sickness, disablement, and maternity benefits may suggest to be desirable, was held last week. It is hinted that it may be possible for the Committee to make recommendations for the consideration of Parliament during the ensuing session.

PAYMENT FOR TEMPORARY RESIDENTS.

DISGUSTED writes: I have attended a considerable number of temporary residents under the Insurance Act, dating back to the beginning of 1914. We are now in January, 1916, and I have not received payment for any of them. It is scandalous that medical men are treated in this fashion by the Insurance Commissioners, who take care to get their pound of flesh from

the panel practitioners under the Act. Can nothing be done to compel them to pay—and without further delay—accounts for 1914 for temporary residents, and also intimate to them that accounts for 1915 must be paid before June 30th of this year? It is only by stern and united action that we will be able to compel the Commissioners to fulfil their part of the contract with the panel practitioners in a more satisfactory manner than at present.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeon G. M. Levis to the *Pembroke*, additional; Surgeon A. E. Painter to the *Pembroke*; Temporary Surgeons D. M. Connan, J. A. Pendergast to the *Victory*, additional; for Plymouth Hospital: H. B. Carhill, M.D., G. L. Atwater, A. O. Courts, H. V. Deakin, to the *Victory*, additional; for Haslar Hospital: A. G. Brown, M.B., to the *New Zealand*, Lt. F. Strugnell to the *Magnie*, H. G. Sutcliffe, M.D., to Deal R. M. Infirmary, T. S. Gibson to the Naval Medical School, Greenwich College; H. T. Degee to the *Argonaut*; H. Wetherbee to the *Victory*, additional, for disposal; W. E. Miligan, M.B., to the *Soudan*; H. S. Jeffries to the *Cormorant*, additional, for Ascension Hospital; A. B. G. Underwood, M.B., and J. O. Gillies, M.B., to the *Pembroke*, additional, for Chatham Hospital; C. F. G. Wakeley to Queensferry Sick Quarters, vice Williams; A. G. Williams to the *Attentive*.

ROYAL NAVAL VOLUNTEER RESERVE.

Staff Surgeon W. B. Betenson to the *Pembroke*, additional.

ARMY MEDICAL SERVICE.

Temporary Lieutenant-Colonel P. B. Giles, C.B., R.A.M.C., to be temporary Colonel.

ROYAL ARMY MEDICAL CORPS.

Temporary Major B. S. Myers, M.D., relinquishes his commission on appointment to the New Zealand Medical Corps.

Temporary Captains to be temporary Majors: A. N. Minus, whilst commanding 39th Field Ambulance; R. H. Cooper.

Temporary Captains relinquish their commissions: J. Ewing, C. G. Whorlow, H. Munro, M.B., F. A. Cooke, M.D.

Temporary Captain F. W. Mackenzie, M.B., is placed temporarily on retired pay on account of ill health.

Lieutenant D. V. M. Adams, M.B., Reserve of Officers, to be Captain.

Temporary Lieutenants to be temporary Captains: H. S. de Roer, G. A. C. Gordon, M.B., D. Green, M.B., F.R.C.S., C. Banting, M.D., F.R.C.S., R. W. Murphy, M.D., W. G. Ridgway, F.R.C.S.I., R. A. Wright, B. M. Collard, T. J. H. Maguire, M.B., B. H. Barton, M.D., G. F. Barr, M.B., P. H. MacDonald, M.B., G. L. Wigan, M.B., J. C. Robb, M.B., W. S. Heron, M.B., R. MacGrath, M.B., C. N. Vaisey, L. A. Drake, M.B., H. J. Cotter, T. S. Goodwin, M.B., J. S. Prentice, M.B., W. J. A. B. Wishart, M.B., W. S. Lindsay, M.B., G. Davidson, M.B., G. T. Crogan, M.B., H. S. Stockton, C. de C. Pelletier, J. R. Lee, M.D., F.R.C.S.E., G. C. Adeney, M.B., F.R.C.S., T. P. Devlin, late Captain R.F.A.T.F.F., S. T. Davies, F. Barnes, J. L. Leggat, M.B., J. M. Harkey, M.B., S. J. Ormond, M.D., E. Marshall, M.B., J. Stephenson, M.B., R. M. Boyd, M.B., E. Kidd, M.B., J. M. Rishworth, M.B., W. R. S. Watkins, M.B., F.R.C.S.E., T. J. L. Thompson, M.B., C. H. Nash, F. D. Walker, M.B., R. H. Hutchinson, T. L. Jewell, M.D., B. C. Ewens, D. Forde, M.D., D. F. Curran, C. P. V. MacCormack, H. S. C. Hooper, A. Poole, M.B., G. Robinson, J. Hill, M.B., J. P. Lavery, J. B. Turner, M.B.

To be temporary Captains: R. S. Berry, late temporary Captain R.A.M.C., J. R. Williamson, M.D., late temporary Captain, I.M.S.

Temporary honorary Lieutenant O. G. Morgan to be temporary honorary Captain whilst serving with the No. 9 British Red Cross (Duchess of Sutherland's) Hospital.

Temporary honorary Lieutenant A. C. Inman, M.B., to be temporary honorary Captain.

Temporary Lieutenants relinquishing their commissions: A. E. Towley, M.B., H. F. Smith, M.D., W. M. Thomas, A. F. G. Codd, M.B., F.R.C.S., H. Armstrong, G. de P. D'Amico, M.D., R. N. Goach, F.R.C.S., G. O. Jacobsen, M. P. Thomas, G. M. De Vries, M.B., J. R. McGilvray, M.B., J. Ellison, M.B., T. Marron, W. C. Burns, M.D., A. F. W. Millar, M.B.

Lieutenants of the Canadian A.M.C. to be temporary Lieutenants: M. O. Bridgman, M.D., A. McNally, M.B., A. E. McCulloch, M.B., G. J. Hanley, M.D., C. B. Cameron, M.D., W. G. G. Coulter, W. Dixon, M.B., J. E. Bromley, M.D., C. G. McRidd, G. H. Kearney, M.D.

Temporary honorary Lieutenants to be temporary Lieutenants: F. K. Marriott, E. G. Barker, G. W. Huggins, R. B. Eadie, M.B., J. S. Leslie, T. C. Howie, M.B.

To be temporary Lieutenants: J. A. Thoms, M.B., H. W. Barber, M.B., E. C. Sparrow, M.B., A. H. Ernst, R. N. Craig, A. H. G. Burton, M.D., W. G. Porter, M.D., J. A. MacArthur, M.B., W. M. Nairn, M.B., J. W. Potter, M.B., A. Whitome, M.B., F.R.C.S.E., E. G. Wheat, M.D., J. F. Brown, M.B.

To be temporary honorary Lieutenants: H. Lewis, L. M. Davies, J. G. Jones, A. Sunderland, A. Wilson, L. Gameson, M.B., F. B. O'R. Phillips.

INDIAN MEDICAL SERVICE.

Lieutenant-Colonel W. W. Clemencha, M.D., Officiating Sanitary Commissioner with the Government of India, is appointed substantially *pro tempore* to that post with effect from November 9th, 1915.

Colonel G. J. H. Bell, C.I.E., Inspector-General of Prisons, Burma, is appointed to be Inspector-General of Civil Hospitals, Bihar and Orissa, with effect from the date of his assuming charge.

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

Captains to be temporary Majors: J. C. Fyfe, W. A. Burgess. To be temporary Captains: L. F. Jones, J. W. Hunt, A. Cleghorn, Lieutenant F. Ferras, J. W. Wickware, M.D., G. M. Wallace, M.D.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenants to be Captains: R. G. McElney, M.B., I. G. M. Firth, C. G. Schurr, J. W. Malcolm, M.B., J. S. Armstrong, M.B., E. S. Rowbotham, C. D. Jarvis, M.B.

¹ *Handbook for the Use of Approved Societies* (English edition): Provisional Issue revised to August, 1915. (324 pp. Price 1s.)

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

Colonel J. Harper, M.D., from A.M.S., to be Colonel.
Lieutenant-Colonel G. F. Gubbin, retired pay, from Deputy Assistant Director of Medical Services, to be Assistant Director of Medical Services, London Division, with the temporary rank of Colonel.

Captain C. H. Gregory, M.D., from Home Counties Field Ambulance, to be Deputy Assistant Director of Medical Services, Home Counties Division.

ROYAL ARMY MEDICAL CORPS.

Highland Field Ambulance.—To be Captains: Captain H. G. Bruce, M.B., from Attached to Units other than Medical Units; Lieutenant W. C. D. Wilson.

Lowland Field Ambulance.—Lieutenant R. Kyle, M.D., to be Captain.

Northern General Hospital.—Lieutenants to be Captains: W. Longley, I. C. Marshall, M.D.

Notts and Derby Mounted Brigade Field Ambulance.—Lieutenants to be Captains: D. W. Griffiths, W. Bailey-Thomson, M.B.

North Midland Casualty Clearing Station.—C. Cooke, M.B., to be Lieutenant.

South Midland Field Ambulance.—Lieutenant E. J. C. Groves, M.B., to be Captain.

East Anglian Field Ambulance.—Lieutenant W. J. Wilkinson to be Captain.

Heme Counties Field Ambulance.—Captain H. C. Barr, from Attached to Units other than Medical Units, to be Captain.

London Field Ambulance.—Lieutenant-Colonel M. Taylor, M.B., relinquishes his commission on account of ill health.

Wessex Casualty Clearing Station.—Captain A. C. Alport, M.B., South African Medical Corps (Reserve), to be Captain.

Wessex Field Ambulance.—Captain J. G. Macindoe, M.B., to be Major.

Welsh Dordoir Mounted Brigade Field Ambulance.—Lieutenant H. C. Gilmore to be Captain.

Attached to Units other than Medical Units.—To be Majors: R. B. Williamson, M.B., late Lieutenant-Colonel Duke of Wellington's (West Riding Regiment); G. W. McIntosh, M.B., late Captain Black Watch (Royal Highlanders); Major J. G. Macindoe, from Wessex Field Ambulance; Captain S. Martin, M.B., Captain R. Lindsay, M.B.

To be Captain: Captain H. E. McCready, M.D., from South Midland Field Ambulance. To be Lieutenant: J. Lilwall-Cormac.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM MATERNITY HOSPITAL.—Resident House-Surgeon (female). Salary, £100 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £120 per annum in each case.

CAMBRIDGESHIRE ASYLUM, Fulbourn.—Junior Assistant Medical Officer (male). Salary, £200 per annum, rising to £250.

CHARING CROSS HOSPITAL. Medical and Surgical Registrars.

COVENTRY AND WARWICKSHIRE HOSPITAL.—Third Resident. Salary, £175 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—(1) House-Physician. (2) House-Surgeon. Salary, £150 per annum.

GREENWICH UNION.—Assistant Medical Officer for Infirmary and Workhouse. Salary, £175 per annum.

HAMPSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.—Three Anaesthetists. Honorarium, £25 per annum.

KIRKSTALL PARISH OF EDAY.—Medical Officer.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

MANCHESTER CITY.—Second Assistant Medical Officer at Baguley Sanatorium for Treatment of Tuberculosis. Salary, £250 per annum.

NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—Assistant Anaesthetist (female). Honorarium, £55s. per annum.

PORTSMOUTH: ROYAL PORTSMOUTH HOSPITAL.—Two Lady House-Surgeons. Salary, £150 per annum.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—Radiographer and Medical Electrician. Salary, £100 per annum.

ST. PETER'S HOSPITAL FOR STONE, Etc., Henrietta Street, W.C.—Junior House-Surgeon. Salary, £75 per annum.

SALFORD POOR LAW UNION INFIRMARY.—Male Resident Assistant Medical Officer. Salary, £300 per annum; and if reappointed, £350.

SALFORD ROYAL HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary, £250 and £200 per annum respectively.

SAMARITAN HOSPITAL, Marylebone Road, N.W.—Honorary Dental Surgeon.

WESTERN GENERAL DISPENSARY, Marylebone Road, N.W.—Resident House-Surgeon.

WEST BROMWICH AND DISTRICT HOSPITAL.—Assistant House-Surgeon. Salary, £120 per annum.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—House-Physician and House-Surgeon.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Barrow-in-Furness (Lancaster), Fintona (Tyne), Staplehurst (Kent).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

ARMSTRONG, Hubert, M.D. Vict. and Liverp., Captain R.A.M.C.(T.), Honorary Physician, Liverpool Infirmary for Children, vice N. P. Marsh, M.R., M.R.C.S. (deceased).

BOLT, G. V., M.B., B.C. Cantab., Certifying Factory Surgeon for the Hoddesdon District, co. Hertford.

WILLIAMS, John McGeagh, M.D. Berl., D.P.H. Manch., Tuberculosis Officer for Warwickshire and Coventry.

ST. THOMAS'S HOSPITAL.—The following appointments have been made: Casualty Officers and Resident Anaesthetists: T. Anwyl-Davies, M.R.C.S., L.R.C.P.; S. L. Bhatia, B.A. Cantab., M.R.C.S., L.R.C.P.; F. E. O'R. Phillips, B.A. Cantab., M.R.C.S., L.R.C.P.; L. M. Davies, B.A. Oxon., M.R.C.S., L.R.C.P. Casualty Officers: D. C. Bluet, L. A. Cheson, M.R.C.S., L.R.C.P.; J. Forest Smith, F. H. Vey, W. Marriott, Resident House-Surgeons: J. C. N. Harris, C. B. Hyman, E. H. V. Hensley, H. G. Storer, House-Surgeon to Block 8 and Resident Anaesthetist: W. H. C. Romanis, B.A., M.B., B.C. Cantab., F.R.C.S. Eng. Obstetric House-Physician: (senior) F. E. Higgins, B.A. Cantab., M.R.C.S., L.R.C.P. Ophthalmic House-Surgeon: N. S. Nairne.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

GOOD.—On February 9th, at The Hurst, Harborne, Birmingham, to Dr. and Mrs. J. Percy Good—a daughter.

MARRIAGES.

JEFFREY-PAGE-ROBERTS.—On January 10th, at Strathfieldsaye, by the Very Rev. the Dean of Salisbury, uncle of the bride, assisted by the Rev. E. C. Hetherington, Rector of Silchester, cousin of the bride, John Jeffrey, M.B., F.R.C.S. Eng., Jeddburgh, to Cicely Frederica, daughter of the Rev. F. Page-Roberts, M.A., Rector of Strathfieldsaye.

PASCO-ROBY.—On February 12th, at St. Matthew's Church, Upper Clapton, by the Rev. Walter Cottrell, M.A., assisted by the Rev. O. B. Dawson, M.A., the Vicar, Bernard Charles William Pasco, M.R.C.S., L.R.C.P. (Lieutenant R.A.M.C.), son of Mr. and Mrs. William John Pasco of Mill Hill, Middlesex, to Annie, daughter of Mr. and Mrs. George W. Roby of Stamford Hill, N.

PEARSON-EARL.—On February 14th, at St. Augustine's, Norwich, Dr. S. V. Pearson of Mundesley, to May Elizabeth, youngest daughter of Mr. and Mrs. Earl of Norwich.

DEATHS.

LAKIN.—On February 10th, at Leicester, Charles Lakin, L.R.C.P. Edin., aged 67 years.

TURNER.—On February 15th, 1916, at 6, Eton Terrace, Edinburgh, after a short illness, Sir William Turner, K.C.B., F.R.S., Principal and Vice-Chancellor of the University of Edinburgh, in his eighty-fifth year. (No flowers, by special request.)

WILLIAMS.—On February 12th, T. Hammond Williams, L.R.C.P. Edin. and L.M., L.F.P.S. Glas. and L.M., Castle House, Oswestry, aged 55 years.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 9 p.m.—Second Lethsonian Lecture: The Effects of High Explosives on the Central Nervous System, by Major Fred. W. Motl, M.D. Lond., Hon. LL.D. Edin., F.R.S.

WEDNESDAY.

HUNTERIAN SOCIETY, 1, Wimpole Street, W., 9 p.m.—Demonstration of Gynaecological Specimens by Dr. R. Drummond Maxwell.

THURSDAY.

HARVEIAN SOCIETY OF LONDON, Stafford Rooms, Titchborne Street, W., 8.30 p.m.—Discussion on Treatment of Gunshot Wounds, to be opened by Sir Berkeley Moynihan.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

CENTRAL MEDICAL WAR COMMITTEE.

The following circular (W. 22) has been issued by the Central Medical War Committee for England and Wales to Local Medical War Committees:

Dear Sir,

The Working of the Enrolment Scheme.

1. It is certain that a very large number of medical men will still be required for service in the R.A.M.C. The Central Medical War Committee is convinced that only through its enrolment scheme can the supply of medical officers for the Army be maintained and regulated with due regard for the needs of the civilian community and the difficulties of individual medical men. The scheme needs for its success the fullest co operation of the Local Medical War Committees, and a complete understanding of the methods to be adopted. Correspondence has been received which shows that there is much misapprehension of the intention and scope of the scheme.

Need for Every Medical Man to Enrol.

2. It is essential that every medical man of "military age" should enrol, even if he regards himself as "indispensable" to the medical service of the community in which he practises, or to the appointment he may happen to hold, or even if he considers that his private circumstances or health are such as to justify his exemption from service. He should sign the form of application for a commission without regard to any local military work that he may already have undertaken. It is not possible for any individual to arrive at an unbiased opinion on his own case, or as to whether he will best be serving the interests of the country by remaining in his own practice or by joining the R.A.M.C. The duty of obtaining the enrolment of every man of military age is the immediate and urgent work of the Central and Local Committees.

Procedure to be Adopted.

3. The Central Committee is addressing to every man of military age an invitation to sign the form of application for a commission in the R.A.M.C., and the authority to the Committee to use this form if and when necessary. The Local Committees will be informed of the names of any men in their area who have failed to apply for enrolment and will be asked to do their utmost to get them to enrol. Periodical lists of enrolments will be furnished to your Committee, the members of which should divide amongst themselves the names of such men as have not enrolled, and approach them personally or by letter.

Points to be Emphasised when Inviting Enrolment.

4. Enrolment does not necessarily mean that all or even the majority of men enrolled will be called upon for

service. Calls will only be made in accordance with the demands of the military authorities from time to time and with due consideration of the medical needs of each area and of the personal difficulties of each medical man. Calling up under the scheme will not be undertaken unless the response from men of military age throughout the country generally justifies it. No man will be called without full opportunity being given to him to lay his case before his Local Committee, and, if necessary, to appeal to the Central Committee. Complete enrolment of all men of medical age is desired, in order that only those who can most easily be spared will be called upon to undertake what is really the duty of every man who is physically fit and acceptable to the military authorities.

5. If it appears likely that the acceptance of a commission by any medical man will cause too great a disturbance of the medical attendance on the community in which he lives, or if personal difficulties, pecuniary or otherwise, render precarious the position of any medical man or of his dependants in the event of his taking service, such a man will be entitled on enrolment to set forth these difficulties to his Local Committee or, should he prefer it, to the Central Committee. But it is suggested that in the main such difficulties should be dealt with by the Local Committee, as the body to which the practitioner must look to safeguard his interests. Points on which the practitioner and the Local Committee differ, or points as to which the practitioner prefers not to consult a local body, can be referred to the Central Committee. Each committee will give the fullest consideration to all the difficulties laid before it, and, where circumstances justify such a course, the Central Committee will defer calling up the practitioner as long as is consistent with the needs of the country.

6. If a medical man has attested voluntarily under the Derby scheme, or will be deemed under the Military Service Act to have attested, his certificate of enrolment will prevent his being called upon for service in a combatant capacity. He will be told by the recruiting authorities that he will remain in the reserve until offered a commission in the R.A.M.C.

Duty of Local Committees to make Arrangements as to Practices of Men who accept Service.

7. Local Committees should think out very carefully the local position in order that they may be able to furnish the Central Committee with all the advice necessary when calls are made. They should make in advance as complete arrangements as possible for the conduct of the practices of all the men who in their opinion can be spared if it should become necessary to make the utmost demand possible from the civilian profession. Suggestions as to these arrangements will be found in the Appendix.

8. The Central Committee invites the assistance of your Committee in making enrolment a complete success, and this can only be done by obtaining the support of every medical man of military age in your district.

We are, yours faithfully,

N. BISHOP HARMAN,
ALFRED COX,

Secretaries.

429, Strand, London, W.C.,
February 17th, 1916.

* That is, from the medical standpoint, the age up to which the R.A.M.C. at present accepts men for commissions for general service—namely, up to the 40th birthday.

APPENDIX.

SUGGESTIONS AS TO ARRANGEMENTS WITH A VIEW
TO FACILITATING THE RELEASE OF MEDICAL
MEN FOR MILITARY SERVICE.

1. It will not do for the Local Committee to wait until men are called up before making their arrangements for the carrying on of the necessary work of attending the local community and protecting the interests of the men who are called up. Plans should be made beforehand based on the assumption that some at least of the local men will be withdrawn, and perhaps even, in the final event, all who could possibly be spared.

2. Such arrangements would vary in their nature in accordance with the call to be made on the area, but they must all be based on the necessity of equalizing as much as possible the inconvenience caused to the public in every area, and of protecting any practitioner who responds to the call of his country from avoidable hardship. The arrangements should be such that there could be no question of any such practitioner feeling that his colleagues who remain behind were profiting by his absence.

3. The arrangements previously suggested by the Central Committee as regards division of fees earned and the refusal to accept as patients those who have been attended for a man on service are already well known and have been adopted throughout the country. These arrangements appear to be accepted as equitable as affecting the current income of the practitioner absent on war service and also as affording sufficient protection for the goodwill of the practice in country districts and even in the smaller towns. But in the larger urban areas considerable difficulties may arise as regards the goodwill of practices. Having regard to the migratory character of town populations, and particularly the populations in the suburban areas of the great cities, many of those who were patients of a doctor when he went away will have moved out of the area before his return. In the ordinary course, if he were at home, their places would be taken by newcomers, but in his absence these will all go to his professional neighbours.

4. It has been suggested that this difficulty might be met by partnerships among the practitioners concerned limited to a period of years—say five. It is a matter of common knowledge that men in partnership can get through more work than the same men acting independently, so that such partnerships would be to the public advantage at a time like this. In such a temporary partnership of, say, five men in a district, it would be a comparatively easy thing for one or two of the partners to go on military service, putting into the partnership their military pay and each drawing as his income a share bearing the proportion to the total receipts that his income before leaving bore to the united incomes of all the partners. Goodwill would in such a case be preserved, as the absent practitioners would receive their due share of the income derived from any newcomers. By the time the partnership comes to an end the men who have been on service will have had the opportunity of re-establishing their connexion. Such a plan is of course revolutionary, but it is worth the serious consideration of the profession in cases in which it would be difficult in any other way to reassure practitioners whose departure on military service might mean very serious financial risk. It is worth consideration, too, as a means of convincing men who go that their colleagues have no desire to profit by their absence.

5. Another suggestion for local organization is the establishment of central surgeries at which the house work of a group of practitioners can be done with great economy of time and labour. This plan was first put into operation at Dundee, and has been found to work very satisfactorily.

Draft Dundee Scheme.

1. Establishment of a central office.
2. Establishment of a central dispensary. For this purpose the out-patient department of the infirmary has been kindly placed at the disposal of the Committee by the directors.
3. Any individual patient may, by arrangement between the representative of the absent doctor and another practitioner, be referred directly to that other practitioner. Such arrangement to be considered outside the scheme.
4. All messages from the patients of absent doctors to be sent to the central office.
5. It is proposed to distribute visits by locality and by rota amongst the doctors willing to participate in the scheme.
6. Consultations for patients who are able to attend at the dispensary to be conducted there. Consultation work at the infirmary it is proposed to perform by rota amongst those doctors who are to participate, each giving two hours, which may be from 5 to 7 or 7 to 9 on stated nights.
7. The doctors who have been called up have agreed to contribute for the expenses of the Committee.

8. The Local Medical Committee will engage the clerical assistance for keeping the necessary records, and the rest of the fund will be distributed amongst the doctors sharing in the work.

9. With regard to midwifery work, it is proposed to ask the maternity service of the infirmary to undertake this with the supervision of a medical staff. It is proposed to charge £1 ls. for each case, and to use this further remuneration for discharging the financial responsibility involved.

6. If the demands on the profession become much greater it will become necessary to consider some plan for redistributing some of the senior members of the profession. Statistics of the country generally show that there are some districts in which the number of general practitioners now available for attendance on the whole population is only one to 4,000, one to 5,000, or even in a few districts, one to 6,000 or more. Some of the general practitioners remaining in those districts are of military age. It is clear that they cannot be released for military service (consistently with proper regard for the needs of the civil population) unless their work can be taken over by practitioners who are over military age or otherwise unfit for military service, and who are at present resident elsewhere or engaged in other work than general practice. On the other hand, there are urban districts in which if every practitioner of military age joined the army there would still remain one general practitioner for 1,500 or 2,000 of the population. It is obvious that if practitioners in one of these latter districts who are not qualified for military service were to make arrangements for their work to be taken over by others in that district, and were to migrate temporarily to a district of the first type, they would be adding as effectively to the military resources of the country as though they joined the military forces, and such sacrifice as they made would be no greater than that made by those who in a similar position have joined the army.

7. The above suggestions are offered for the earnest consideration of the Local Committees. They raise questions of very great importance, which cannot be postponed in view of the prospect that the profession in every area may need in the interests of the country to be depleted very seriously before the war is over. The Central Committee trusts, therefore, that every Local Committee will consider the suggestions in relation to the needs of their own areas, and will favour the Central Committee with their views thereon, and with any other suggestions they may have for dealing with the general situation.

THE CHARACTER OF THE ENROLMENT FORMS.

We understand that in some quarters exception has been taken to the nature of the inquiries made on Form W.7 (particulars of civil surgeons desirous of service with the R.A.M.C.), which has been issued by the Central Medical War Committee with the circular letter of their appeal for enrolment to all medical men under the age of 45 years. Form W.7 is not one for which the Committee is in any way responsible. It is a War Office form, and the questions that are put down for answer are of the same character as the regular questions put to every applicant for a commission in any branch of His Majesty's forces. No doubt this explanation will meet such difficulties as those we have heard of.

THE LOCAL GOVERNMENT BOARD (ENGLAND
AND WALES).

The Local Government Board has issued the following circular to county councils, metropolitan borough councils, sanitary authorities (including port sanitary authorities), joint hospital boards and committees, and joint committees for appointing medical officers of health.

Local Government Board, Whitehall, S.W.,
18th February, 1916.

Sir,

I am directed by the Local Government Board to state that it has become necessary to make provisional arrangements for enabling every medical man of suitable age (45 and under), who can be spared from civil employment without serious injury to the civil population, to place himself at the disposal of the authorities; and to be prepared, if required, to take a commission in the army or navy in the near future. A representative committee of the medical profession, known as the Central Medical War Committee, has been formed to facilitate the carrying out of this object.

This Committee has asked the Board to supply them with a list of doctors of military age who are engaged in

public health work of local authorities, classified as follows:

1. Those who could be spared almost at once;
2. Those who might be spared later;
3. Those who cannot be spared.

To enable the Board to comply with this request, they will be glad if the authority will take the matter into their immediate consideration and supply the Board with the information indicated on the enclosed form. The authority in considering the matter must bear in mind the special importance of maintaining the public health at the present time, but subject to this they should be prepared to allow medical men of military age who are in their service to join the forces. In some areas a reduction of staff may be rendered feasible by co-operation between the county and district authorities, or between neighbouring authorities.

I am to add that by arrangement with the War Office, applications for commissions from medical officers of public health authorities are referred to the Board for their concurrence or otherwise, and in view of this arrangement the Board think that all such medical officers may properly enrol themselves under the scheme of the Central Medical War Committee.

I am, Sir, your obedient servant,
F. J. WILLIS,
Assistant Secretary.

The Clerk to the Local Authority.

A similar circular referring to doctors of military age employed in Poor Law institutions was issued by the Local Government Board to boards of guardians on February 23rd.

Association Notices.

ELECTION OF MEMBERS OF COUNCIL. BY BRANCHES NOT IN THE UNITED KINGDOM (1916-17 COUNCIL).

THE following nomination has been received from the under-mentioned Grouped Branches (By-law 49):

Hong Kong and China, and Malaya: Candidate, FRANCIS WILLIAM CLARK, M.D.

No other nomination having been received, Dr. Francis William Clark is duly elected a member of the 1916-17 Council.

CASUAL VACANCY (1915-16 COUNCIL).

The following nomination has been received from the under-mentioned Grouped Branches for the office of Member of Council, vacant by the resignation of Dr. Tennyson Smith:

Kent, Surrey, and Sussex: Candidate, CLAUDE WILSON, M.D., "Belmont," Church Road, Tunbridge Wells.

No other nomination having been received, Dr. Claude Wilson is duly elected a member of the 1915-16 Council.

By Order of the Council,
GUY ELLISTON,

Financial Secretary and Business Manager.

February 26th, 1916.

BRANCH AND DIVISION MEETINGS TO BE HELD.

WILTSHIRE BRANCH.—Dr. Frank F. Bond, Honorary Secretary (Court House, Trowbridge), gives notice that a meeting of the Branch will be held at the Town Hall, Trowbridge, on Saturday, March 4th, at 3.0 p.m. (1) Captain J. O. Symes, R.A.M.C.(T.): On the Diagnosis and Treatment of Medical Cases at a Base Hospital in this Country. Microscopic specimens of dysenteric organisms will be shown. (2) Consideration of revised ethical rules. Tea will be provided at the close of the meeting.

INSURANCE.

INSURANCE FUNDS.

THE National Health Insurance Funds Accounts for England, Wales, Scotland, and Ireland, issued last week, show for each of the four countries the receipts and payments during the period July 15th, 1912, to January 11th, 1914. As stated in the report of the Auditor-General which accompanies them, these are the first accounts. The contributions named in the accounts were payable from July, 1912, but, with the exception of sanatorium benefit which became operative from the commencement of the Act, benefits were not conferred until after a period of six months had elapsed. Thus the larger items of expenditure, namely, those for sickness, maternity and medical benefits are for a period of twelve months only out of the eighteen months covered by the accounts. Among the enormous mass of particulars given, the following as to England may be mentioned as of special interest:

ENGLAND.

	£
Sale of health insurance stamps at post offices	19,783,000
Exchequer grants	4,532,089
Payments to approved societies for sickness and maternity benefits and administration expenses	8,774,908
To Insurance Committees for benefits and administration expenses	4,623,287
To deposit contributors for sickness, maternity, and special benefits	15,726
To approved societies for investment	870,519
Gross contributions to approved societies	21,387,026
Exchequer grants to societies in respect of benefits and administration expenses	1,969,222
Gross contributions to the Navy and Army Fund	110,650
Gross contributions to Deposit Contributors Fund (with Exchequer grants of £7,356 in respect of contributions, and £3,122 in respect of benefits)	483,570
The General Medical Benefit Fund for England was as follows:	
Income from January 15th, 1913, to January 14th, 1914:	
From approved societies	2,384,825
From deposit contributors	57,251
From Navy and Army Insurance Fund	95
From Exchequer: Ordinary grant	728,729
From Exchequer: Special grant	1,300,226
Total income	4,471,128
Payments:	
To Insurance Committees for year 1913 in respect of medical benefit	4,384,149
To Central Medical Fund in respect of travellers	91
Balance	86,887

The General Sanatorium Benefit Fund for England for the period July 15th, 1912, to January 12th, 1914, was as follows:

Income:	
From approved societies	744,930
From deposit contributors	20,212
From Exchequer	272,729
Total income	1,037,871
Payments:	
To Insurance Committees in respect of sanatorium benefit	1,012,600
Central funds (travellers)	13
Balance	25,257

The total balances of all the funds amounted to £13,009,329, against which the Commissioners have investments with the National Debt Commissioners of £12,432,200. Cash at the Bank of England £200,872 and sundry other amounts to cover the balances.

SCOTLAND.

In an address to an approved Scottish society on February 19th the chairman of the Scottish Insurance Commissioners said that there were more than 1,500,000 insured persons in Scotland, of whom only about 3,000 were voluntarily insured. The amount received to the end of 1915 from all sources was nearly £9,000,000; it had been disposed of as follows: Nearly £2,000,000 to Insurance Committees for the payment of doctors and chemists, etc.; three and a quarter million to approved societies for the payments of benefits and the cost of administration; and half a million for investment by themselves; three and a half million invested by the Commissioners on behalf of the societies for reserves, and so on. Some societies would have a considerable surplus, others would just scrape through; and others, again, would possibly have a deficit. This was due to the option given to the societies; there could be no bankruptcy in the general sense, but societies which had been paying away too much at one period might have to pay less in another, and might have to make a levy. Married women had proved to be more costly to a society than other women, and women on the whole did not enjoy the same health as men. Some occupations also were more unhealthy than others. These matters would, he hoped, be examined by the committee of inquiry.

INSURANCE ACT IN PARLIAMENT.

DISTRICT INSURANCE COMMITTEES.

IN reply to Mr. Tyson Wilson, on February 22nd, the Chairman of the Joint Committee of Insurance Commissioners said that the activities of district insurance committees had in many areas been suspended in the interests of economy. The action taken in Lancashire, to which Mr. Wilson's question referred, was without prejudice to the future and had the strong support of the insurance committee for the county. Regard had to be had to the circumstances of each area.

The Treasury Committee.—Mr. Montagu has informed Mr. Booth that the question of opening to the public the meetings of the Treasury Committee appointed to examine the finance of the insurance scheme was one for determination by that Committee. It had held three meetings and was deliberating in private. In reply to Mr. Ernest Jardine he said that there were three women members of the Committee. It was not proposed to vary its composition.

PAYMENTS TO PRACTITIONERS.

DR. J. CULMER (Birmingham) writes: As there seems to be no prospect of panel moneys for 1914 and 1915 being paid—I refer, of course, to deductions owing—I would suggest that the B.M.A. should approach the Commissioners with the request that each doctor's arrears should be paid by Exchequer Bonds. That would be doing a bit for the Government and to us as well. Personally I am owed at the least £170 for the two years, a sum which I can ill afford to do without.

G. P. writes: On page 18 of the SUPPLEMENT of January 29th, under the Insurance Acts Committee, the last paragraph states that practically and to all intents and purposes no more pressure is to be brought to bear on the Insurance Commissioners over prompt payment of accounts until after the war is finished, which may be this year or next year or some other year.

Now, has this Committee ever asked itself what is the total amount owing for 1914 till 1915 to the practitioners as a whole? For this county for 1913 there is still over £1,000 to come in. For 1914 and 1915 there has been no payments made on account of mileage, of temporary patients, of balances of floating sixpences, of unallocated moneys, whilst the quarterly cheques are very excessively diminished.

If this is so over the whole country, there must be a million or more due to the practitioners, and I would like to ask the Committee if they have ever considered what the effect of being obliged to give this long credit has upon the financial status of the individual practitioner. Has the Committee any idea as to how many practitioners may have had to obtain overdrafts, loans, or reversions in order that they may meet their everyday expenses?

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Surgeon-General (temporary) G. R. Turner, F.R.C.S., to the *Vivid*, additional, for Plymouth Hospital, as Consulting Surgeon; Fleet Surgeon A. Gaskell, C.B., F.R.C.S., to the *Hyacinth*, additional, for Cape of Good Hope Hospital; H. L. Norris to the *Victory*. Surgeons: I. S. Gabe to the *Victorious*; A. G. Evans to the *Pembroke*, additional, for disposal. Temporary Surgeons: H. Whyte to the *Victory*, additional, for Haslar Hospital; H. E. K. Fretz to the *Colleen*, additional, for Haulbowline Hospital; J. Smith, M.B., to the *Pembroke*; C. Y. Eccles to Haslar Hospital; H. Danvers, M.D., to the *Victory*, additional, for disposal; R. Aiken, M.D., to the *Plassy*.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel M. O'Halloran is retained on the active list under the provisions of Articles 120 and '22, Royal Warrant for Pay and Promotion, and to be supernumerary.

Temporary honorary Lieutenant-Colonel R. T. Leiper, M.B., to be temporary Lieutenant-Colonel.

To be temporary Captains: J. R. H. Walker, M.D., late temporary Captain I.M.S.; E. Black; Lieutenant (temporary Captain) A. D. Clinch, M.D., from Dublin University O.T.C.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM MATERNITY HOSPITAL.—Resident House-Surgeon (female). Salary, £100 per annum.

BOLTON INFIRMARY AND DISPENSARY.—Second House-Surgeon. Salary, £200 per annum.

BRADFORD CITY.—Female Medical Officer (temporary). Salary, £8 8s. a week.

BRIDGWATER HOSPITAL.—House-Surgeon. Salary, £125 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURY INFIRMARY.—Junior House-Surgeon. Salary, £150 per annum.

CAMBRIDGESHIRE ASYLUM, Fulbourn.—Junior Assistant Medical Officer (male). Salary, £200 per annum, rising to £250

CHARING CROSS HOSPITAL.—Medical and Surgical Registrars.

GROSVENOR SANATORIUM, Kennington, Ashford.—Assistant Resident Medical Officer. Salary, £200 per annum

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.

HAMSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.—Three Anaesthetists. Honorarium, £25 per annum.

ITALIAN HOSPITAL, Queen Square, W.C.—House-Surgeon. Salary, £80 per annum.

KING EDWARD VII HOSPITAL FOR OFFICERS, Grosvenor Gardens, S.W.—Resident Medical Officer.

KIRKWALL: PARISH OF EDAY.—Medical Officer.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LONDON UNIVERSITY.—Examiners in (1) Medicine, (2) Bacteriology, (3) Mental Diseases and Psychology, (4) Pharmacology.

NORTHAMPTONSHIRE WAR HOSPITAL, Duston.—(1) Pathologist and Bacteriologist; (2) Radiographer. Salary, £1 a day.

PETERBOROUGH INFIRMARY.—House-Surgeon. Salary, £150 per annum.

QUEEN CHARLOTTE'S LYING-IN HOSPITAL, Marylebone Road, N.W.—Assistant Resident Medical Officer (female). Salary, £60 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeons. Salary, £100 per annum.

SALFORD POOR LAW UNION INFIRMARY.—Male Resident Assistant Medical Officer. Salary, £300 per annum; and if reappointed, £350.

SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

SOUTHPORT INFIRMARY.—Junior House-Surgeon. Salary, £3 3 a week.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—House-Surgeon. Salary, £150 per annum.

SUNDERLAND ROYAL INFIRMARY.—Lady House-Surgeon. Salary, £150 per annum.

WOLVERHAMPTON AND MIDLAND COUNTIES EYE INFIRMARY.—House-Surgeon. Salary, £150 per annum.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

ALLAN, E., F.R.C.S. Edin., L.F.P.S. Glasg., Certifying Factory Surgeon for the Barrow-in-Furness District, co. Lancaster.

BAKER, Madeleine S., M.D., B.Ch., Assistant School Medical Officer, Acting School Medical Officer to the Bristol Education Committee for the period of the war.

BRADLEY, F., M.B., B.Ch., N.U.I., Certifying Factory Surgeon for the Fintona District, co. Tyrone.

LOVE, R. J., L.R.C.P. and S. Edin., Certifying Factory Surgeon for the Staplehurst District, co. Kent.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

DEATH.

TURNER.—On February 15th, 1916, at 6, Eton Terrace, Edinburgh, after a short illness, Sir William Turner, K.C.B., F.R.S., Principal and Vice-Chancellor of the University of Edinburgh, in his eighty-fifth year. (No flowers, by special request.)

DIARY FOR THE WEEK.

MONDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF ODONTOLOGY. 5.30 p.m.—Debate on War Injuries of the Jaws and Face, to be opened by Mr. J. Lewin Payne. Exhibition of Dental Splints, open from Tuesday, February 22nd, to Monday, February 28th, from 11 a.m. to 6.30 p.m. each day.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF BALNEOLOGY AND CLIMATOLOGY. 5.30 p.m.—Dr. Clippingdale: The Thame Valley. Members will dine together at Pagani's Restaurant, Great Portland Street, W., at 7.15 p.m., and may bring guests.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF LARYNGOLOGY. 4 p.m.—Specimens and Cases. **SECTION OF ANAESTHETICS.** 8.30 p.m.—Captain G. Marshall, R.A.M.C.: The Choice of Anaesthetics at a Casualty Clearing Station. Demonstrations.

WEST LONDON MEDICO-CHIRURGICAL SOCIETY. West London Hospital.—8 p.m., Cases. 8.30 p.m., Mr. J. G. Pardoe: Prostatitis, Acute and Chronic.

ROYAL COLLEGE OF SURGEONS OF ENGLAND. Monday, Wednesday, and Friday, 5 p.m.—Arris and Gale Lectures on The Influence of the Arboreal Habit in the Evolution of Man, by Dr. F. Wood Jones.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF TROPICAL MEDICINE. Royal Albert Dock, E. **NORTH-EAST LONDON POST-GRADUATE COLLEGE.** Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE. West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

IRISH MEDICAL WAR COMMITTEE.

A MEETING of the Irish Medical War Committee was held at the Royal College of Physicians of Ireland on February 22nd, when Dr. McDowell Cosgrave, P.R.C.P.L., was in the chair, and the following members were present: F. Conway Dwyer, P.R.C.S.I.; Professor Dixon, Dr. R. J. Rowlette, Colonel Hearn, R.A.M.C., Alderman J. McWalter, Dr. T. Hennessy, and Dr. M. R. J. Hayes, honorary secretary.

The Committee had under consideration the action of some Irish boards of guardians which had cancelled the appointments made by them at previous board meetings of the locumtenents nominated by their medical officers when joining the Royal Army Medical Corps. Poor Law medical officers, when joining the R.A.M.C., nominate locumtenents who, in addition to the discharge of their official duties, undertake to look after their private practice, on terms advantageous to them, while absent. When such arrangements have been made between boards of guardians and their medical officers who have joined the R.A.M.C., and have further received the approval of the Local Government Board, which has to be satisfied before giving its sanction that provision is made for the efficient treatment of the sick poor, there is no excuse for interfering subsequently with these arrangements. The Committee, having very carefully considered the matter, directed their secretary to communicate with the boards of guardians in question and the Local Government Board, and to point out to them that so long as satisfactory arrangements were made for the treatment of the sick poor, the locumtenent nominated by the doctor who was about to join the R.A.M.C. should be appointed, as this would allow provision to be made on satisfactory terms for the conduct of the private practice of the Poor Law medical officer who had joined. The secretary was also directed to point out to the boards of guardians that if they should cancel appointments of locumtenents mutually agreed upon between themselves and their medical officers and sanctioned by the Local Government Board, it would have a very injurious effect on medical recruiting for the R.A.M.C. in Ireland.

DOCTORS ON ACTIVE SERVICE.

SCHEME FOR ATTENDANCE TO THEIR PRACTICES.

THE Partick and District Medical Society has brought into operation a scheme for attending to the practices of doctors on active service; it has been accepted by thirty-eight doctors in the district.

A financial secretary has been appointed to carry out clerical work and to arrange the money payments, and each doctor going on active service is instructed to appoint a representative to transact necessary business during his absence. Failing special arrangements by the doctor, panel patients will be distributed by the society according to locality. An emergency committee, which acts in an advisory capacity, will notify the insured persons, and will consider any objections. It would be competent for insured persons who have failed to choose a doctor, or have recently become insured, to choose a doctor on service, and for the acting doctor to sign the acceptance. Failing special arrangements, private patients may make their own arrangements with any member of the society for attendance, which will be given on behalf of the doctor on service, and practitioners remaining at home pledge themselves not to

accept patients of absent doctors as their own during the war, or within one year of the doctor's return, without his consent.

Payments in respect of panel patients will be divided on the basis of 60 per cent. to the doctors on service, subject to deduction of clerical expenses, and 40 per cent. to the acting doctor. Fees for private patients are to be equally divided, with the exception that the acting doctor shall retain the whole fee in the case of midwifery cases and miscarriages, administration of general anaesthetics, removal of tonsils, and like operations, lunacy and life insurance certificates, legal reports and court attendance, and notification of infectious diseases. Accounts will be rendered by the acting doctor, who will make a half-yearly statement and settlement to the representative of each absent doctor.

Should a doctor die on service, or be incapacitated, or remain permanently in the army, the society undertakes to assist in the advantageous disposal of the practice. Each acting doctor will hand to the representative the list of panel and private patients he has attended, and in the event of patients of a deceased or disabled doctor desiring to retain the services of the acting doctor, the latter shall pay to the representative half the fees paid for work during the ensuing year, with the exception of those enumerated above.

Meetings of Branches and Divisions.

CAMBRIDGE BRANCH:

ISLE OF ELY DIVISION.

A MEETING of the Division was held at March on February 10th, when the Vice-Chairman, Dr. C. H. GUNSON, presided, and the SECRETARY presented the annual balance sheet for the past year, which showed a deficit of 8s. 10½d. The revised ethical rules, as approved by the Representative Meeting, 1915, were adopted by the Division.

Reduced Lighting Order.—The Secretary was instructed to write to the Chief Constable asking if some form of modified motor head light would be permitted to practitioners for use on Fen journeys.

Examination of School Children.—It was resolved to accept the offer of the Education Committee of 2s. 6d. a case for examinations of school children during the absence on military duty of the school medical officer.

METROPOLITAN COUNTIES BRANCH:

SOUTH-WEST ESSEX DIVISION.

Attendance on Dependants of Soldiers.—A meeting of the Division to which all members of the profession in south-west Essex were invited was held on February 17th at Leyton, to discuss the question whether members of the profession should continue to give free medical attendance to the dependants of soldiers. Dr. CHARLES R. DYKES was in the chair. DES. BONNEFIN, VERE HODGE, POTTINGER ELDERED, BLAKE, GREENWOOD, HICKMAN, DREW HARRIS, and TODD-WHITE took part in the discussion, and the following resolutions were carried:

That this meeting of medical men resident in south-west Essex is of opinion that the scheme (for attendance on dependants of soldiers) in its present form should be modified so that free medical attendance should be confined to the dependants of soldiers and sailors who are known to be in necessitous circumstances, after a preliminary inquiry by the Committee, and that the medical man should be the judge in this matter.

That the Honorary Secretary be instructed to write to the various local committees of the Prince of Wales's Fund and point out to them that, when the profession undertook to give free attendance to the families of soldiers and sailors,

the war had just commenced, it was not thought that it would last so long, or that such an enormous army would be raised, placing so many people under the heading of "dependants of soldiers." Moreover, since the profession made this offer, the allowances to soldiers have been greatly increased, and there is therefore no necessity for such wholesale free attendance as in the past, and the Committee should only issue books to dependants who are really in straitened circumstances and unable to pay for medical attendance.

Enrolment.—Dr. VERE HODGE proposed, and Dr. POTTINGER ELDRED seconded, the following resolution, which was carried:

That in the opinion of this meeting of medical men of south-west Essex, all the medical men in any given area should, if they enrol at all, enrol all at the same time under the "British Medical Association" scheme.

INSURANCE.

INSURANCE NOTES.

PAYMENTS TO PRACTITIONERS.

Scottish Committee of the British Medical Association.

On February 9th the Scottish Committee of the British Medical Association addressed a letter to the Insurance Commission (Scotland) stating that considerable dissatisfaction existed among panel practitioners at the prospect of payments for 1915 being delayed, as had been those for 1914. It was considered that whatever excuse due to the war there might have been for delays in regard to 1914 could hardly apply to 1915, seeing that there had been ample time to put into operation the machinery for ascertaining the names of insured persons who enlisted. Any uncertainty as to the exact number was due primarily to the inertia of the approved societies, which would not voluntarily send the necessary information to the Commissioners, and secondarily to the fact that no particular pressure was being put upon them by the Commissioners. The letter concluded by asking whether during 1915 there would be the same deductions and the same delay, and, if such deductions and delays were expected, what steps were being taken to obviate them. The following reply has been received from the Scottish Commissioners:

National Health Insurance Commission (Scotland),
83, Princes Street, Edinburgh,
24th February, 1916.

Sir,

I am directed by the Scottish Insurance Commissioners to refer to your letter of the 9th instant regarding the question of a settlement with practitioners, and am to inform you that the Commissioners are now in a position to proceed with a final settlement for the year 1914, and that this will be advised to Committees so soon as the necessary calculations can be carried through. As you are aware, the position as regards enlistments has been a very difficult one, but the blame is not entirely due to approved societies as your letter indicates. The Commissioners have from time to time taken action to impress upon societies the necessity for early intimation, and they are satisfied that in many cases where such intimation has not been given the society has been unable to ascertain the facts.

As regards the year 1915 the Commissioners will, within a short period, intimate a provisional credit to Insurance Committees which will enable the Committee in most areas to make further payments to practitioners. The final settlement for 1915 cannot be made until the Medical Benefit Fund has been ascertained after taking into account (1) the contribution cards surrendered by or on behalf of insured persons, and (2) the adjustments requiring to be made in respect of enlistments. The Commissioners confidently anticipate, however, that the final settlement will be carried through during the current year.

The Commissioners appreciate the disadvantage of any avoidable delay in intimating credits to committees so that they may settle with practitioners. On the other hand, to give higher provisional credits than may ultimately be found to be due would create even greater difficulty if they involved any question of refund by practitioners. Accordingly, the Commissioners will do all in their power to accelerate payments, provided that these can be made on a basis that secures the practitioner against any question of being asked to refund.

I am, Sir, your obedient servant,

JOHN JEFFREY, Secretary.

A TEMPORARY LIEUTENANT'S WIFE writes: With reference to "G. P.'s" letter in the SUPPLEMENT to the JOURNAL of February 26th, p. 36, I, too, was staggered to read in the issue of January 29th that "no more pressure was to be brought to bear upon the Insurance Commissioners to obtain payment of moneys owing to practitioners for the years 1914 and 1915 until after the war." My husband has joined the R.A.M.C. I pay the lieutenant seven guineas a week (indoors), chauffeur 35s. (outdoors)—just two items, by the way, incurred in attending

to insured persons. The Insurance Committee for Glamorgan owe us well over £200. To pay my way now I am entrenching on our savings. In addition, the wives and families of over 100 men who have joined the colours are being attended free. In my humble opinion no grosser scandal ever existed.

ENSIFORM writes: I was much astonished at the letters of Dr. J. Culmer and "G. P." in your issue of February 26th. In December last the Medical Secretary (Dr. Cox) was informed by the Commissioners that the funds referred to had been placed in the hands of the County Committees, and that distribution would take place "forthwith."

In the two counties in which I am interested the funds are known to have been at the disposal of the committees since early in December, but still no distribution! Apparently this awaits the pleasure of the secretary, who can always find time to write on such important matters as the correct procedure in respect of travellers' vouchers, "surcharges" to be deducted, and triplicate notices as to the movements of tuberculous cases, etc.

As Panel Committees seem to be seldom summoned, and to have merely nominal functions, the only hope of redress would seem to lie with the British Medical Association.

I would suggest, therefore, that a vigorous protest should be made by the Medical Secretary (Dr. Cox) against the unfair and unbusinesslike withholding of moneys long overdue. If we sit quiet now, we shall have worse to face before long; the time for complaisance has run out.

Dr. W. CONWAY GENT (North Curry) writes: Dr. Culmer's suggestion in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL, February 26th (p. 36) might be made more attractive to the Commissioners if we agreed to purchase an amount in Exchequer Bonds equal to the sum allotted to us in settlement of arrears.

For example, supposing the Commissioners owe me £50 arrears, and I invest £50 in Exchequer Bonds, a similar amount should be allotted me on account of arrears. So that my £50 would secure £100 of Exchequer Bonds, and I should give a receipt for £50 received on account of arrears.

Exchequer Bonds are "Bearer" Bonds, and bankers will always advance money on them. I believe a scheme modelled on these lines would induce many medical men to invest, and would bring in quite a substantial amount to the Chancellor of the Exchequer.

"G. P." (SUPPLEMENT, BRITISH MEDICAL JOURNAL, February 26th, 1916, p. 36), and others who have written to the Medical Department of the British Medical Association have fallen into an error as to the meaning of a paragraph in the report of the Proceedings of Council (SUPPLEMENT, BRITISH MEDICAL JOURNAL, January 29th, 1916, p. 18).

In that paragraph the Council stated its intention not to bring any further pressure to bear on the Government at present as regards the special claim of panel practitioners for consideration owing to the taking away from their lists of many of the healthy lives while leaving the men who are on the whole not such good lives as those who have joined the army, and the women workers. The Council based its decision on the difficulty of securing accurate data on which a case for special treatment could be made out. The paragraph had nothing to do with the steps taken to induce the Commissioners to put the payment of accounts due to panel practitioners on a proper business-like basis. This matter has been, and will be, prosecuted vigorously.

INSURANCE COMMITTEES.

LONDON.

Sanatorium Benefit and Practitioners' Remuneration.

At the meeting of the London Insurance Committee on February 27th the Finance Subcommittee presented a report in which it was stated that the sum of 9d. a head remaining to be allotted for sanatorium benefit purposes (after the deduction of the "domiciliary 6d.") had to bear the whole cost of the treatment of insured persons in sanatoriums, hospitals, and dispensaries, the examination of applicants, the supply of medicines, etc., and that it became a question whether there should not be a reconsideration, not of the remuneration of the medical practitioner, but of the source from which that remuneration was derived. It had been agreed between the Chancellor and the medical profession that the question of the "domiciliary 6d." should be subject to reconsideration at the end of the third year; and the depleted state of the Sanatorium Benefit Fund made this very desirable. The report suggested that domiciliary treatment, although unsatisfactory in many instances from the circumstances of the patient's environment, would probably lead to the detection of a much greater percentage of early cases of tuberculosis if every panel practitioner realized his duty to his patients by giving the time necessary for making a thorough examination and more complete diagnosis.

The report was strongly opposed by Dr. B. A. RICHMOND and Dr. H. H. MILLS, the former challenging certain figures as to the Sanatorium Benefit Fund, and urging that the attack on the profession was based upon misconceptions as to what domiciliary treatment really was. The cases classified under this head by the Committee represented only a small proportion of cases attended by practitioners. In the early stages, although the work of the practitioner was then most important and arduous, the cases were not recorded. He knew of practitioners who dealt with cases of tuberculosis among insured persons throughout the whole of the illness, and yet the Committee gave them no credit for this work because the insured person did not choose to apply for sanatorium benefit. Mr. HANDEL BOOTH, M.P., pleaded that the doctors should not put themselves so habitually into the attitude of accused persons, and also that they should not drag the question of their own remuneration into everything.

Dr. Richmond's motion to refer the report back was lost, only three voting in its favour; and a motion was subsequently carried *nomine contradicente* stating that owing to lack of funds the Committee was unable properly to discharge its duties (in respect to sanatorium benefit) to the insured person, and calling upon the Insurance Commissioners to take steps to remedy the deficiency.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

Complaints against Panel Practitioners.—At the meeting of the London Panel Committee on February 22nd the CHAIRMAN stated, in reply to a question, that during the last three years the number of complaints made by, or on behalf of, insured persons in London against panel practitioners was 303, of which 168 had been sustained. The total number of medical men complained against was 251, and in the case of 39 of these more than one complaint was lodged. The number of practitioners upon whom penalties had been imposed was 105.

Arrangements with Deputies.—The consideration of a case in which a practitioner with 2,776 persons on his list had entered the army and transferred his practice temporarily to a deputy who already had a list of 2,250, led several speakers to express the opinion that it would be a dangerous precedent for the Committee to define the number which a panel practitioner might have on his list. The report of the Panel Service Subcommittee stated that after reviewing the local conditions it appeared that in this case such a responsibility could not be undertaken satisfactorily by the one deputy. By a small majority the Committee agreed to accept the Subcommittee's report, and expressed the view that it was desirable that in all cases in which a full-time locum tenens was not appointed advantage should be taken of the Committee's War Emergency Scheme by which the work of the practice is arranged with due regard to the number of panel practitioners in the locality.

Treatment and Care of Measles.—Opposition was expressed in the report of the General Purposes Subcommittee to the scheme prepared by the Central Council for District Nursing in London, which, it was alleged, made it possible for cases of measles and whooping-cough to be attended by nurses without the direct supervision of a medical practitioner. Some members of the committee, however, denied that the scheme could bear this interpretation. The meeting adjourned without coming to any decision as to a recommendation on the agenda pointing out the desirability of the medical care and treatment of these affections remaining in the hands of the general practitioner, instead of being transferred to full time medical officers.

EAST SUFFOLK.

At a meeting of the Panel Committee on February 8th, the Clerk of the Insurance Committee was requested to refrain in future from sending financial statements through the post in unsealed envelopes. The Secretary was instructed to draw the attention of the authorities in East Suffolk to the resolution of the Insurance Acts Committee of the British Medical Association to the effect that the provision of proper and sufficient medicines, as contemplated by the 1911 Act, does not include the supply of salvarsan, vaccine, sera, etc., and that, with a view to the proper treatment of insured persons, public health

authorities should be urged to use the powers they possess and which most of them utilize—namely, to supply diphtherial serum gratuitously. It was decided that it was not necessary to hold a conference of representatives of Local Medical and Panel Committees in 1916.

YORK.

At a meeting of the Local Medical and Panel Committee on February 2nd, it was decided to appoint a subcommittee to deal with the question of prescribing in the area, as affecting the Panel Committee, and to give it power to complete arrangements with the Joint Committee as to the provision to the Panel Committee of such additional data over and above those to be provided gratis as would enable it to decide upon the question of extravagant prescribing by any practitioner in the area, the cost of such investigations as might be necessary not to exceed 2s. 6d. per 1,000 prescriptions dealt with.

It was agreed that it was not advisable to hold a conference of representatives of Local Medical and Panel Committees in 1916.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following announcements are notified by the Admiralty: Staff Surgeons to be Fleet Surgeons: R. W. G. Stewart, M.B., W. P. Walker, M.B., J. G. Wallis, M.B., H. R. H. Denny, J. B. Muir, M.B., J. O'Hea, J. St. J. Murphy, A. J. Hewitt, L. S. Whitlam, M.B., G. M. Eastment, W. P. Dyer, T. H. Vickers, and R. B. Horley. Staff Surgeon F. R. Townsend to the *Vivid*, additional, for disposal. Surgeons M. P. Caldwell, M.B., to the *Pembroke*, additional, for Yarmouth Hospital; F. G. H. Black, M.D., to the *Pembroke*, additional, for disposal. Temporary Surgeons C. Banes, O. H. Gotch, M.B., and P. C. Woodlatt, F.R.C.S., to the *Victory*, additional, for Haslar Hospital; S. L. Harke, to the *Pembroke*, additional, for disposal.

ROYAL NAVAL VOLUNTEER RESERVE.

To be Surgeon Probationers: V. M. Syngé, F. S. Horrocks, R. Weaver, L. C. Goumet, F. P. N. Parsons, J. S. Westwarter, T. G. Evans, C. G. Terrell, A. E. Ward, C. E. Cobb, R. N. Gibson, T. Carlyle, A. D. Wall, W. G. Thompson, O. K. Cullen, A. W. Kirkham, R. L. Walker, W. S. Sykes, A. P. Gallaher, A. I. Cox, P. S. Walker, R. J. Farmer, and A. R. Matheson.

ARMY MEDICAL SERVICE.

Surgeon-General J. G. MacNeuse, C.B., and Colonel S. Westcott, C.B., C.M.G., are retained on the active list under the provisions of Articles 120 and 522, Royal Warrant for Pay and Promotion, and to be supernumerary.

ROYAL ARMY MEDICAL CORPS.

Major R. S. Smyth, M.D., retires on gratuity. To be temporary Majors: R. D. Hotchkiss, M.D., temporary Captain F. A. A. Holmden, D.S.O., M.B., A. W. May, M.D. Temporary Captain A. H. James relinquishes his commission. Temporary Lieutenants to be temporary Captains: J. H. Glover, M.B., G. Filde, M.B., H. W. S. Wright, E. C. Malden, W. K. A. Richards, C. Roche, J. W. Gilbert, B. H. Browning, K. Playfair, J. H. Bampton, M.B., F. R. Harris, T. A. Watson, M.D., T. L. Enright, H. H. Weekes, M.D., A. H. Wilson, A. G. P. Hardwick, W. J. B. Sellkirk, M.D., R. M. Fraser, W. D. Dunlop, M.B., T. H. F. Roberts, D. Wilson, M.B., G. W. B. James, M.D., B. E. Parmiter, M.B., J. W. McKinney, M.B., C. E. Tawee, M.B., J. D. Forrester, M.B., G. Smith, A. B. Wightman, M.B., R. A. Morrell, S. B. Radley, M.B., F.R.C.S., L. C. Dillon-Kelly, C. F. Dillon-Kelly, E. P. Leahy, M.B., E. Tindall, M.B., R. H. Liscombe, M.B., F. L. Cleland, M.B., A. Fullerton, M.B., E. E. Herga, W. A. Coats, M.B., T. E. Roberts, R. R. Armstrong, M.B., J. A. F. Hatch, M. Gross, A. W. Comber, W. Anderson, M.B., F.R.C.S.E., G. A. Shiel, D. M. Morison, M.B., M. H. Fleming, C. E. Freeman, H. Smith, M.B., W. B. Sanders, M.B., D. J. Jones, M.B., C. H. G. France, H. J. Gator, G. G. Bartholomew, M.B., W. R. Knightley, P. M. Heath, F.R.C.S., H. O. Harrison, A. E. Sellar, A. Cowe, M.B., J. E. Davies, J. C. Neil, M.B., W. MacLeod, O. B. Pratt, T. W. Wadsworth, M.D., E. H. Fennessy, M.B., S. T. Lewis, M.B., D. F. A. Neilson, H. V. Lamb, L. H. Terry, P. L. T. Bennett, J. H. Boag, M.B., W. F. MacAlevy, K. M. Nelson, A. H. Towers, M.B., H. S. Turner, P. P. Warren, P. W. White, M.B., H. G. Morris, M.B., M. Ramsay, M.B., C. R. Nicholson, M. Nicoll, M.B., H. C. Hight, M.D., A. Scott, M.B., late Surgeon, R.N.

Temporary Lieutenants relinquishing their commissions: F. P. Walsh, A. N. Craig, M.B., A. St. Johnston, G. L. Jones, A. J. B. Leckie, M.D., G. Reid, M.B., W. Wilesworth, R. L. E. Downer, M.D.

Temporary Lieutenant H. Matins, M.B., F.R.C.S.E., relinquishes his commission on account of ill health.

To be temporary Lieutenants: Temporary honorary Lieutenant B. Graves, H. E. Whittingham, M.B., J. MacNamara, D. S. Robertson, M.B., J. H. O. Fegan, H. E. Allanson, M.D., J. McConnell, M.B., R. Younger, M.B., A. J. L. Speechly, G. T. L. Murphy, M.B., W. M. Buchanan, M.B., G. G. Buchanan, M.B., W. Garton, T. H. Agnew, A. N. Cox, M.D., H. B. Williams, M.B., H. de L. Crawford, M.B., F.R.C.S.I., W. W. Jones, M.B., C. B. F. Tivy, M.B., H. V. Forster, M.B., J. Bamforth, M.D., E. E. Semmence, G. Hart, J. Nunan, M.B., D. Smith, M.B., A. W. Jones, P. B. Eskell, J. W. Tonks, M.B., F.R.C.S., J. S. Part, M.D., D. J. Clark, M.B., L. R. H. P. Marshall, M.D.

The notifications concerning W. H. Broughton and temporary Lieutenant J. R. McGilvray, M.B., which appeared in the *London Gazette* of February 4th and 8th respectively, are cancelled.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Captain E. T. Burke to be temporary Major whilst commanding 40th Field Ambulance.

Lieutenants to be Captains: R. Stowers, R. O. Eades, R. A. Peters, M.B., J. A. Binning, S. Brown, J. Melvin, M.B., J. E. Busby.

Lieutenant C. G. Todd resigns his commission on account of ill health.
Lieutenants on probation confirmed in their rank: G. T. Gimlette, W. Williams, M.B.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Wessex Field Ambulance.—Captain H. W. Spaight, from half-pay list, to be Captain.

Welsh Casualty Clearing Station.—A. W. Clarke to be Lieutenant.

Western General Hospital.—Lieutenants to be Captains: E. W. Richards, M.B., J. Lloyd, M.D.

London Casualty Clearing Station.—Lieutenant H. Drummond, M.B., to be Captain.

London (City of London) Field Ambulance.—Captain H. K. Griffith, M.B., F.R.C.S., from Attached to Units other than Medical Units, to be Captain. C. P. Sells to be Lieutenant.

London Field Ambulance.—Captain D. D. Brown, M.D., from Attached to Units other than Medical Units, to be Captain.

London General Hospital.—Lieutenant-Colonel A. F. Garrod, M.D., is seconded. A. Kingsford to be Captain, whose services will be available on mobilization (substituted for notice published in the *London Gazette*, January 22nd).

London Sanitary Company.—To be Lieutenants: W. J. F. Mayne, M.B., late temporary Lieutenant R.A.M.C., A. F. Girvan. Lieutenant S. L. Bartholomew relinquishes his commission on account of ill health.

South-Eastern Mounted Brigade Field Ambulance.—Captain W. Tresawna, M.B., is seconded for duty with the Duke of Cambridge's Own Middlesex Regiment).

South Midland Mounted Brigade Field Ambulance.—C. P. C. Sargent to be Lieutenant.

East Anglian Field Ambulance.—Captain (temporary Major) J. R. Pooler, M.B., to be temporary Lieutenant-Colonel whilst commanding a field ambulance. To be Captains: Captain T. W. Morcom-Harries, from Attached to Units other than Medical Units, Lieutenants J. E. Brooks, N. M. Smith, M.B., W. J. Dearden, A. Greene, M.D., F.R.C.S. Lieutenant W. K. Legassick is seconded for duty with the Queen's Own (Royal West Kent Regiment).

Yorkshire Mounted Brigade Field Ambulance.—Lieutenant J. C. Denvir, M.B., to be Captain.

West Lancashire Field Ambulance.—Captain F. W. K. Tough, F.R.C.S., from Attached to Units other than Medical Units, to be Captain.

Lowland Field Ambulance.—Captain R. B. Barnetson, M.B., relinquishes his commission. Lieutenant R. Watson to be Captain.

Scottish General Hospital.—Lieutenants to be Captains: F. W. C. Brown, M.B., J. W. Simpson, M.B.

Highland Field Ambulance.—Captain C. A. Whyte relinquishes his commission on account of ill health. Lieutenant (temporary Captain) J. A. Stephen, M.B., to be Captain. Lieutenants to be Captains: H. G. Donald, M.B., J. W. McKeggie, M.B.

Attached to Units other than Medical Units.—To be Captains: Lieutenants R. V. C. Ash, M.B., H. L. Gauntlett, F. R. Fletcher, M.B., H. W. Godfrey; Captain B. Hughes, M.B., F.R.C.S., from 1st West Riding Field Ambulance; Lieutenant A. B. Winder, M.B., to be Lieutenant: M. Thompson.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BOLTON INFIRMARY AND DISPENSARY.—Second House-Surgeon. Salary, £200 per annum.

BOURNEMOUTH: ROYAL VICTORIA AND WEST HANTS HOSPITAL.—House-Surgeon. Salary, £150 per annum.

BRADFORD CITY.—Female Medical Officer (temporary). Salary, £8 8s. a week.

BRISTOL GENERAL HOSPITAL.—Casualty House-Surgeon. Salary, £175 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURY INFIRMARY.—Junior House-Surgeon. Salary, £150 per annum.

DEVON COUNTY COUNCIL.—Temporary Medical Superintendent for Tuberculosis Sanatorium. Salary, £500.

DOUGLAS: ISLE OF MAN ASYLUMS BOARD.—Medical Superintendent of the Asylum and Medical Officer of Home for the Poor.

DUDLEY: GUEST HOSPITAL.—Assistant House-Surgeon. Salary, £120 per annum.

EDINBURGH PARISH COUNCIL.—Assistant Medical Officer for Craiglockhart Poorhouse and Hospital. Salary, £150 per annum.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.

KIRKWALL: PARISH OF EDAY.—Medical Officer.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LONDON FEVER HOSPITAL, Liverpool Road, N.—Assistant Resident Medical Officer. Salary, £200 per annum.

LONDON UNIVERSITY.—Examiners in (1) Medicine, (2) Bacteriology, (3) Mental Diseases and Psychology, (4) Pharmacology.

MANCHESTER COUNTY ASYLUM, Prestwich.—Locumtenant.

NORTHAMPTON GENERAL HOSPITAL.—Two House-Surgeons. Salary, £150 per annum each.

NORTHAMPTONSHIRE WAR HOSPITAL, Duston.—(1) Pathologist and Bacteriologist; (2) Radiographer. Salary, £1 a day.

NORTH-EAST KENT JOINT COMMITTEE, Sittingbourne.—Temporary Assistant Medical Officer of Health.

PETERBOROUGH INFIRMARY.—House-Surgeon. Salary, £150 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeons. Salary, £100 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

SOUTHPORT INFIRMARY.—Junior House-Surgeon. Salary, £3 3s. a week.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—House-Surgeon. Salary, £150 per annum.

SUNDERLAND ROYAL INFIRMARY.—Lady House-Surgeon. Salary, £150 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Charlestown (co. Mayo), Harrow (Middlesex).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

AINSCOW, H., M.B., B.S.Lond., District Medical Officer of the Belper Union.

CARLILL, Hildred, M.A., M.D.Cantab., M.R.C.P.Lond., temporary Surgeon R.N., Neurologist to the Royal Naval Hospital, Haslar.

COCHRANE, S. T., M.D.Durh., D.P.H., District Medical Officer of the Burton-upon-Trent Union.

GORDON, F. J., B.A.(Camb.), M.R.C.S., L.R.C.P., District Medical Officer of the Horncastle Union.

GRAVES, A. J., M.R.C.S., L.R.C.P., District Medical Officer of the Whitehaven Union.

HARRY, W. B., L.S.A., District Medical Officer of the Neath Union.

LEONARD, T. J., L.R.C.P. and S.L., Certifying Factory Surgeon for the Glaslough District, co. Monaghan.

NALLIAH, N. B., L.R.C.P., M.R.C.S., Assistant House-Surgeon to the West Bromwich and District Hospital.

SIBBALD, B. I. G., M.B., C.M.Edin., District Medical Officer of the Beaminster Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

DEATH.

HOOD.—At 33 Casualty Clearing Station, B.E.F., on the 19th February, of wounds received on the 15th, George Christie, aged 21, Lance-Corporal 16th Middlesex (Public Schools Battalion), only son of T. A. F. Hood, M.B., Ivybank, Blairgowrie.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 9 p.m.—Third Letchman Lecture by Major Fred. W. Mott, M.D., F.R.S.: The Effects of High Explosives on the Central Nervous System.

ROYAL SOCIETY OF MEDICINE: SECTION OF ODONTOLOGY, 5.30 p.m.—Adjourned Debate on War Injuries of the Jaws and Face.

TUESDAY.

RÖNTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Adjourned discussion on the Injurious Effects Produced by X Rays.

WEDNESDAY.

HUNTERIAN SOCIETY, 1, Wimpole Street, W., 9 p.m.—Dr. Langdon Brown: A New Method of Treatment in Diabetes.

ROYAL SOCIETY OF MEDICINE: 5 p.m.—Dr. Leonard S. Dudgeon: Personal Experiences on the Gallipoli Peninsula and Eastern Mediterranean, with lantern illustrations.

FRIDAY.

ROYAL SOCIETY OF MEDICINE: 5 p.m.—Lecture by Dr. M. Weinberg: Bacteriological and Experimental Researches on Gas Gangrene.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, 5 p.m.—Monday and Wednesday: Hunterian Lectures by Professor J. E. R. McDonagh—Links in the Chain of Research on Syphilis.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.

CENTRAL MEDICAL WAR COMMITTEE.

CIRCULAR TO CANVASSERS.

WHY THE ENROLMENT SCHEME MUST BE MADE A SUCCESS, AND ANSWERS TO COMMON OBJECTIONS.

1. No one can say how long the war may last, and therefore how many doctors may be required in the future, but it is the duty of the profession to be prepared for any calls that may be made upon it.

2. The only fair way to secure this—fair to the profession as well as to the public—is to get every man of military age to signify his willingness to accept military service if and when it is thought that his services should be offered. In return for this undertaking the Central Medical War Committee, in consultation with the local Medical War Committees, promises that its calls shall be made with due regard to professional and personal difficulties, which the enrolled man will have full opportunity of placing before the Committee. Inconvenience in most cases, and hardship in many cases, are inevitable, but these can be alleviated if proper arrangements are made before a man is asked to undertake military service.

3. Such arrangements can only be made equitably if the field of selection is as wide as possible. There are, roughly speaking, about 6,000 medical men under 45 in England and Wales. If 2,000 of these should during the course of the war be required it would obviously be more fair to all concerned if the selection were made from the whole 6,000 rather than from three or four thousand. It is extremely unlikely that every man who enrolls will be required. Moreover some would not be accepted by the War Office on physical grounds; others practise in areas from which they could not possibly be spared; others hold public appointments from which it would be difficult to release them without danger to the health of the community. Others have financial liabilities which would entail their ruin if they were called up. But every man who enrolls helps to make it easier for others to do the same and more difficult for them to decline, and thus renders it possible to select the doctors who are wanted and can go with the minimum of hardship.

4. The credit of the whole profession is at stake in making this Enrolment Scheme a success. Up to now the profession has been left to organize itself to meet the calls of the country, and everyone acknowledges that it has done it splendidly. The Central Medical War Committee believes that by energetically carrying out the present system of enrolment the profession will be able, so far as the supply of medical men is concerned, to see the war through without compulsion or official interference.

5. The following are the stock objections against enrolling which you may have to meet, with brief answers:

OBJECTION (A): *I am physically unfit.*

ANSWER: That is no reason why you should not have your certificate of enrolment, which will be a proof that

you were willing to go if the War Office needed and would take you. If you are called upon to join, it will rest with the military authorities to accept or decline you.

Further, the Certificate of Enrolment will enable you to be used in local military service if such service be required. Men holding the Certificate may be employed in part-time military work irrespective of their age, whereas other men will not be employed on such work unless they are over 45.

OBJECTION (B): *I have financial liabilities which make it almost impossible for me to go.*

ANSWER: So have probably two-thirds of the men who will enrol. So have thousands of the men under the Derby Scheme—yet they attested. You are assured of all your circumstances being considered at the time when your name comes up as a possible applicant for the R.A.M.C., and every endeavour will be made to leave till a later time or refrain altogether from calling up those who would obviously suffer greatly by going. But if you decline to take your chance you may be sure that some other man, with probably greater financial difficulties but a keener sense of duty, will have to go in your stead.

The Local Medical War Committee of your area will endeavour to make arrangements to meet your difficulties as far as they can be met by a professional body. It is suggested that one of the best ways would be for practitioners with overlapping practices to enter into a temporary partnership for the duration of the war and a period after, thus pooling finances and sharing loss, if any. The Local Medical War Committee would be glad to discuss this matter, or any alternative plan for protecting your interests if called up, with you and any of your neighbours who may think of entering into such an arrangement.

OBJECTION (C): *I have a partner, or an assistant who is on military service; or I am doing work for a neighbour on active service.*

ANSWER: Enrol all the same. Your position is bound to appeal to the Central and Local Medical War Committees when they decide who are the men who should be asked to go.

OBJECTION (D): *I cannot be spared. If I went away my work could not be done.*

ANSWER: That is a question that should be settled by other people. You are not an unbiassed judge. But it is a necessary part of the Scheme that when a man is asked to go arrangements must be made for carrying on his work. If your neighbours cannot do it, and if a substitute cannot be found, you will not be called up. But you should certainly enrol along with the rest.

OBJECTION (K): *I hold a public appointment from which the authority employing me considers I cannot be spared.*

ANSWER: The Central Medical War Committee is in close touch with the Government Departments concerned in medical practice, and you will not be called up without the consent of the Government Department and of any local authority which are concerned in the work on which you are engaged.

OBJECTION (F): *I am on a Hospital Staff.*

ANSWER: The Central Medical War Committee is as anxious as you can be to prevent Hospital staffs from being unduly depleted. The Committee has already circularized the staffs of all the voluntary hospitals in England and Wales asking them to consider what are their minimum requirements in the way of staff. On this question the Central Committee expects to receive valuable assistance from the Local Medical War Committees in the provinces. For the consideration of the whole question as it affects London it is proposed to set up a Special Advisory Committee, and the opinions of this Committee will no doubt enable the calls on the members of staffs of hospitals in London to be made with as little dislocation of the work of those hospitals as is possible in the circumstances. The individual member of a staff should enrol on the distinct understanding that the circumstances of his hospital will be duly considered before he is asked to undertake military service.

OBJECTION (G): *I am already doing some form of military work, e.g., attending at V.A.D., Red Cross, or some local military hospital.*

ANSWER: The military medical work of primary importance is securing the fitness of the fighting men. This can only be done by medical men with the armies, and by such work alone can the war be won. Home Hospital work can be done by the older men. Further, if the time comes when you are asked to take military service, and you have any doubt as to whether you will be doing better military work by staying at home or by going into the army, put the question to the Director-General of the Army Medical Service.

OBJECTION (H): *I have already served for 12 months.*

ANSWER: That is no reason why you should not enrol. That circumstance will be taken into account when your case is considered, and would be a good reason for expecting other men to go before you are asked to serve again. You have previously set a good example by undertaking military service. Set another one to your neighbour by enrolling.

OBJECTION (I): *I do not think I should be asked to join the R.A.M.C., because I am not convinced that the most economical use is being made of men who are already in the Service.*

ANSWER: Probably most of the men who have joined the Service would agree with you, but that did not prevent them from joining, and it does not prevent most of them continuing in the Service, even after they might retire. War cannot be conducted without waste. Men must be ready in reserve for any contingency. They may seem idle and wasted, but they are doing their duty by being there for service when required. If every man refused to join the army until it was being run in a way which satisfied his ideas as to the economical use of men and material there would be no army at all.

OBJECTION (J): *I have special experience or qualifications, and I don't care to join unless I shall be sure they will be used.*

ANSWER: It is impossible to give a guarantee that every man will be used only in the special line to which he has been accustomed. A large number of men with special qualifications are used in their special work, but every doctor must be prepared to do doctor's work of any kind, and men of the highest qualifications and long experience have not been ashamed or unwilling to turn their hand to routine work when special work was not available.

OBJECTION (K): *I am not content to join as a lieutenant. My position or experience should be recognized by higher rank.*

ANSWER: You are only asked to join as a temporary officer, and the distinctions of rank matter much less in your case than they would if you were joining the R.A.M.C. as a life career. Some thousands of men have now joined as lieutenants, and it would be impossible to ask the authorities to give preferential treatment to men who are now joining. You will find lots of men as well qualified and with as much experience as yourself serving as lieutenants and proud to do so.

OBJECTION (L): *The pay is not sufficient.*

ANSWER: It cannot be denied that most men in practice who take military service will be making a monetary sacrifice, and you must be prepared to do the same in common with very large numbers of your fellow-countrymen. But the pay is good compared with that offered to people who join the army as combatant officers. The pay amounts to £500 per annum—namely, 24s. a day and a gratuity of £60 at the end of the year. There is in addition either rations or a daily allowance in lieu of rations, and £30 for uniform. Your Local Medical War Committee will do all that a professional body can to protect your interests while you are away if you are selected to go. It must not be forgotten that the contract is for one year only, and you can renew it or not at the end of that time as you think fit. This does not apply to any other form of service in the army.

OBJECTION (M): *I am afraid that if I enrol I may be called up arbitrarily by the Committee without due consideration of my personal and professional circumstances.*

ANSWER: The Central Medical War Committee is a purely voluntary one composed of representatives of practically every section of medical men. It was set up in the first instance by the Representative Body of the British Medical Association, but original members were put upon it who were not members of the Association, and power was given to it to co-opt others. The result is that it now consists of representatives of practically every medical interest. Representatives of the three Government Departments concerned with the provision of medical attendance attend its meetings regularly. It is in close and constant co-operation with local Medical War Committees all over the country. It is fully recognized by the Director-General as his medium for communicating to the profession the medical needs of the army. The Committee therefore is in a better position than any other body could be to consider the requirements of the War Office and the Government Departments and those of the civilian population. In any case you must remember that no other body of the kind has attempted to do this duty, and the Committee feels it has established a right to ask the members of the profession to support it in the great task it has undertaken.

March 8th, 1916 [W. 28].

ELIGIBILITY OF ENROLLED MEDICAL PRACTITIONERS FOR ARMY DUTY IRRESPECTIVE OF AGE.

THE Army Council has issued the following instruction, dated March 2nd, 1916:

475. Eligibility of Medical Practitioners for Army Duty Irrespective of Age when Enrolled with Certain Committees.

With reference to W.O. letter X/Misc./246 (A.M.D. 1) of 27th August, 1915, medical practitioners who have enrolled with the Central Medical War Committee, or the Scottish Medical Service Emergency Committee, for service with the Army, and are in possession of a certificate of enrolment with either Committee, may be considered eligible for Army duty irrespective of their age.

24/Gen. No./4749 (A.M.D. 1).

Copies of this instruction have been issued to G.O.S. C.-in-C., and G.O.C. London District.

N. Duggan, M.B., F.R.C.S., A. H. Jacob, H. B. Smith, M.B., T. P. Herriot, M.B., F. E. Sprawson, C. G. G. Keane, A. Leach, M.B., F. P.

Livers, M.B., A. L. Taylor, M.B., W. Campbell, M.B., L. U. Geraty, G. Leggat, M.B., C. R. Dudson, F. H. Woods, L. McI. Weeks, M.B., J. Macintyre, M.B., H. E. A. Boldero, C. S. L. Roberts, H. A. Gillespie, M.B., H. C. Duffy, M.B., L. R. Broster, M.B., J. P. Fitzpatrick, E. S. Marshall, J. I. P. Wilson, M.D., F.R.C.S.E., H. G. Frean, M.B., F.R.C.S., F. A. Mills, M.B., W. T. Collier, J. T. Smeall, M.B., J. J. Dunne, H. A. Russell, I. S. James, E. B. Gunson, M.D., B. D. Fitzgerald, M.B., A. S. Fry, M.B., H. D. Duke, J. H. Wrightson, M.B., H. J. Milligan, M.D., W. R. G. Hamilton, F.R.C.S.I., D. C. Alexander, M.B., H. Ackroyd, M.D., S. G. Tippet, M.B., A. R. Chavasse, M.B., G. W. Davis, M.D., G. Muir, M.B., D. A. D. Kennedy, M.B., W. H. Butler, J. F. Walker, M.B., M. M. Townsend, G. D. Shann, J. R. McGrivray, M.B., K. D. C. Macrae, M.B., H. S. Berry.

To be temporary Captains: R. H. J. Swan, M.B., F.R.C.S., J. S. Ross, M.B., F.R.C.S.E.

Granted temporary honorary rank whilst serving with the Scottish Red Cross Society: As Captains: C. McNeil, M.D., F.R.C.P.E., D. Cotterill, M.D., F.R.C.S.E. As Lieutenants: H. T. Thomson, M.D., D. H. D. Cran, M.B.

To be temporary Lieutenants: H. M. Wilson, M.B., R. H. Bridge, M.B., F.R.C.S., F. M. Davies, J. L. Cochrane, M.D., R. C. Harkness, M.B., F.R.C.S., J. A. Mason, M.D., J. E. Mullan, G. Jackson, M.B., J. A. Fretton, E. W. N. Hobhouse, M.B., J. G. Slade, M.D., G. P. Schoelen, J. W. E. Cole, M.B., D. J. O'Brien, E. M. Balhazar, W. W. Halsted, G. E. Anderson, H. R. Davies, M.D., H. N. Rankin, M.B., G. R. E. Colquhoun, T. F. Moran, W. S. McGowan, M.D., J. P. Douglas, M.B., D. H. Foley, L. F. West, F. J. MacManus, T. W. Rutledge, M.B., P. G. Leeman, M.B., F. H. McCaughy, M.B., C. H. Seville, M.B., C. H. G. Philp, M.B., E. N. Hartley, G. F. C. Healy, M.D., W. G. Jones, J. K. Garner, H. V. A. Gatchell, H. G. Carlisle, M.D., H. T. Finlayson, M.B., J. Williamson, S. Potter, G. Macdonald, M.B., E. W. G. Young, M.B., T. T. O'Callaghan, J. S. Crawford, M.D., J. W. Littlejohn, M.B., C. E. Sharp, M.D., E. Black, M.B., H. Bourchier-Hayes, J. M. O'Reilly, M.B., H. MoW. Daniel, M.B., A. P. Hart, M.B., D. M. Hunt, J. Penman, M.B., A. N. W. Colahan, M.B., H. Stobie, W. O. Roberts, G. S. Robinson, M.B., H. Nichol, M.B., J. E. Cable, M.B., J. E. S. Sheppard-Jones, G. Hesthote, E. H. Wood, M.B., H. P. Caithness, M.B., A. S. Burgess, M.B., W. A. Muir, M.D., D. S. Steele Perkins, G. C. Robinson, J. Colgan, M.B., A. G. East, M.B., A. H. B. Kirkman, F.R.C.S.E., W. D. Macdonald, M.B., M. W. Loy, J. Dunlop, M.B., C. S. Read, M.D., C. R. Wright, W. H. Hart, M.B.

The name of temporary Lieutenant Arthur L. H. Rackham is as now described and not as in the *London Gazette* of December 19th, 1914.

Temporary honorary Lieutenants to be temporary Lieutenants: G. C. Berg, C. H. C. Byrne, P. Hudson, G. Cranston, H. Gardiner-Hill, G. O. Hampson, G. M. Ververs, E. B. Barnes, G. S. Graham, M.B.

To be temporary honorary Lieutenants: T. B. Johnston, M.B., V. C. James, R. H. Fleming, M.B., H. A. Whyte-Venables, P. A. Dargan, L. W. Jones.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM MATERNITY HOSPITAL.—Resident House-Surgeon (female). Salary, £100 per annum.

BRISTOL GENERAL HOSPITAL.—Casualty House-Surgeon. Salary, £175 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—House-Surgeon. Salary, £160 per annum.

BURY INFIRMARY.—Junior House-Surgeon. Salary, £150 per annum.

CAMBRIDGESHIRE ASYLUM, Fulbourn.—Junior Assistant Medical Officer (male). Salary, £200 per annum, rising to £250.

CARDIFF: KING EDWARD VII HOSPITAL.—Two House-Surgeons. Salary, £140 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—Physician to Out-patients. Fee, £1 ls. per attendance.

DOUGLAS: ISLE OF MAN ASYLUMS BOARD.—Medical Superintendent of the Asylum and Medical Officer of Home for the Poor.

DUDLEY: GUEST HOSPITAL.—(1) Senior Resident Medical Officer; salary, £150 per annum. (2) Assistant House-Surgeon; salary, £120 per annum.

EALING: KING EDWARD MEMORIAL HOSPITAL.—Resident Medical Officer. Salary, £100 per annum.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.

KIRKWALL: PARISH OF EDAY.—Medical Officer.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LONDON UNIVERSITY.—Examiners in (1) Medicine, (2) Bacteriology, (3) Mental Diseases and Psychology, (4) Pharmacology.

NORFOLK WAR HOSPITAL, Thorpe.—Vacancies on Non-commissioned Resident Medical Staff. Pay, £1 per diem.

NOTTINGHAM CITY ASYLUM.—Senior Assistant Medical Officer. Salary, £300 per annum.

QUREN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeons. Salary, £100 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Senior Resident House-Surgeon.

SHEFFIELD ROYAL INFIRMARY.—(1) House-Surgeon. Salary, £100 per annum. (2) Two Anaesthetists.

SMETHWICK EDUCATION COMMITTEE.—Assistant School Medical Officer and Medical Officer of Health. Salary, £350 per annum.

SOUTHPORT INFIRMARY.—Junior House-Surgeon. Salary, £3 3s. a week.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—(1) House-Surgeon; (2) House-Physician (females). Salary, £200 per annum.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, S.W.—House-Surgeon.

WOMEN'S HOSPITAL FOR CHILDREN, Harrow Road, W.—Anaesthetist (female). Honorarium, £10; L.C.C. fees, £75.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Bishop's Stortford (Herts), Brighouse (Yorks, West Riding).

To ensure notice in this column—which is compiled from our advertisement columns; where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

LE BLANC, L. G., M.R.C.S., L.R.C.P., Assistant Medical Officer of the Westminster Union Infirmary.

MAXTON, J. H., M.R.C.S., L.R.C.P., Certifying Factory Surgeon for the Hackney District, co. London.

SCOTT, D. W., L.R.C.P. and S.Edin., District Medical Officer of the Neath Union.

WATTS-SILVESTER, T. H. Esq., M.B., B.C.Cantab., District Medical Officer of the Sturminster Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

BROWN.—At Galtee-More, Barnsley, Yorks, on February 28th, the wife of J. Jopling Brown, M.B.Dun., F.R.C.S.Edin., Lieutenant R.A.M.C. (née Alfreda Tunstall), of a daughter.

CLINE.—On February 24th, at Devonshire House, London Road, Portsmouth, Hants, to Dr. Eric Cline and Mrs. Eric Cline (née Constance De Vere Wheeler), a son.

SHENNAN.—At Aberdeen, on February 27th, the wife of Professor Theodore Shennan, of a son.

DEATHS.

COLLINS.—On March 2nd, suddenly, at Redsteade, East Grinstead, Charles Edward Collins, M.R.C.S.Eng., L.R.C.P.Lond.

JAILLAND.—Previously reported missing, now reported killed in action at Chocolate Hill, Gallipoli, on August 9th, 1915, Lieutenant Stephen Jailland, M.A.Oxon., 6th East Yorkshire Regiment, youngest son of Mr. and Mrs. Jailland, St. Leonards House, York.

MAXWELL.—On March 6th, after an operation, Richard Drummond Maxwell, M.D., F.R.C.S. (Dick), of 7, Devonshire Street, W., Junior Obstetric Surgeon to the London Hospital, the dearly-loved son of the late Richard and Margaret Maxwell, of 102, Oxford Gardens, W. Cremation at Golder's Green Crematorium on Thursday, March 9th, at 2.15. Will friends kindly accept this intimation?

DIARY FOR THE WEEK.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF HISTORY OF MEDICINE.—4.30 p.m., Books, MSS. etc., on view. 5 p.m., Sir William Osler, Bt., F.R.S.: The MSS. of *Religio Medici*. Mrs. Charles Singer: Some English Medical MSS. Mr. R. R. Steele: The Scientific Writings of Roger Bacon. Captain T. A. Malloch (C.A.M.C.): Sir John Finch and Sir Thomas Baines.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF DERMATOLOGY.—4.30 p.m., Cases. 5 p.m., Papers: Dr. George Pernet and others.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF ELECTRO-THERAPEUTICS, 8.30 p.m.—Discussion on Experiments and Experiences with the Coolidge Tube.
SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11, Chandos Street, W., 5.30 p.m.—Treatment of Syphilis, (1) Captain H. J. McGrigor, R.A.M.C., by Concentrated Solutions of Salvarsan; (2) Dr. H. Bayon: in African Tribes.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Tuesday and Thursday, 5 p.m.—Milroy Lectures by Dr. S. G. Moore: Infant Mortality and the Relative Values of Measures Directed to Protecting Infant Lives.

POST-GRADUATE COURSES AND LECTURES.

LONDON SCHOOL OF TROPICAL MEDICINE, Royal Albert Dock, E.
NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.
THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.

THE ENROLMENT SCHEME.

CONFERENCES NEXT WEEK.

At the meeting of the Central Medical War Committee on March 15th it was resolved to hold conferences during next week in Leeds, London, Birmingham, and Bristol, to consider, with representatives of local Medical War Committees, the means to be taken to make the scheme of enrolment successful, and to discuss the various difficulties which arise. After considering the relative advantages of various centres, those mentioned were selected, and the meetings will be held as follows:

LEEDS: Tuesday, March 21st, 3.30 p.m., The Medical School, Thoresby Place, for representatives from the Local Medical War Committees in Northumberland, Durham, Cumberland, Westmorland, Yorkshire, Lancashire, Chesterfield, northern part of Lincolnshire (59 committees—118 representatives).

LONDON: Wednesday, March 22nd, 3 p.m., 429, Strand, W.C., for representatives from Hertfordshire, Bedfordshire, Buckinghamshire, Cambridgeshire, Soke of Peterborough, Huntingdonshire, Isle of Ely, southern part of Lincolnshire, Norfolk, Suffolk, Essex, Kent, Surrey, Sussex, Hampshire, Isle of Wight, Dorsetshire, Berkshire, Oxford, Middlesex, and London (73 committees—146 representatives).

BIRMINGHAM: Thursday, March 23rd, 3 p.m., Midland Medical Institute, Edmund Street, for representatives from Committees in Cheshire, southern part of Derbyshire, Leicestershire, Northamptonshire, Nottinghamshire, Rutlandshire, Shropshire, Staffordshire, Warwickshire, Worcestershire, Anglesey, Carnarvonshire, Denbighshire, Flintshire, Merionethshire, Montgomeryshire, and part of Radnor (24 committees—48 representatives).

BRISTOL: Friday, March 24th, 3 p.m., Bristol University, for representatives from Cornwall, Devonshire, Gloucestershire, Herefordshire, Somerset, Wiltshire, Brecknock, Cardiganshire, Carmarthenshire, Glamorgan, Monmouthshire, Pembrokeshire, and Radnorshire (19 committees—38 representatives).

GENERAL MEDICAL COUNCIL.

EXECUTIVE COMMITTEE.

A MEETING of the Executive Committee was held on a February 21st, when Sir DONALD MACALISTER was in the chair.

Sir William Turner.—A resolution was adopted conveying to the family of Sir William Turner an expression of the Committee's high appreciation of the great services he had rendered in many capacities, and especially as president, to the Medical Council, and its deep sympathy with them in their loss.

Gold Coast Colony.—An ordinance for the registration of medical practitioners and dentists in the Gold Coast Colony passed in 1912, and an amending ordinance, dated 1913, received from the Colonial Office, were considered. It was pointed out that the amending ordinance, by the repeal of one of the paragraphs of the original, appeared, probably by inadvertence, to exclude registered medical practitioners holding British qualifications granted in the Overseas Dominions outside Europe from the right to practise in the Gold Coast Colony. The Committee suggested to the Colonial Office that this result appeared to show the utility of referring all such measures to the Council for comment before they received sanction.

Straits Settlements.—Correspondence with the Colonial Office in regard to the proposed application of Part II of the Medical Act, 1886, to the Straits Settlements was submitted and the answer sent by the direction of the President approved. The last letter from the Colonial Office stated that the observations of the President had been forwarded to the Governor of the Straits Settlements for his consideration.

India.—The receipt from the India Office of a copy of the Indian Medical (Bogus Degrees) Bill introduced in the Council of the Governor-General on September 22nd, 1915, together with a statement of objects and reasons and an extract from the proceedings on that day, was reported.

The statements showed that the Acts of local councils provided in many of the larger provinces of British India for the registration of persons duly qualified to practise Western

medicine or surgery and for the establishment of medical councils with specific powers and duties. It was now considered necessary to pass an Imperial Act restricting the right to issue degrees and diplomas in Western systems of medicine and surgery to duly constituted authorities. It was found that diplomas were being issued by private institutions to untrained or insufficiently trained persons, and that many of these diplomas were colourable imitations of those issued by recognized universities and corporations. The bill would prohibit all persons save certain specified authorities from issuing any degree or diploma in Western medicine or surgery, and penalize persons who voluntarily and falsely assumed any medical title granted by the General Medical Council of the United Kingdom or by the authorities constituted under the Act, as well as the use of colourable imitations of such titles. The bodies recognized by the Act are (1) every university established by an Act of the Governor-General in Council, (2) the State Medical Faculty in Bengal, (3) the College of Physicians and Surgeons of Bombay. The Governor-General in Council may add other bodies at his discretion. The bill does not affect the right of any person to exercise the profession of medicine or to practise as a physician or surgeon, provided he does not pretend to qualifications which he has not got. Homoeopathic, Ayurvedic and Unani practitioners are excluded from the purview of the bill.

The PRESIDENT reported that he had informed the India Office that he was gratified that provision was made for the prohibition of the unauthorized use of degrees in medicine or surgery, and for a penalty for falsely assuming titles, and the Executive Committee agreed with this expression of opinion. It was reported that the United Provinces Draft Medical Bill had also been submitted by the India Office, which had pressed for an answer not later than January 7th. The President had accordingly written to the India Office, stating that in his opinion the Executive Committee would welcome the extension of the provisions of the Bombay Medical Act to the United Provinces, but would regret the inclusion of a clause giving the local government power to sanction the appointment of unregistered persons to important medical offices even in cases of emergency. A reply had been received to the effect that a copy of the President's letter had been sent to the Government of India. The action of the President was approved.

Finance.—Tables showing the accounts of receipts and expenditure of the Council and its branch councils and committees, and of its Dental Fund for 1915, and an approximate statement of assets and liabilities at December 31st, 1915, was submitted by the Senior Treasurer, and the Committee minuted its appreciation of the services he had rendered in the business arising out of the conversion of Consols into war loan stock.

INSURANCE.

RANGE OF MEDICAL SERVICE: OPERATIONS.

THE question whether a certain operation was of a kind which could, "consistently with the best interests of the patient, be properly undertaken by a general practitioner of ordinary professional competence and skill," was recently referred under Article 50 of the Medical Benefit Regulations to a board of referees, consisting of Mr. John Fischer Williams, barrister (chairman), Mr. C. J. Bond, F.R.C.S., and Dr. E. Collingwood Andrews. The operation was for the removal of a papilloma of the lip and was done under chloroform. The Local Medical Committee was at first under the misapprehension that the growth was of a cancerous nature. It came to the unanimous decision that it was not an operation of a kind which consistently with the best interests of the patient could be properly undertaken by a general practitioner of ordinary competence and skill, and the Insurance Committee agreed. The referees, after pointing out that in cases of the kind it is of the highest importance that Local Medical Committees should satisfy themselves that they have before them all material facts before they come to a conclusion, proceeded to make the following pronouncement on the question whether any particular operation falls within the scope of the duties of panel practitioners under their agreement with Insurance Committees. It is not specifically stated that the pronouncement expresses the official view of the Commissioners. The text has been communicated to us by the honorary secretary of the Local Medical Committee concerned.

"Further, we desire, on the invitation of the solicitor to the Insurance Commissioners, to add a word or two with the intention of offering some guidance to Local Insurance and Medical Committees as to the matters principally to be borne in mind where the question arises whether an operation, actually performed by a practitioner on the panel, is one which, consistently with the best interests of the patient, could properly be undertaken by a general practitioner of ordinary professional competence and skill.

"In any such case the operation performed or treatment given is, according to the claim made by the practitioner, of such a nature that he could not have been required to perform or give it under his agreement with the Insurance Committee (see Clause 2 of the model agreement).¹

"It was therefore the practitioner's duty under that agreement before he himself took action, to advise the patient as to the steps which should be taken in order to obtain the necessary treatment (see Clause 4 of the model agreement),² and in so advising, he must be taken to have pointed out to the patient that it was open to him to obtain the services of an expert (either privately or at a hospital or similar institution) or to employ the panel practitioner himself; he must thus have represented himself as possessing the exceptional skill required.

"It is, then, of importance in any given case to ascertain whether any such advice was given by the practitioner to the patient. A practitioner who gives treatment himself without any preliminary advice of the nature indicated is in a weaker position to make good a claim for special remuneration than one who has complied with both the spirit and the letter of the panel agreement.

"A claim of this nature in relation to an operation already performed thus involves the claimant and those who support him in the maintenance of two propositions:

- "(1) That the operation called for skill beyond that ordinarily possessed by general practitioners.
- "(2) That the claimant himself possessed the special skill called for.

"In the consideration of the first of these propositions we deprecate any tendency to seek an answer merely by

¹ "Such treatment as is of a kind which can, consistently with the best interests of the patient, be properly undertaken by a general practitioner of ordinary professional competence and skill."

² "Where the condition of the patient is such as to require services beyond the competence of an ordinary practitioner, the practitioner shall advise the patient as to the steps which should be taken in order to obtain such treatment as his condition may require."

looking at the name of the operation or the disease. In every case the particular facts, both as to the patient and the thing done, must be considered. For instance, the operation of tonsillectomy may involve different degrees of skill and competence according as the patient is a child or an adult of middle age. Or, again, an operation for cancer may vary almost indefinitely in the amount of skill required; and we desire in this connexion to record our dissent from the view of the (Local) Medical Committee as expressed in this case that the mere fact that a papilloma proved to be malignant would without more make the operation of its excision not an operation for a general practitioner.

"The burden of proof is on those who assert the two propositions indicated, though no doubt when once the first proposition is established the successful performance of the operation would in most cases be sufficient evidence to establish the second, especially when the practitioner has given advice to his patient of the nature above suggested. But this burden of proof must be discharged satisfactorily before the conclusion can be reached that the operation was outside the panel agreement. If all that is known is that the operation has been done by a general practitioner, the presumption is that it was a general practitioner's operation, and that no special skill was required.

"If local committees were to assume too readily that operations are not within the competence of the ordinary general practitioner, they would be casting an undeserved slur on the medical profession as a whole, and undermining the well-founded confidence in that profession now felt by the lay public.

"December 30th, 1915."

IRELAND.

AMENDMENT OF THE INSURANCE ACT: IRELAND AND MEDICAL BENEFIT.

THERE is a widespread movement amongst certain Irish public bodies for the repeal of the Insurance Act as applied to Ireland. The demand is based on the assertion that the Act, as administered in Ireland, has not proved worth the cost, and that in the majority of cases insured persons had to wait weeks and months before being paid sickness benefit, with the result that they were left without the money in the acute stage of illness, when it is most needed. It is admitted, however, that since the settlement of the certification dispute, on terms satisfactory to the Irish doctors, the chief administrative difficulties have been removed, and now that the insured can get the certificates for sickness benefit from their medical attendants there is no longer an excuse for any undue delay on the part of approved societies in paying sickness benefits. The public bodies demanding the repeal of the Insurance Act in Ireland are almost exclusively representative of agricultural employers who were never friendly to the application, in any form, of the Insurance Act to Ireland, as they considered it imposed upon them additional burdens in respect of assistance already sufficiently provided under the Poor Law and Medical Charities Acts. It cannot be denied that there is far too much overlapping in the administration of the different Poor Law Acts and the Insurance Act in Ireland, with the result that it is not unusual for insured persons to be receiving relief both from the poor law and insurance, and that this is a hardship on the employer in his capacity also as a ratepayer. It would appear almost certain, in view of the report of the Public Retrenchment Committee, recommending the simplification of the Insurance Act, that the Act will undergo reconstruction in Ireland as well as in Great Britain. At present a committee, representative of the different approved societies, has been appointed in England to prepare and submit evidence in connexion with the working of the Act, to the Treasury Committee now sitting. Many of the larger approved societies in England have also a very large membership in Ireland in both urban and rural areas, and are strongly in favour of extending medical benefits to Ireland; they possess the necessary parliamentary influence, if the Irish Party should desire an amendment of the Act in this direction. The Departmental Committee appointed in the spring of 1913 reported by a majority in favour of extension of medical benefit to urban Ireland. It is probable that the existing Treasury Committee will take into consideration the extension of medical benefit to Ireland as part of the scheme of reconstruction and amendment of the Insurance Act, and it is hoped that a medical member, or

members, representative of the Irish medical profession will be added to this committee.

LOCAL MEDICAL AND PANEL COMMITTEES.

BERKSHIRE.

At a meeting of the Panel Committee on February 4th it was decided to inform the Insurance Committee that there had not been any surplus moneys from the medical practitioners' fund in any year since 1913 to offset the liability to attend insured persons whose names were not upon the list of a practitioner in the area, and that until the Committee could produce such surplus moneys as are referred to in Article 35 (1) it would seem premature to invite the Medical Committee to consider the adoption of these claims.

It was decided to raise no objection to the discontinuance of the use of the term "Rep. mist."

Association Notices.

CHANGES OF BOUNDARIES.

FORMATION OF A GRENADA BRANCH.

The following change has been made in accordance with the Articles and By-laws, and takes effect as from the date of publication of this notice:

That a new Branch of the Association be formed, to be known as the Grenada Branch, and to be coterminous with the Colony of Grenada, thus comprising the Island of Grenada and the Grenadine Islands to the South of the Island of Carriacou, including that Island and the quays adjacent to it, and lying between it and Grenada; also the Islets adjacent to the Northern, Eastern, and Southern coasts of Grenada.

Representation in Representative Body.—In accordance with the decision of the Council, the new Branch forms a Constituency in the Representative Body 1916-17, being entitled to return thereto one Representative.

BRANCH AND DIVISION MEETINGS TO BE HELD.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.—Dr. A. E. Larking, Honorary Secretary (Buckingham), gives notice that a meeting of the Division will be held at the Red Lion Hotel, High Wycombe, on Tuesday, March 21st, at 2.15 p.m., preceded by a lunch at 1.30 p.m. Agenda: Adoption of New Ethical Rules. The Work of the War Emergency Committee (a member of the Central London Committee will attend). Attendance on Dependents of Soldiers and Sailors. Discussion on "Three Years of the Insurance Act," to be opened by members of the Local Medical and Panel Committee.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Surgeon-General (temporary) A. Edmunds, M.B., to the *Pembroke*, additional for Chatham Hospital, Fleet Surgeons A. G. Easton to the *Dreadnought*, P. V. Jackson to the *Defiance*, R. D. Jamieson to *Kang George V. T. D. Halsbury*, M.B., to the *Ganges*, for Shotley Sick Quarters, A. X. Lavertine to the *Field*. Staff Surgeons J. L. Barford to the *Victory*, additional, for disposal; H. V. Wells to the *Monarch*, J. A. Thompson, M.B., to the *President*, Surgeon H. Burns, M.B., to the *Pembroke*, additional; P. G. H. R. Black, M.B., to the *Victory*, additional; temporary Surgeons P. T. Grey, M.B., to the *Cornwallis*; A. G. Evans, M.B., to the *Victory*, additional, for Haslar Hospital; F. M. Lauderdale to the *Nottingham*; A. T. Rivers to the *Field*, additional, for disposal; W. F. Jones to the *President*, additional R.N.A.S.; W. McE. Binning to the *Benbow*. To be temporary Surgeons: W. Francis, R. Castle.

ROYAL NAVAL VOLUNTEER RESERVE.

To be Surgeon Probationers: A. W. Mackie, T. M. Cunningham, K. McFadyen, P. D. T. Roberts, H. V. Edwards, J. F. Howell, J. S. E. Roberts, A. M. C. Young.

ARMY MEDICAL SERVICE.

Colonel C. E. Nichol, C.M.G., D.S.O., M.B., on completion of four years' service in his rank, is retained on the active list under the provisions of Article 120, Royal Warrant for Pay and Promotion, and to be supernumerary.

Lieutenant-Colonel J. P. Silver, M.B., to be temporary Colonel whilst Assistant Director of Medical Services of a Division.

ROYAL ARMY MEDICAL CORPS.

Temporary honorary Major Sir John Collie to be temporary honorary Lieutenant-Colonel.

H. A. Powell, M.D., F.R.C.S., to be temporary honorary Lieutenant-Colonel whilst employed at the Guildford War Hospital.

G. A. Barnatynne, M.D., F.R.C.P., to be temporary Lieutenant-Colonel whilst employed at the Bath War Hospital.

Temporary Captain S. Fleming, M.B., to be temporary Major.

B. Hudson, M.D., to be temporary honorary Major whilst serving with No. 2 Red Cross Hospital (substituted for notification published in the *London Gazette* of July 26th, 1915).

T. E. Holmes, M.D., to be temporary Major whilst employed at the Bagthorpe War Hospital.

Captain R. G. Archibald is seconded for service with the Egyptian Army.

Temporary Captain L. MacLagan-Wedderburn, M.D., relinquishes his commission.

Temporary Lieutenants to be temporary Captains: J. Caton-Shelmerdine, E. S. Gooddy, F.R.C.S., G. M. Mayberry, J. Kirtton, M.B., H. Peters, W. F. Morgan, R. Condy, M.B., E. B. Leech, M.D., B. Wallace, H. E. Gamlen, M.B., E. L. Horsburgh, M.D., T. T. Higgins, M.B., F.R.C.S., G. B. Macgregor, M.B., T. Lovett, M.B., S. C. Westwood, M.D., A. Merrin, M. A. Swan, M.B., E. S. B. Eames, G. A. Borthwick, M.B., H. L. Mann, H. W. Ward, M. J. Mottram, D. F. Shearer, M.B., F.R.C.S., J. F. Steven, D.S.O., M.B., A. C. Giles, M.B., J. Ferguson, M.B., L. H. O. Birkbeck, M.B., T. J. S. Moffett, M.D., R. C. Matison, E. C. Hardwicke, S. J. Henry, M.B., S. W. Coffin, L. G. Brown, P. E. Lones, R. J. McN. Love, M.B., P. W. McKeag, M.B., A. Paterson, M.B., J. McCulloch, M.B., F. D. Atkins, M.B., J. T. Gunn, M.B., J. R. Murray, M.D., C. T. Neve, M.B., F.R.C.S., V. J. Woolley, M.D., H. G. Oliver, J. J. Crawford, M.D., J. McDonnell, J. S. Taylor, M.B., R. A. Steven, M.B., F. E. R. Laborda, C. McShane, M.B., H. H. Sampson, M.B., F.R.C.S., H. E. Battle, S. D. Fairweather, M.B., E. Taunton, M.B., F.R.C.S.

Lieutenants of the Canadian A.M.C. to be temporary Lieutenants: P. W. Tuller, M.D., J. E. Carmichael, M.D., A. E. Whitmore, M.D., R. C. Robinson, M.D., W. S. T. Connell, M.D., D. M. Baillie, M.D. To be Lieutenants: R. P. Smith, M.B., W. M. McLaren, M.B.

The notification regarding temporary Lieutenant S. D. Fairweather, M.B., published in the *London Gazette* of January 13th is cancelled.

To be temporary Lieutenants: L. F. McDowell, M.D., H. A. Boyle, M.B., S. E. Bethell, M.B., C. A. L. Evans, G. C. Metcalfe, R. A. Slater, M.B., A. C. Mackay, W. Corbet, M.B., J. H. Waterhouse, M.D., E. C. E. Barnes, G. G. Old, M.B., E. R. Dermer, A. D. Morris, J. B. Robertson, M.B.; Second Lieutenant J. H. Porter, M.B., from Royal Fusiliers (City of London Regiment); Second Lieutenant T. W. G. Johnson, M.B., from Connaught Rangers; J. R. Stevenson, M.B., W. J. Dilling, M.B., K. T. Limbery, L. R. Pickett, A. McCawley, D. J. Evans, D. MacC. Brown, M.D., C. W. Webb, M.D., J. A. Tippet, C. K. Carroll, P. H. Young, M.B., J. B. Rae, M.B., J. M. Ross, M.B., J. B. Robertson, M.B., E. R. Drake-Brockman, C. I. Hannigan, M.B., A. N. Drury, M.B., A. C. D. Newton, O. W. Gange, J. G. Leslie, M.B., L. A. W. Johnson, temporary Lieutenant S. P. Bedson (from Northumberland Fusiliers), E. K. Williams, J. McHaffie, M.D., C. D. Coyle, M.B., N. Garrard, L. G. Reynolds, H. Mohan, M.D., J. J. Tate, G. L. Pillans, W. L. Paterson, D. J. Bedford, E. L. Hopkins, L. J. O'Donovan, A. F. Wilson-Gunn, M.B., W. H. Pearce, J. R. Brown, M.B., C. B. Tudehope, M.B., A. Trall, M.B., M. Moran, L. M. Mayers, A. B. Mitchell, M.D., W. O. Welby, M.D., J. A. West, S. McNaughton, M.D.

To be temporary honorary Lieutenants: A. W. Adams, N. M. Cummins, M.B., W. L. Thomas, L. ap Ivan Davies, T. Anwyl-Davies.

Temporary Lieutenants relinquishing their commissions: G. Birch, F. S. Scott, M.B., L. E. Eden, M.B., W. C. G. Ashdown, F.R.C.S., E. B. C. Mayrs, M.B., E. Barnett, A. Jamieson, M.B., T. B. McKee, M.B., T. H. Brown, M.B., F. O'C. White, W. E. Dean, M.D., A. E. Clarke, J. H. Yule, M.B., J. A. Martin, M.D., E. L. Marsh, J. G. S. Macpherson, H. Porter, M.B., J. A. Cowie, M.D., F.R.C.S., W. Irving, M.D., E. Johnson, M.B., A. L. Grant, M.B., J. H. J. V. Coats, M.B., A. C. Sandston, G. H. F. Graves, W. S. Baird, M.B., E. W. H. Cruickshank, M.B., L. Ferra, A. W. C. Lindsay, C. H. L. Rixon, H. A. Sharnan, M.D., L. S. Morgan, M.D.

Temporary Lieutenant W. H. Lambert, M.B., relinquishes his commission on account of ill health.

Temporary honorary Lieutenant H. Nockolds, M.B., relinquishes his commission on ceasing to be employed with No. 3 British Red Cross Hospital.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

Lieutenant-Colonel J. Young, M.S., South Midland Field Ambulance, to be Assistant Director of Medical Services, South Midland Division, with temporary rank of Colonel, vice Colonel W. H. Bull, F.R.C.S.E.

Major W. F. McAllister-Hewlings, M.B., from Attached to Units other than Medical Units, to be Deputy Assistant Director of Medical Services, North Midland Division.

Major W. E. Miles, F.R.C.S., from the T.F.R. to be Deputy Assistant Director of Medical Services, London Division.

Captain (temporary Major) C. M. Fegen, from the Sanitary Service, to be Deputy Assistant Director of Medical Services, 2nd London Division.

ROYAL ARMY MEDICAL CORPS.

London Field Ambulance.—Temporary Captain G. E. Nash to be Captain.

London (City of London) Sanitary Company.—Lieutenant G. L. Matthews to be Captain. W. C. Lyons, M.B., to be Lieutenant.

London General Hospital.—Captain K. B. Clarke relinquishes his commission on account of ill health. Lieutenants to be Captains: W. H. Lloyd, H. G. Mallam.

London Sanitary Company.—To be Captains: Lieutenant A. E. Rayner, C. D. Edwards, M.D., O. Cattlin. Captain D. P. M. Farquharson, M.B., from Attached to Units other than Medical Units. To be Lieutenants: T. Legge, W. Johnstone, M.B.

London (City of London) Field Ambulance.—Captain F. V. Denne, from Attached to Units other than Medical Units, to be Captain. M. J. Hackett, M.B., to be Lieutenant.

Home Counties Divisional Sanitary Section.—Captain A. E. Tait, M.B., from North Midland Field Ambulance, to be Captain.

Home Counties Field Ambulance.—Lieutenants to be Captains: J. J. C. Hamilton, A. L. Sharpin.

North Midland Field Ambulance.—Lieutenant (temporary Captain) C. M. Cowper relinquishes his commission on account of ill health.

North Midland Mounted Brigade Field Ambulance.—Lieutenant S. A. S. Malkin to be Captain.

South Midland Field Ambulance.—Lieutenant W. G. McKenzie to be Captain. E. G. Anderson, M.B., to be Lieutenant.

South Midland Casualty Clearing Station.—Major P. S. Hichens, M.B., to be temporary Lieutenant-Colonel whilst in command of a casualty clearing station.

Eastern Mounted Brigade Field Ambulance.—Lieutenant V. M. Wallis to be Captain.

East Anglian Field Ambulance.—Lieutenant (temporary Captain) G. C. Gray relinquishes his commission on account of ill health. Lieutenant R. D. Langdale-Kelham to be Captain.

Southern General Hospital.—Captain G. S. Earl, M.D., relinquishes his commission on account of ill health. Captain H. B. Whitehouse is seconded. Lieutenant R. W. Acheson to be Captain.

Wessex Divisional Sanitary Section.—Lieutenant A. E. Benham to be Captain.

Wessex Casualty Clearing Station.—Lieutenant C. Telfer to be Captain; W. S. Richardson, F.R.C.S.E., to be Lieutenant.

Western General Hospital.—Lieutenants to be Captains: J. G. McKinlay, M.B., L. Oldershaw.

South-Western Mounted Brigade Field Ambulance.—Lieutenants to be Captains: C. D. Reiton, M.B., H. R. Dive.
South Wales Mounted Brigade Field Ambulance.—Lieutenant N. T. K. Jordan, M.B., to be Captain.
Welsh Field Ambulance.—Lieutenant J. E. Dunbar, M.B., from South Wales Mounted Brigade Field Ambulance, to be Lieutenant.
East Lancashire Field Ambulance.—Major F. W. Marsden relinquishes his commission on account of ill health. Lieutenant A. B. Thompson, M.B., to be Captain.
West Lancashire Field Ambulance.—Captain W. R. Stephen, M.B., is dismissed from H.M. service by sentence of a general court-martial. A. S. Parkinson, M.D., to be Lieutenant.
Northern General Hospital.—Lieutenant H. G. Dodd, M.B., to be Captain.
West Riding Field Ambulance.—Major W. S. Kerr, M.B., F.R.C.S.E., to be temporary Lieutenant-Colonel whilst in command of a field ambulance. J. M. Pringle, M.B., to be Lieutenant.
Highland Mounted Brigade Field Ambulance.—Lieutenant W. H. Milligan to be Captain.
Highland Field Ambulance.—Lieutenant C. G. Skinner to be Captain.
Lowland Field Ambulance.—To be Captains: Lieutenant (temporary Captain) N. MacInnes, M.B., Lieutenants J. W. G. H. Riddel, R. Lawson, M.B.
Supernumery for Service with the O.T.C.—V. G. L. Fielden, M.D., to be Lieutenant (temporary) for service with the Medical Unit, Belfast University Contingent, Senior Division, O.T.C.
Attached to Units other than Medical Units.—To be Captains: Captain G. E. Nash, from London Field Ambulance; W. L. Griffiths, M.D., F.R.C.S., late Captain R. A. M.C. (T.F.) (substituted for announcement published in the *London Gazette* of January 21st), Lieutenants H. Connop and W. P. Tindal-Atkinson.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BOLTON INFIRMARY AND DISPENSARY.—Second and Third House-Surgeons. Salary, £200 and £180 respectively.
BRISTOL GENERAL HOSPITAL.—Casualty House-Surgeon. Salary, £175 per annum.
BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—(1) House-Surgeon; (2) House-Physician. Salary, £150 per annum.
BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.
BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.
CAMBRIDGESHIRE ASYLUM, Fulbourn.—Junior Assistant Medical Officer (male). Salary, £200 per annum, rising to £250.
CARDIFF: KING EDWARD VII HOSPITAL.—Two House-Surgeons. Salary, £140 per annum.
CHARING CROSS HOSPITAL.—Medical Registrar.
EALING: KING EDWARD MEMORIAL HOSPITAL.—Resident Medical Officer. Salary, £100 per annum.
EVELINA HOSPITAL FOR WOMEN, Southwark.—(1) House-Surgeon; salary, £150 per annum. (2) Clinical Assistants in the Out-patient Departments.
GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.
KIRK WALL: PARISH OF EDAY.—Medical Officer.
LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.
LIVERPOOL: DAVID LEWIS NORTHERN HOSPITAL.—(1) House-Physician; (2) Two House-Surgeons. Salary, £150 per annum.
LONDON UNIVERSITY.—Examiners in (1) Medicine, (2) Bacteriology, (3) Mental Diseases and Psychology, (4) Pharmacology.
MANCHESTER CHILDREN'S HOSPITAL.—Two Resident Medical Officers (ladies). Salary, £100 per annum and monthly bonus of £5 during the war.
NOTTINGHAM CITY ASYLUM.—Senior Assistant Medical Officer. Salary, £300 per annum.
PUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.
ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Out-patient Surgical Officer. Salary, £50 per annum.
SALISBURY (GENERAL) INFIRMARY.—(1) House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.
SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.
SMETHWICK EDUCATION COMMITTEE.—Assistant School Medical Officer. Salary, £350 per annum.
SOUTH LONDON HOSPITAL FOR WOMEN.—(1) Assistant Physician; (2) Assistant Surgeon (females).
STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—(1) House-Surgeon; (2) House-Physician (females). Salary, £200 per annum.
TOTTENHAM DISTRICT COUNCIL.—Medical Officer (part-time) in connexion with Ante-natal Clinic. Salary, 1½ guineas per session.
VICTORIA HOSPITAL FOR CHILDREN, Tite Street, S.W.—House-Surgeon.
WALLSEND EDUCATION COMMITTEE.—Temporary School Medical Officer. Salary, £300 per annum.
WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—Senior Student to act as Assistant to House-Surgeon.
WOMEN'S HOSPITAL FOR CHILDREN, Harrow Road, W.—Anaesthetist (female). Honorarium, £10; L.C.C. fees, £75.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Billingborough (Lincoln), Lydbrook (Gloucester).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

CLUCKIE, M. G., M.D., Consulting Ophthalmic Surgeon, Victoria Eye Infirmary, Paisley.
GILCHRIST, J., M.D., Ophthalmic Surgeon to the Victoria Eye Infirmary, Paisley.
MERRICK, W. J., M.B., B.Ch.Dubl., Certifying Factory Surgeon for the Castleknock District, co. Dublin.
SIMPSON, H., M.B., District Medical Officer of the Tonbridge Union.
SMITH, A. Wood, M.D., Medical Superintendent, Royal Hospital for Sick Children, Yorkhill, Glasgow.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

MILNE.—At The Chestnuts, 9, High Road, Streatham, on 12th inst., the wife of George Milne, M.D., D.P.H., of a daughter.
MILNE.—On March 10th, the wife of Robert Milne, M.D., M.S., F.R.C.S., 21, Park Crescent, Portland Place, W., of a son.
WHEELER.—At the Nursing Home, 13, St. James's Road, on 4th inst., the wife of Lieutenant H. Q. O. Wheeler, R.A.M.C. (Dora E. Paterson, M.B.), 247, Boundary Street, Liverpool, of a son.
WILLAN.—At 23, Claremont Place, Newcastle-upon-Tyne, on 14th March, 1916, the wife of R. J. Willan, M.V.O., F.R.C.S., Staff Surgeon, R.N.V.R., of a son.

MARRIAGE.

HANCOCK—WALKER.—On March 4th, at St. Stephen's Church, Norwich, by the Rev. John Huxley, Lieutenant T. W. Hancock, R.A.M.C.(T.), son of J. H. Hancock, Norwich, to Rosetta Isabel Walker (Betty), daughter of T. Walker, Wolverhampton.

DEATHS.

BARNICOT.—On March 10th, at Queen Street, Hitchin, Joseph Barnicot, M.D.Cantab., of typhoid fever.
BENNETT.—March 5th, at Hillside, Upper Lydbrook, Ross-on-Wye, of pneumonia, Edward Bennett, L.E.C.P. and L.R.C.S. Edin., elder son of the late Edward Augustus Bennett, of Marsden Hall, Nelson, Lancashire.
CLARK.—On the 23rd January, at Bulawayo, after a short illness, William Gladstone Clark, M.A.Cantab., F.R.C.S. Eng., aged 48.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 8.30 p.m.—Discussion on Gunshot Wounds of the Spine, to be introduced by Captain J. Collier (Medical Aspect) and Lieutenant-Colonel D. Armour (Surgical), to be followed by Major F. W. Mott, F.R.S., Captain W. Harris, Dr. L. Guthrie, Captain E. Adams, Captain F. Buzzard, Major G. N. Pitt, Dr. S. A. K. Wilson, and Dr. E. G. Fearnside.

WEDNESDAY.

HUNTERIAN SOCIETY, 1, Wimpole Street, W., 9 p.m.—Annual Discussion: The Relation of the Medical Profession to the State and the Community (Dr. F. J. Smith, Sir John Collie, Dr. T. D. Lister, Mr. Lawson Dodd).

ROYAL SOCIETY OF MEDICINE: SECTION OF OPHTHALMOLOGY, 8.30 p.m.—Colonel Lister, A.M.S., and Lieutenant-Colonel Gordon Holmes, R.A.M.C.: Disturbances of Vision from Cerebral Lesions, with special reference to the Cortical Representation of the Macula.

FRIDAY.

ROYAL SOCIETY OF MEDICINE: SECTION OF STUDY OF DISEASE IN CHILDREN, 4.30 p.m.—Cases and Specimens. Papers:—Dr. D. H. Hutchison: A Case of Hemi-hypertrophy, with post-mortem examination. Dr. H. C. Cameron: Osteogenesis Imperfecta, illustrated by cases and skiagrams.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.
THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

THE ROYAL COLLEGES IN LONDON.

APPOINTMENT OF JOINT ADVISORY COMMITTEE.

At the meeting of the Council of the Royal College of Surgeons on March 10th the resolution of the Central Medical War Committee asking the Royal Colleges to appoint an Advisory Committee to advise on questions relating to the requisition of medical men for military service was considered, and the following resolution was adopted, together with the two riders as stated:

That the Royal College of Surgeons decides to join the Royal College of Physicians in forming an Advisory Committee to advise the Government Department concerned, through the Central Medical War Committee, on any case affecting the several metropolitan hospitals and medical schools during the war in respect of medical men on their staffs (including residential and teaching staffs), with regard to whom the question arises as to whether a particular individual is indispensable, or would suffer excessive personal hardship if required to enter military service; and further, similarly to advise on the case of any other medical man in England or Wales, in respect of whom the Central Tribunal under the Military Service Act of 1916, or the Central Medical War Committee, thinks it desirable that the Advisory Committee should be consulted.

Rider 1.—It is of course understood that the opinion of the Advisory Committee will be transmitted to the Government departments concerned without alteration.

Rider 2.—It would probably save time if the Advisory Committee would, in the first place, institute a survey of the minimum necessities of the several metropolitan hospitals and medical schools in respect of staff.

It was further resolved that in the event of the Royal College of Physicians deciding to take part in forming such a committee the representatives of the Royal College of Surgeons on it should be:

Sir W. Watson Cheyne, Bt., K.C.M.G., C.B., President, for whom, when absent Sir Rickman J. Godlee, Bt., K.C.V.O., is deputed to act.
Mr. William F. Haslam,
Mr. D'Arcy Power,
Mr. Charles Ryall,
With power to co-opt two others.

The resolution of the Central Medical War Committee was considered at a comitia of the Royal College of Physicians of London on March 17th, when the following resolution was passed:

That this College is willing to join the Royal College of Surgeons in forming an Advisory Committee to give advice to the Government in relation to medical practitioners in the metropolitan district required for service in the army, and also to advise on cases of special difficulty elsewhere in England and Wales. Such advice to be communicated through the Central Medical War Committee without alteration to the Government departments concerned.

CONFERENCES OF REPRESENTATIVES OF LOCAL MEDICAL WAR COMMITTEES.

LEEDS.

The conference to which representatives of the Local Medical War Committees in the north of England had been invited was held in the theatre of the Medical School, Leeds, on March 21st. The chair was taken by Major A. S. F. Leyton, R.A.M.C.T., Chairman of the Leeds Local Medical War Committee, and the arrangements were made by Dr. James Allan, Honorary Secretary of the Leeds Committee. There were about one hundred present, including, besides members of the Leeds Local Medical War Committee and some local practitioners, representatives of Local Medical War Committees all over the north of England.

Dr. Cox, who attended on behalf of the Central Medical War Committee, said that the main business of the meeting was to enlist the enthusiasm of those present in making the enrolment scheme a success, and, judging from the figures of the Committees represented, there could be little doubt of success in most of the areas in the north. He dealt with the various objections to the enrolment scheme, and said that it was apparent that the method of obtaining recruits for the R.A.M.C. which had been used up to now would not do for the future. Sections of the profession had been reached which found it extremely difficult to give up its civil work, and therefore closer organization was required. No alternative to enrolment had been suggested except compulsion, which could not be applied to the medical profession alone. Compulsion, though it would render the task of the profession easier by ensuring that no man should escape doing his duty, would only remove the smallest of the profession's difficulties. The Local Committees would still be faced with the problems of taking the right men in the right order, of organizing the medical work of the district so as to distribute the burden on those remaining as equally as possible, and of protecting the interests of those who went. As practical men they must use the means they possessed because the needs of the country could not wait. The enrolment scheme was an attempt to organize the medical profession by the medical profession for the good of the nation. The profession could do this particular work much better for itself than any State department. It was to the advantage of the profession to organize itself, and thus see that local difficulties were dealt with by people who knew those difficulties. The enrolment scheme, if a success, would be fair and economical. It would not be fair unless the great majority of the men enrolled, but the Central Committee had given its promise that it would not victimize the public-spirited men who enrolled by proceeding to call them up if the response was inadequate. What should be considered an adequate response could not be settled until the total number of men to be dealt with was known, and that could not be ascertained until the Local Committees had eliminated from their lists those ineligible for enrolment. If the scheme were a success it would be fair, because it would ensure that all the men (with exceptions, who could always be relied upon not to help in any organized scheme) were available for doing their country's work whether in the army or by remaining

at home. The fairness of the scheme lay largely in the fact that it was to be worked by the co-operation of Local Committees which would bring to bear local knowledge, and a Central Committee which could be relied upon to take a large and impartial view. The scheme of classification also would serve as a rough guide to selection, so that the men with the fewest ties and difficulties would go first. The scheme was economical because it would form a reserve for the R.A.M.C., which could be drawn upon as wanted, and thus the Director-General, instead of keeping up a constant demand in case the supply might run short, might well be content to wait until he was certain that he needed more men, and then only to ask for the minimum number required, knowing that the men were there when wanted. Dr. Cox expressed the opinion of the Central Medical War Committee that the profession had now a magnificent opportunity of showing its organizing capacity and patriotism. No other profession had anything like the same opportunity, because no other profession, as such, was required for national purposes. If within the next few weeks the country could be assured that arrangements had been made that would provide for the needs of the army, and at the same time those of the civilian population, it would redound to the credit of the profession.

Many questions were asked and certain difficulties were raised which were mainly answered by the experience of the representatives present. The meeting was most satisfactory and clearly showed that the Central Medical War Committee could depend upon the loyal and enthusiastic support of those present.

LONDON.

The conference of the representatives of the Local Medical War Committees of London and the eastern and south-eastern counties was held at the house of the British Medical Association in London on March 22nd. The Council Chamber was filled to the limit of its capacity. Dr. Charles Buttar, who was in the chair, in an opening statement said that only by such arrangements as were provided by the enrolment scheme could there be any possibility of choosing with fairness those members of the profession who could most easily go. Without it, no one could tell whether his private difficulties were greater or less than those of another, or whether the district where he worked could spare a doctor more easily than another district; but, if all enrolled, then there would be no difficulty in choosing fairly. Mr. E. B. Turner emphasized the fact that the Central Medical War Committee was acting as a buffer between the War Office and the profession, and also the War Office and the population. Without such a committee there would be no check on the manner in which the War Office might seek to get the men it wanted.

Difficulties that had arisen in the work of the Local Medical War Committees were then put forward by several speakers. Among the chief were these: It was asked what was the relation of the local committee to the Central Committee, and which had the determining voice as to whether men could or could not go from a district? The answer was that the voice of the local committee must always be the first consideration, but that without counterbalance of the national view possessed by the Central Committee the local committee might have difficulty in estimating the situation. A good deal of discussion arose as to what should be considered success for the enrolment scheme. The demand was that it should be "substantially successful" before men should be called up under the scheme. Several members of the Central Committee plainly stated that this was the view of the committee. It would not proceed to call up men without the knowledge that the vast majority of available men had enrolled. One speaker asked what would happen supposing the Committee considered not enough men had enrolled. Would the enrolled men have the chance of being used? The answer was "Certainly. They would be written to and asked if they were willing to take service should they be required."

One of the speakers, who stated that he was under 45, and had enrolled and was willing to take service even at considerable sacrifice to himself, made a strong appeal to the patriotism of the profession to enrol to a man, and to trust the Central Medical War Committee, which he maintained was formed by the profession to aid the profession in a case of national necessity.

INSURANCE.

SURCHARGES.

DECISIONS OF INSURANCE COMMISSION FOR ENGLAND IN CERTAIN CASES.

WE have received for publication from the National Health Insurance Commission (England) copies of the decisions of the Commissioners in three appeals which have been heard against "surcharges" imposed by Insurance Committees.

By Article 40 of the National Health Insurance (Medical Benefit) Regulations (England), 1913, it is provided that:

Where it appears to the Panel Committee that by reason of the character or amount of the drugs or appliances ordered for insured persons by any practitioner or practitioners on the panel, the cost of the supply of those drugs and appliances is in excess of what may reasonably be necessary for the adequate treatment of those persons, the Panel Committee may, and if any representations to that effect are made to them by the Pharmaceutical Committee shall, make an investigation into the circumstances of the case, whether in respect of the drugs and appliances ordered by an individual practitioner or generally as to the orders given for drugs and appliances by practitioners on the panel.

The article also provides that:

The Panel Committee shall, after hearing the Pharmaceutical Committee and any practitioner concerned, make a report to the Committee, and if, after considering the report, the Committee are of opinion that an excessive demand upon the Drug Fund has arisen owing to orders given by a practitioner which are extravagant either in character or in quantity, they may, if they think fit, make such deduction from the amount payable to that practitioner by the Committee as they think fit, and shall pay the amount so deducted to the credit of the Drug Fund.

The article further provides that a practitioner in whose case the Committee has decided to make a deduction is entitled to appeal to the Commissioners, whose decision is final.

This is the machinery under which "surcharges" are imposed, and the decisions, the substance of which we print below, are those of the Commissioners to whom the surcharged practitioners appealed.

I.

In the first case a Panel Committee had appointed five of their number as a subcommittee to make an investigation into the circumstances of certain cases, including that of Dr. A., in which it was alleged that there had been excessive ordering of drugs. Dr. A. attended before this subcommittee, at which a number of his prescriptions were discussed. The subcommittee reported to the Panel Committee with the result that the latter passed a series of resolutions dealing with certain of Dr. A.'s prescriptions. As typical of these resolutions the Panel Committee resolved that "prescriptions for phylacogen be surcharged at full cost." Copies of these resolutions were transmitted to the Insurance Committee, and the Insurance Committee in due course surcharged Dr. A. to the extent of £12 11s. 9d.

The Commissioners to whom Dr. A. appealed held that although the Panel Committee may properly delegate the duties of investigation to a subcommittee, the practitioner has, under the regulations, the right to appear before the Panel Committee itself, and that inasmuch as Dr. A. had had no such opportunity the matter must be reopened and Dr. A. granted a formal hearing. They further stated that the resolutions which the Panel Committee had forwarded to the Insurance Committee were insufficient in that the regulations required a report in terms which set out the facts upon which the Panel Committee formed their opinion in order that the Insurance Committee might themselves form an opinion on the matter.

The appeal was therefore allowed on these grounds.

II.

In the second case it appeared that the Insurance Committee, the Panel Committee, and the Pharmaceutical Committee had entered into an arrangement whereby various analyses of doctors' prescriptions were prepared under the supervision of the clerk to the Insurance Committee, who from time to time reported the results to the Panel and Pharmaceutical Committees. In this way statistical tables were got out for a certain period showing the total amount of the chemists' accounts, the sum available for their payment, the numbers of prescriptions

issued, the average price per prescription, and the average cost per insured person, both in respect of all the doctors and in respect of each doctor separately. In the case of Dr. B. these tables showed that, on the basis of the number of persons on his list, the amount of his prescriptions exceeded the average price for all the doctors by £174 2s. 10d., or an excess of 22.02d. per insured person for the half-year. On the basis of the number of prescriptions issued, the excess worked out at £205 19s. 8d., or an excess of 16.14d. per prescription. The Panel Committee, at the instance of the Pharmaceutical Committee, considered these tables, afforded the doctors (including Dr. B.), whose prescriptions appeared to them to call for inquiry an opportunity of explaining them, and drew up a report stating that in their opinion Dr. B.'s prescriptions were extravagant and unnecessary in frequency, and estimating the excess thus caused to be 25 per cent. of the cost of the whole of his prescriptions for the period in question. This report was submitted to the Insurance Committee, who replied requesting the Panel Committee to state the method adopted in estimating the excess. The Panel Committee wrote in reply that the prescriptions examined were extravagant, and there was evidence of unnecessary frequency in prescribing; that the doctor was unable to justify his prescriptions; that the tables of statistics had then been referred to and the same extravagance appeared to persist throughout the whole of the doctor's prescribing, and that, there being no method laid down by authority of estimating the excess, they had considered that 25 per cent. of the cost of the whole of the prescriptions was a fair estimate.

Thereupon the Insurance Committee, after consultation with the Medical Benefit Subcommittee of the Insurance Committee, decided to surcharge Dr. B. to the extent of £77 6s. 10d.

It was urged on behalf of Dr. B. that the decision of the Insurance Committee was arrived at on "purely mathematical grounds" in that, having ascertained the average cost of prescriptions given by all doctors in the area, they found that Dr. B. was guilty of extravagance merely because the cost of his prescriptions exceeded that average. The Commissioners were of opinion that this contention was unsupported by the facts, and considered that "in an area where it is found that the cost of a doctor's prescriptions is considerably in excess of the average cost obtaining in that area, there is *prima facie* evidence of extravagance on the part of that doctor, which, however, it is open to him to rebut, if he can, by explanation of the special circumstances of his patients which would justify the apparent excess." The Commissioners therefore dismissed the appeal, at the same time reducing the amount of the surcharge to £25.

III.

In the third case the facts were as follows:

Representations as to the excessive ordering of drugs in the area of the Insurance Committee were made with regard to certain doctors in 1913, and were considered by the Local Medical Committee, on which, under regulations then in force, rested the duty of making the necessary investigation. No definite steps were, however, taken by the Local Medical Committee up to the time when the Panel Committee came into existence in April, 1914, and took over the duty of investigations in accordance with Article 40 of the Medical Benefit Regulations, 1913.

In July, 1914, at a joint meeting of the Panel, the Pharmaceutical, and the Insurance Committees, it was agreed that a certain pharmaceutical chemist should make an analysis of the prescriptions of the doctors which had been considered previously by the Local Medical Committee. This chemist made two reports. The first was in form similar to that in the second case above, and showed a number of averages both of the prescriptions of all the panel doctors in the area and of the prescriptions of the individual doctors. In the second report the chemist dealt particularly with prescriptions given by certain doctors which appeared to him to be *prima facie* of a specially expensive character.

After receiving the first report the Panel Committee invited the doctors in question to meet them in a "round table" conference which was held in October, 1914. At this conference no attention was drawn to individual prescriptions. In November the Panel Committee drew

up a report to the Insurance Committee in which they stated that the prescriptions of the doctors during 1913 had been examined with the result that they considered that there had been undoubted over-prescribing. In the meantime the chemist made his second report, and this, together with the report of the Panel Committee, was before the Insurance Committee, when they decided that there had, in fact, been over-prescribing on the part of all the doctors in question, and that the amount by which each doctor's prescription had exceeded the cost which would have been incurred on the basis of the general average should be deducted from the amount of the remuneration payable to him.

A number of the doctors appealed. The Commissioners, however, being dissatisfied with the nature and form of the report which the Panel Committee had made, caused the matter again to be considered by that Committee. The Panel Committee accordingly drew up a second report in March, 1915, to the Insurance Committee, and this time they had before them the chemist's second report. Their report was again adverse to the doctors. The Insurance Committee then referred back this second report to the Panel Committee with a request that they would see the doctors involved and hear their explanations, and then report to them again.

The Panel Committee then caused each doctor to be furnished with an extract from the chemist's second report containing particulars of cases to which attention was drawn by the chemist, and the doctors were invited to attend before the Panel Committee in a series of conferences. These conferences were duly attended by certain of the doctors concerned, and others did not attend. Those who did attend gave general explanations in reference to those matters affecting them, and the others wrote similar explanations. Individual prescriptions, however, were not discussed. The result was that the Panel Committee confirmed their report of March, 1915, and the Insurance Committee adopted the advice of the Panel Committee. Upon these facts the Commissioners decided that the procedure of the Panel Committee and, to a less extent that of the Insurance Committee, was defective in a way and to a degree which seriously prejudiced the conclusions at which they respectively arrived; that they appeared, in the first instance, simply to have considered how a deficiency in the Drug Fund had been brought about and how that deficiency could be made good, and their first report was made at a time when they had before them no evidence which, standing alone, could be regarded as relevant to that question; and that when the attention of the Panel Committee was directed to the true issues to which it was their duty to address their minds, they had nevertheless refrained from properly investigating the matter. The Commissioners accordingly considered that injustice had been done, themselves reviewed the evidence, and came to the conclusion that, with regard to certain of the doctors, the deduction appealed against should be set aside altogether, and, with regard to others, that it should be reduced.

STOCK MIXTURES.

The West Ham Insurance Committee on December 9th addressed a letter to the National Association of Insurance Committees, stating that it had had under consideration the provisions of the tariff for drugs and appliances coming into operation on January 1st, 1916, and that it found that a note (a) to Part III to the tariff "facilitates the use of stock mixtures by the panel practitioners." The letter went on to request the Association of Insurance Committees to take the question up with the Insurance Commission and to protest strongly. The Association of Insurance Committees forwarded this letter to the British Medical Association on February 18th, and invited observations. The following letter has been in consequence written, and is published for information:

British Medical Association,
429, Strand, London, W.C.

Sir, March 14th, 1916.

Stock Mixtures.

The Insurance Acts Committee of the British Medical Association has instructed me to thank your Association for the opportunity of commenting on the letter of the West Ham Insurance Committee.

No indication is given in that letter as to why your Associa-

tion is expected to protest against the use of stock mixtures as limited by the Note (a) of the 1911 Tariff. This Note states that a fee of 2/3d. will apply to such preparations not exceeding 10, in any one area, as have been selected by the Panel Committee either from a formulary or special pharmacopoeia locally adopted for use in prescribing by practitioners on the Panel, or from a list agreed between the British Medical Association and the Pharmaceutical Society of Great Britain (or in default of such agreement adjudged by the Commissioners) to be capable of being stocked in bulk without deterioration.

So far as this Association is able to gather, the objections to stock mixtures are:—First, that their use is likely to be to the detriment of insured persons; secondly, that they are objectionable to the professional feelings of the chemists; and thirdly, that at the reduced fee which is chargeable for dispensing them (namely 1/4d. less than the ordinary mixture) their use is unfair from a financial aspect to the chemist.

Interest of Insured Persons.

It is the duty of every doctor to give to, or order for, his patient whatever he thinks is required in the medical interests of the patient. My Committee must therefore lay it down as fundamental that no responsible body representing the medical profession could countenance the use of stock mixtures if it could be shown that such use is likely to be detrimental to the interests of patients. The fact that the patients are panel patients in no way affects the case.

A stock mixture is a combination of drugs which is put up in bulk for convenience sake. The convenience arises from the fact that the mixture is in constant demand, and it is obviously easier to make up a considerable quantity at a time and to pour out a measured quantity of the mixture as required, than to weigh or measure out the quantities of the individual drugs at each operation. Time is also saved by giving the mixture a short name which is easier to write than the prescription in full would be.

A stock mixture is no new thing. It will be found that almost every doctor who in private practice dispenses his own medicines keeps in bulk certain mixtures that he uses regularly. This is with the object of saving his time for more important professional work. Moreover in every hospital it will be found that, for the same purpose of saving time, a certain number of mixtures in constant use are kept made up in bulk. Any objection therefore to the use of stock mixtures for insured persons would apply equally to their use for private patients and to their use by the most eminent hospital physicians and surgeons for hospital patients. The prescriptions from which these stock mixtures are made are the result of long practical experience which has shown that certain cases of common occurrence can generally best be treated by certain combinations of drugs. It would of course be possible to combine these drugs freshly every time it was desired to order them, and this should be done if it were found that any deterioration took place when the combination of drugs is kept in bulk. But there are many combinations of drugs which do not deteriorate, and it must be noted that the Tariff carefully guards against mixtures being used as stock mixtures if they would deteriorate when stocked in bulk. The Association has given a good deal of attention to this question of possible deterioration in its negotiations with the Pharmaceutical Society as regards the suggested list of Stock Mixtures which has recently been submitted to the Commissioners. The Association took the best expert advice as to the keeping qualities of the mixtures on this list, and scientific experiments were made with a view to settling the various technical questions that arose. It was only on being satisfied as to these points that the Association submitted its list for the consideration of the Pharmaceutical Society, and afterwards to the Commissioners. Moreover, the Commissioners have also to be satisfied and they will no doubt take independent advice.

It may be said that there is a risk that the problematical gain to the Practitioners' Fund of the 1/4d. per prescription, accruing to the Drug Fund from the use of stock mixtures may outweigh the duty which the doctor owes his patient. The Association thinks it only necessary to put this in black and white to show its absurdity. Quite apart from ordinary human feeling and from the professional instinct which is inculcated all through his training and leads the doctor instinctively to do the best he can for his patient, it is to the financial interest of the panel doctor to get his patient well as soon as possible. Any financial gain which might arise from the saving to the Drug Fund (the interest in which is remote so far as the doctor is concerned) is a mere bagatelle when compared with the additional time and labour imposed on him if he went on attending a patient whom he might have cured earlier had he given the patient different medicine.

The Association is therefore of opinion that Insurance Com-

mittees need have no fear that the use of stock mixtures will lead to inefficient treatment of insured persons. The experience of the profession has evolved certain mixtures which are known to be efficacious in certain common complaints. Scientific pharmaceutical experiments, as well as long experience have shown that some of these mixtures can safely be kept in bulk for any reasonable time. It must be remembered that whether stock Mixtures are used in any area or not it is quite certain that large numbers of patients in all classes will be treated by stock prescriptions, that is to say that the doctor in treating a common complaint will continue to prescribe a mixture which experience or the teaching of experts have shown to be efficacious in that particular complaint. Thus, if the prescriptions of an area, whether used for private or panel patients, were examined, it would be found that there was constant repetition of certain well-known formulae. If this be so, the only two practical questions that arise for the consideration of Insurance Committees are, whether a small number of the mixtures resulting from these formulae can be safely stocked in bulk for a reasonable time, and if so, whether the Drug Fund should be allowed any financial advantage that is to be gained by such stocking in bulk.

Professional Objections of the Chemist.

The medical man must be recognised as the sole judge as to whether any prescription is a proper one in the interests of his patients. Therefore the Association cannot admit the right of any lay person or body of persons to question the propriety, from a medical point of view, of any prescription that is given by a qualified medical practitioner. But we understand that in some areas chemists have objected to the use of stock mixtures because they say that all such stocking in bulk is wrong from the pharmaceutical point of view, because some change takes place in the mixtures which renders them less efficacious.

This is a point on which of course pharmaceutical opinion is entitled to serious consideration. Accordingly the Association has taken the opinion of Mr. E. F. Harrison, Pharmaceutical Chemist, B.Sc., Lond., F.I.C., F.C.S., a well known consulting and analytical chemist, who occupies such a position in the pharmaceutical world that his opinion on any pharmaceutical question would be received with the greatest respect. Guided by his opinion the Association has submitted to the Commissioners a list of mixtures suggested for use under Note (a) of the Tariff, after consultation with the Pharmaceutical Society. Mr. Harrison was of opinion that the mixtures so submitted were sound from the pharmaceutical point of view, and would keep without deterioration for any time that they might fairly be expected to be stocked in the circumstances laid down in Note (a) of the Tariff.

Chemists can hardly be serious in their opposition to all stock mixtures, seeing that the majority of chemists themselves make and sell stock mixtures. This can be proved by inspection of the window and shelves of nearly any chemist in business. He puts up for sale cough mixtures, tonics, etc., which are made in large quantities and bottled off, and which it is to be presumed he would not offer for sale unless he was convinced that such mixtures were correct from the pharmaceutical point of view, and that their use would not be likely in any way to prejudice the person who took them. The very best houses in the wholesale drug business make and sell large quantities of stock mixtures for the use of doctors and chemists.

The Association sympathises with the leaders of the pharmaceutical profession in not desiring to extend unduly the use of either stock prescriptions or stock mixtures. The doctor must not be discouraged from varying prescriptions, in the exercise of his professional judgment, to suit the varying conditions of his patients, nor should the chemist be reduced to a mere compounder of mixtures in bulk. But, as is indicated by the whole of the argument of this letter, stock mixtures are only intended to be used in cases where experience has shown that such mixtures are as efficacious as an extemporaneously prepared prescription. There will always be a large number of cases in which the symptoms of the patient will at once suggest to the doctor the necessity of using mixtures which must be extemporaneously prepared.

Alleged Unfairness to the Chemist on the Financial Side.

On this point also the British Medical Association has taken expert opinion which is to the effect that from the economic point of view the chemist's time in dispensing a stock mixture is paid for at a higher rate than when he is dispensing an ordinary prescription. Take an example in which the times occupied in dispensing have been verified by experiment. Half a gallon (80 oz.) of a stock mixture is made up at one time (taking 9 minutes). If ten 8 oz. bottles are filled from this, taking two minutes each, the whole time taken is 29

minutes. The dispenser is paid 1s. 3d. for these bottles at tariff rates, or at the rate of 2s. 7d. an hour. If the 80 oz. were dispensed as five 16 oz. bottles (a more unusual quantity) the total time would be 19 minutes, and the payment 7½d. or 1s. 11½d. an hour.

An admittedly fair average time for dispensing an 8 oz. mixture from an ordinary prescription is 6 minutes. To dispense 10 bottles separately takes one hour, and the dispenser is paid 1s. 8d. for this at the ordinary tariff rate of 2d. per bottle. It would thus appear that it will pay the chemist well to treat as a stock mixture any mixture of which half a gallon will be used before it deteriorates.

The Association submits these facts and opinions to the National Association of Insurance Committees, and trusts that they will receive that unbiased consideration which the stock mixture question has not had up to the present in discussions at Insurance Committee meetings. Representatives of Approved Societies have urged, quite honestly, no doubt, but without any knowledge of the subject, that the interests of insured persons would suffer if stock mixtures were allowed to be used. Representatives of chemists have backed up these statements, and have also appealed to the sympathies of the Insurance Committees on the ground that to allow stock mixtures to be used would be unfair to the chemists who work for the Committees. Both these suggestions are in the opinion of this Association entirely unfounded.

I am, Yours faithfully,

ALFRED CON,
Medical Secretary.

Edwin Potts, Esq.,
Hon. Secretary,
National Association of Insurance Committees,
20, New Elvet, Durham.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

The Supply of Serums and Vaccines.—At the meeting of the London Panel Committee on March 21st the question of the supply of serums and vaccines was considered in connexion with the pronouncement by the Insurance Acts Committee of the British Medical Association that the provision of proper and sufficient medicines as contemplated by the Insurance Act did not include the supply of salvarsan, vaccines, serums, etc. The Pharmacy Subcommittee of the Panel Committee had a recommendation expressing the opinion that the supply of these drugs was contemplated in the Act, but recommended that they should be supplied at the cost of the special drug fund. After some discussion, the subcommittee's recommendation was lost on a show of hands.

The Measles Order.—The Local Government Board's Order with regard to the notification of measles, as well as the scheme for the nursing of measles propounded by the Central Council for District Nursing in London, was considered, and the Chairman, Dr. Cardale, said that in one London borough the Public Health Committee had made arrangements with the nursing associations for the payment of a flat rate, and for the medical officer of health to be technically in charge of cases of measles, involving the visiting of cases by him, if necessary, for diagnosis. Dr. B. A. RICHMOND said that the Central Council of District Nursing had introduced safeguards against the dangers of unqualified practice; but there was a widespread feeling that it was going to be the policy of the Local Government Board to appoint full-time officers, and the Panel Committee should nip any such movement in the bud. Dr. MAJOR GREENWOOD also thought that the profession should check these inroads upon the work of the medical practitioner. Although there were protests that the public interests were not being sufficiently considered, a recommendation was carried to the effect that the medical care of cases of measles and whooping-cough should remain in the hands of general practitioners, and that the British Medical Association and medical defence societies be urged to take the necessary steps to secure that result.

Reinstatement of Persons Removed from Lists by Enlistment.—As the result of a conference between representatives of the Insurance and Panel Committees and consultation with the approved societies with regard to the reinstatement in practitioners' lists of insured persons whose names have been removed therefrom on account of enlistment, a scheme was propounded, and approved by the Panel Committee, providing that the doctors on the panel should be advised to refrain from making the

physical condition of such a patient a ground for exercising their option of rejection on his return to civil life.

HERTFORDSHIRE.

At a meeting of the Panel Committee on December 22nd, 1915, it was decided not to contribute towards the cost of the proposed scheme for pricing and checking prescriptions, as the statistical data would under the new arrangements for 1916 be received by the Panel Committee free of charge.

The Insurance Committee having refused to allow the continued use of the term "Rep. mist." under restrictions suggested, it was decided to refer the matter to the Commissioners, and to take every effort to preserve the use of the term.

EAST SUSSEX.

At a meeting of the Local Medical and Panel Committees on March 1st it was decided to represent to the Commissioners that the sums available for payment to Committees and practitioners should be increased during the period of increased prices of drugs and appliances, and that practitioners who supply such a portion of the patients on their lists should be authorized to do so to all.

The Committees approved additional fees in respect of mileage for every visit paid to a dependant suffering from tuberculosis.

OXFORD.

At a meeting of the Panel and Medical Committee on February 17th, surprise was expressed at the speeches of the secretary to the local Pharmaceutical Society on the "Aqua dest." question. It was decided to ask the Insurance Acts Committee of the British Medical Association to bring the matter before the Commissioners. It was reported that the secretary of the Panel Committee had been co-opted on the Local Medical War Committee to represent the panel.

BUCKINGHAMSHIRE.

At a meeting of the Buckinghamshire Local Medical and Panel Committee on February 25th it was decided to protest against the large deductions from the medical practitioners' fees and the very long time taken to settle up arrears of payments, inasmuch as those for 1914 were still unpaid. In a letter to the Clerk to the Buckinghamshire Insurance Committee forwarding the protest Dr. Larking, the secretary, enumerated eight reasons why the deductions were, in the opinion of the Committee, unjust and unreasonable.

GLOUCESTERSHIRE.

At a meeting of the Local Medical and Panel Committee on February 23rd it was reported that the general arrangement for the payment of deputies of doctors who have joined the R.A.M.C. is 1s. per attendance on panel patients and five-eighths of receipts from private patients in a dispensing practice. It was decided not to prepare a local formulary.

DERBYSHIRE.

At a meeting of the Panel Committee, on February 15th the opinion was expressed that a conference of Local Medical and Panel Committees should be held this year as there were urgent matters to discuss, including chronic cases resulting from the war and the signing of patients on to partnership lists.

It was reported that the Commissioners had stated that the abolition of the term "Rep. mist." by the Insurance Committee was out of order, and that a circular authorizing its use had been sent out. Owing to the refusal of the chemists to dispense the same, it was decided to ask the Commissioners to enforce their ruling by ordering the Clerk of the Insurance Committee to notify the chemists that they must make up such prescriptions. It was agreed to allow an additional dispensing fee of 3d. for prescriptions marked urgent by doctors, and dispensed between 8.30 p.m. and 8.30 a.m.

WEST RIDING OF YORKSHIRE.

At a meeting of the Local Medical and Panel Committee on February 11th the opinion was expressed that the removal of a Meibomian cyst from the eyelid was a service which can be properly undertaken by a general practitioner.

It was reported that the Commissioners had approved the continuance of the arrangements between the Insurance Committee and the chemists and doctors, which

provided that doctors should receive a flat rate of 6d. per prescription for emergency prescribing.

STAFFORDSHIRE.

THE Panel Committee has passed the following resolution:

It is the opinion of this committee that Panel and Local Medical Committees should have direct and immediate representation on the Central War Committee.

LANCASHIRE.

At a meeting of the County Local Medical Committee and Panel Committee on February 16th, as it appeared that the Panel Committee was not in agreement with the decision of the Insurance Committee that the use of the formula "Rep. mist." should be discontinued, it was decided to ask the Commissioners to deal with the matter, as provided under the regulations.

SHROPSHIRE.

At a meeting of the Panel Committee on March 7th it was resolved to ask the Insurance Committee to reconsider its refusal to sanction an arrangement whereby discharged soldiers were reinstated on the doctors' lists without the necessity of a fresh choice.

DURHAM COUNTY.

At a meeting of the Panel Committee on January 27th it was resolved that half the aggregate fees to be paid to the Committee by the Insurance Committee be divided amongst the practitioners attending patients of absent practitioners, and allotted to them according to the amount of work done. It was decided to request the Insurance Committee to agree to pay to practitioners an annual capitation fee at the rate of 2s. 6d. per hundred insured persons on their lists in respect of the supply of drugs and appliances under Clause 12 of the agreement between the Committee and practitioners.

RENFREW COUNTY.

At a meeting of the Panel Committee on January 26th it was decided not to make any contribution to the Central Bureau for 1916, and to recommend practitioners to accept the offer of the Insurance Committee of a rate of 5s. a head weekly for medical attendance on dependants of insured persons receiving domiciliary treatment for tuberculosis.

It was agreed that any insured person conscientiously stating a reasonable ground for seeking to be removed from the list of a practitioner on active service, but not actually absent from his practice, should be allowed to transfer.

It was decided to ask the Insurance Committee to continue, with regard to the year 1916 and until further notice, the arrangement whereby the whole of the practitioners' fund was divided among practitioners in proportion to the number of insured persons upon their lists at the commencement of each quarter.

DUNDEE.

At the annual general meeting of practitioners of Dundee and district on February 10th it was reported that the work of the Central Medical Office in connexion with the Emergency Medical Service had gone on smoothly. The number of visits paid to patients of doctors absent on military duty in the quarter ending December 31st, 1915, was 7,977, and of visits to patients of doctors absent through illness or on holiday 1,261. In the year 1915 35,830 visits were paid to patients at their own homes, and 25,842 patients were seen at the consulting-rooms. It was decided not to introduce morning consultation hours. It was agreed to send a letter of congratulation to Major Rogers on his obtaining the D.S.O.

INSURANCE NOTES.

ACTION AGAINST A GLASGOW PANEL DOCTOR.

A REMARKABLE action against a Glasgow panel doctor has been decided by the Sheriff Principal of Lanarkshire. It involved the question whether the doctor had been acting contrary to the provisions of the Insurance Act which forbid a panel practitioner, except under special conditions, to enter into any agreement to supply drugs or medicines to insured persons. It appears, according to the report in the *Medical World*, that Dr. Colvin, who had a large panel practice, had heard constant complaints from insured persons on his list that there were not sufficient panel chemists in the neighbourhood, and that his patients had often to wait unreasonably long before they could get his prescriptions dispensed. He there-

fore sold his own private dispensing practice to a Mr. Aylmer, a qualified pharmacist, whose name was placed on the panel of chemists, and who carried on the business in a shop over which Dr. Colvin had his consulting-rooms. After some time Mr. Aylmer left the country, arranging with his solicitor to pay all his debts out of a sum of money which was said to be owing to him from the Glasgow Insurance Committee for medicines supplied to insured persons. The Pharmaceutical Committee, however, lodged the objection that the business had never really belonged to Mr. Aylmer but to Dr. Colvin, and that this was a contravention of the dispensing provisions of the Insurance Act, and as a result of this the Insurance Committee refused to pay the amount claimed on behalf of Mr. Aylmer. As a consequence of this refusal some of Mr. Aylmer's creditors did not receive their accounts, and one of them, Mr. Taylor, claimed from Dr. Colvin the amount owing for drugs supplied to Mr. Aylmer. Dr. Colvin at once repudiated all liability, and on the matter coming before the Sheriff it was decided in his favour and he was allowed expenses, the Sheriff expressing his opinion that there had been a genuine transfer from Dr. Colvin to Mr. Aylmer, and that Dr. Colvin had not undertaken any responsibility for Mr. Aylmer's debts. Mr. Taylor was, however, not satisfied with this decision, and appealed against it to the Sheriff Principal, who again decided in favour of Dr. Colvin. Further appeal was still possible within a limited period, but apparently has not been lodged. Presumably the Insurance Committee will now be compelled to pay to the representatives of Mr. Aylmer the amount owing for medicines supplied to insured persons nearly three years ago. A remarkable point about the case is that one of the witnesses against Dr. Colvin was Mr. Rutherford Hill, the secretary for Scotland of the Standing Pharmaceutical Committee for National Insurance, who, though, according to the report before us, he admitted at the trial that he had had doubts all the time as to whether there had been a genuine transfer from Dr. Colvin to Mr. Aylmer, had granted a certificate to the Glasgow Insurance Committee that Mr. Aylmer had purchased Dr. Colvin's dispensing practice.

DRAFT REGULATIONS AFFECTING PANEL AND PHARMACEUTICAL COMMITTEES.

THE Insurance Commissioners have issued draft regulations, dated March 10th, for extending the period of office of the present members of the Panel and Pharmaceutical Committees in England and Wales. They provide that the term of office of the members of these committees "shall be extended to such date, not being more than twelve months after the termination of the present war, as the Insurance Commissioners may in each case determine." A proviso is, however, added that if, at any meeting held before June 1st, not less than one-third of the full number of members of a committee are in favour of an appeal to the panel doctors or chemists respectively, the committee shall, either by calling general meetings or by postal vote, ascertain the wishes of the doctors or chemists, and if the Commissioners are then satisfied that a majority of the practitioners or chemists, as the case may be, are not in favour of the term of office of the respective committees being extended, the Commissioners may then declare that the above provision for extending the term of office shall not apply to that committee.

REPEAT PRESCRIPTIONS IN THE LANCASHIRE COUNTY INSURANCE AREA.

IN accordance with a resolution of the Lancashire Insurance Committee a circular has just been issued to all panel practitioners in the county area giving the requisite fourteen days' notice that on and after March 10th no further orders for drugs or appliances must be given in such a form as to necessitate reference on the part of persons supplying the drugs or appliances to a previous order. At the meeting of the committee at which the resolution was carried, it was argued that repeat prescriptions prevented the free choice of chemist which the Insurance Act intended, and an amendment was proposed by Dr. Oldham, representing the Panel Committee, that the use of the term "Rep. mist." be continued provided that in any case of difficulty or at the reasonable request of the patient the prescription should be written in full. This, it was contended, would at any rate to a great extent have got over the difficulty that the use of the term compels the patient to go to the same chemist who first dispensed the prescription. The amendment was, however, lost by a considerable majority, and the effect of the notice just issued is that the term "Rep. mist." cannot be used after March 10th.

RECRUITING OF PANEL CHEMISTS.

THE Insurance Commission (England) has issued a memorandum (222/L.C.) to Insurance Committees pointing out that the position of panel chemists under the Military Service Act differs from that under the Derby scheme. "Chemist, in the sense of a person dispensing medicines under the National Insurance Acts," was a reserved occupation in List D issued by the Local Government Board in November, 1915. Chemists to whom the Military Service Act applies, as distinct from chemists who have attested, will be called up automatically unless application is made to the local tribunal for a certificate of exemption. An application by a person in a reserved, or, as it is now termed, a "certified," occupation for a certificate of exemption in virtue of his occupation, may be opposed by the military representative attending the local tribunal, on the ground that it is unnecessary that the person in question, though engaged in a certified occupation, should be retained in civil employment. The decision of the local tribunal is subject

to the right of appeal in the ordinary course. The memorandum advises each Insurance Committee to appoint a subcommittee to consider whether, having regard to the proper administration of medical benefit, it may be incumbent on the Committee to support applications for exemption. Having regard to the fact that every chemist has the right to place his name on the panel, the Commissioners do not suggest that the maintenance of an adequate supply of drugs and appliances for insured persons necessarily implies the retention in all cases of the services of every individual contractor, and point out that if the Committee is satisfied that the contractor is no longer able to carry on his business the Committee can, under the proviso to Article 19 (2) of the Medical Benefit Regulations, release him from his agreement.

Association Notices.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, April 26th, in the Council Room, 429, Strand, London, W.C. The hour will be notified later.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

March 23rd, 1916.

LANCASHIRE AND CHESHIRE BRANCH:

WARRINGTON DIVISION.

At the annual meeting of the Warrington Division held at the Warrington Infirmary on March 17th, the following officers were elected:—*Chairman*, Dr. Ferguson; *Vice-Chairman*, Dr. Naden, J.P.; *Branch Council Representative*, Dr. Bowden; *Honorary Secretary and Treasurer*, T. A. Murray; *Executive Committee*, Drs. Langdale, Bennett, and Binns, and the above officers. Votes of thanks were accorded to the retiring officers.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeons A. X. Laverne to the *Vivid*, additional, for disposal; W. H. Pope to the *Vivid*, additional. Staff Surgeon W. E. Gribbell to the Hospital Yacht *Liberty* in medical charge, vice Elder. Surgeons J. H. Wright and T. C. Patterson, M.B., to the *Vivid*, additional, for disposal; J. H. Burdett to the *Victory*, additional, for disposal; J. Duffin, M.B., to the *Thunderer*; temporary Surgeon A. C. Ballance, M.B., to the *Pembroke*, additional. To be temporary Surgeon: G. S. Mitchell.

ROYAL NAVAL VOLUNTEER RESERVE.

Acting Staff Surgeon A. G. V. Elder to the *Pembroke*, additional. Surgeon J. B. Ronaldson, M.B., to R.M. Division, Plymouth, vice Warburton. Surgeon Probationers S. Acheson to the *Laverock*, H. Paul to the *Christopher*.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel J. W. Barrett, late Australian A.M.C., to be temporary Lieutenant-Colonel.

Major (temporary Lieutenant-Colonel) C. H. Straton to retain his temporary rank whilst in command of a field ambulance.

Majors to be temporary Lieutenant-Colonels whilst commanding field ambulances: E. B. Knox, M.D., H. B. Connell, H. Stewart, M.B.

Majors to be temporary Lieutenant-Colonels whilst in command of a casualty clearing station: J. H. Brunsell, M.B., A. R. C. Parsons (substituted for notification published in the *London Gazette* of January 26th), R. H. L. Cordner, H. T. Wilson.

Major C. V. N. Lyne, retired pay, Indian Army, to be temporary Major.

J. Jenkins to be temporary Major whilst employed at the Hammer-smith Military Hospital.

Temporary Captain (temporary Major) A. N. Minns relinquishes the temporary rank of Major on ceasing to command a field ambulance.

R. E. Drake-Brockman to be temporary Captain (substituted for the notification published in the *London Gazette* of March 7th).

C. N. Binney, M.B., to be temporary Captain.

Temporary Lieutenants to be temporary Captains: F. Harris, M.B., R. C. Begg, M.B., D. Evans, M.B., J. B. Forde, M.B., H. T. Lukyn-Williams, M.B., S. B. Faulkner, M.B., H. W. Wilson, M.B., P. Ashe, C. F. Antonhies, H. W. Fox, F. Graveley, W. H. Anderson, J. E. O'Loghlin, G. J. Bowen, C. Hunter, D. S. Brough, M.B., A. Fraser, M.B., G. D. Cairns, M.B., A. P. Saint, B. B. Westlake, G. M. Jones, B. K. Vines, J. T. Hefferman, A. T. Cunningham, M.B., S. A. Montgomery, M.B., E. S. Hall, M.B., A. F. Readle, C. Sullivan, F.R.C.S.I., A. C. Turner, R. H. Tribe, R. M. Johnston, M.B., E. C. Dutton, M.B., F.R.C.S.E., W. H. Stott, A. J. W. Compton, M.B., F. C. Macaulay, M.B., E. W. Smerdon, M.D., F.R.C.S., A. H. Conder, F. P. Joscelyne, M.D., G. S. Deane, A. F. Rook, H. S. Sugars, M.B., F. G. Bell, M.D., F.R.C.S., F. O. Clarke, M.B., J. H. Tomlinson, R. L. Kitching, M.B., E. M. Townsend, J. Boyd, F.R.C.S.E.

Temporary Lieutenants relinquishing their commissions: D. Thomas, F.R.C.S., L. L. McKeever, F. P. Halliday, M.B., C. W. Brooks, M.B., A. E. Ellis, G. H. Alabaster, M.B., E. W. Moore, M.B., W. Fletcher, M.D., G. J. Adams, M.B., F.R.C.S.E., S. C. Tibbles, J. L. O. Tilley, F. C. Barlow.

Temporary honorary Lieutenant W. Burt relinquishes his commission on ceasing to be employed with the British Red Cross Hospital, Netley.

E. W. Twining is granted the temporary honorary rank of Lieutenant whilst serving with the British Red Cross Hospital, Netley.

Temporary Lieutenant B. F. Copland, M.B., is dismissed the service by sentence of a general court-martial.

To be temporary Lieutenants: J. M. Stalker, M.B., D. Crullin, P. Black, L. F. Hirst, M.D., G. W. Young, M.D., A. Sandison, M.B., R. C. Hewitt, J. C. O'Farrell, Lieutenant T. P. Buist, M.B. (from Unattached List, T.F.), W. E. Taylor, G. M. De Vine, M.B., H. Hannigan, M.B., J. W. Wayne, C. H. F. Bailey, A. H. Corley, temporary honorary Lieutenants E. G. Dingley, P. H. Wells, Lieutenant E. Reavley, M.D., Canadian A.M.C.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Captain H. G. Trayer, M.B., to be temporary Major whilst commanding a field ambulance.

Captain P. B. Roth, M.B., relinquishes his commission on account of ill health.

Lieutenants to be Captains: A. R. Laurie, J. T. Scrogie, M.B., R. F. Walker, M.B., H. T. Chutfield, M.B., A. I. O. Mackenzie.

Temporary Lieutenant L. F. Mackenzie, from R.A.M.C., to be Lieutenant.

Lieutenant (on probation) F. H. Goss is confirmed in his rank.

Lieutenants (on probation) relinquishing their commissions: A. Duffus, T. C. Studley.

GENERAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenant D. V. M. Adams, M.B., to be Captain (substituted for notification published in the *London Gazette* of February 9th under the heading Army Medical Service, R.A.M.C.).

INDIAN MEDICAL SERVICE.

Lieutenant-Colonel C. G. Webster, F.R.C.S.E., and Major W. C. Long have been permitted to retire from the service.

Majors to be Lieutenant-Colonels: C. R. Bakke, K. V. Kukday, C. D. Dawes, T. H. Symons, H. J. Walton, M.D., F.R.C.S., H. Ainsworth, M.B., F.R.C.S., F. A. Smith, M.D., J. V. Cornwall, M.D.; A. Miller, M.B., F. A. L. Hammond, H. R. Brown, S. P. James, M.D., A. N. Fleming, M.B., F.R.C.S.E., P. Dee, M.B., F. O. Mell, M.B.

Captains to be Majors: W. F. Brayne, M.B., M. S. Irani, M.B., H. Watts, M.B., S. W. Jones (Brevet Major), W. T. McCowen, J. Anderson, M.B., E. A. Roberts, G. G. Hirst.

Major H. O. Brown, M.B., Assistant Director, Central Research Institute, Kasauli, was appointed temporarily Director of that Institute, from January 8th to 19th, 1916.

Captain J. Cunningham, M.D., is appointed to be Director, Central Research Institute, Kasauli, *sub. pro tempore* with effect from January 20th, 1916.

Officers of the retired list re-employed during the period of the war, with effect from November 27th, 1915: Lieutenant-Colonels J. G. Hulbert, M.B., and E. H. Sharman, and Majors M. Dick, M.B., and T. A. O. Langston.

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

Majors to be temporary Lieutenant-Colonels: J. E. Davey, P. G. Goldsmith.

To be temporary Majors: T. H. Macdonald, Major D. S. Mackay, from 27th Canadian Infantry Battalion; Captains S. A. Smith, D.S.O., C. K. Russell, G. B. Peat, L. W. MacNutt, J. G. Hunt, A. S. Donaldson, H. L. Jackson. To be temporary Captains: A. M. Yeates, M.D., M. A. Griffith, A. H. Hough, H. Bell, F. B. Day, E. N. W. Shillington, T. R. C. Hays-Hicks, R. H. Thomas, M.D., A. B. Robertson, R. D. Moyle, G. M. Ross, M.D., F. Harvey, A. H. Rolph, Lieutenants L. A. Le Boeuf, E. O. Beer, R. Braut, S. Traynor, G. Bouthellier. To be temporary Lieutenant: J. F. Sparrow. To be temporary honorary Lieutenants: T. A. Loughrey, A. W. Holmes, C. W. Reynolds.

SOUTH AFRICAN MEDICAL CORPS.

To be temporary Lieutenant-Colonels: P. G. Stock, M.B. (officer of Permanent Defence Force), A. B. Ward, M.B., G. H. Usmar, G. R. Thomson, M.B. To be temporary Majors: T. L. Sandes, M.D., R. N. Pringle, M.B., C. M. Murray, M.B., E. A. St. Leger, M.B., H. C. Baker, E. F. B. Wilson, M.B., E. N. Thornton, M. S. Power, J. C. A. Rigby, M.B., M. G. Pearson, M.B. To be temporary Captains: W. L. Gordon, M.D., H. R. Lawrence, M.D., R. Liebson, J. Granger, M.B., A. G. Forbes, M.B., G. J. Jonbert, T. Welsh, F.R.C.S., C. M. N. May, M. B. Lawrie, M.B., P. J. Monaghan, M.B., I. W. Brehner, M.B., E. B. Brooke, M.B., E. D. Parker, M.B., H. E. H. Oakley, M.B., A. R. Friell, M.D., F.R.C.S., W. Thomas, M.B., A. S. Wilson, M.B., J. Drummond, M.B., E. W. Dyer, M.B., F.R.C.S., G. H. Coke, H. R. Mullins.

BRITISH WEST INDIES REGIMENT.

Major W. D. Neish to be Surgeon-Captain.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London Field Ambulance.—The appointment of M. J. Hackett as Lieutenant, announced in the *London Gazette* of March 2nd, is cancelled.

London General Hospital.—Lieutenants to be Captains: D. N. Hardeste, A. W. Bowie, M.B., L. A. Celestin, W. L. Holyoak, M.B., P. G. Doyno, W. J. T. Kimber, H. M. Harwood, H. A. Philpot, M.D.

London Sanitary Company.—Lieutenant T. J. Murray to be Captain.

Western General Hospital.—Lieutenants to be Captains: R. T. Jones and C. C. Boyle, M.B.

Wessex Casualty Clearing Station.—Lieutenant J. Fenton, M.B., from Attached to Units other than Medical Units, to be Lieutenant.

Wessex Field Ambulance.—Captain F. L. Dickson, M.B., relinquishes his commission on account of ill health.

Welsh Border Mounted Brigade Field Ambulance.—J. Durham-Reid to be Lieutenant.

South Midland Field Ambulance.—Captains H. N. Burroughes, M.B., from Attached to Units other than Medical Units, to be Captain.

North Midland Field Ambulance.—Captain (temporary Major) H. A. Howes, Lincolnshire Regiment, to be Major (temporary).

Northern General Hospital.—Major E. M. Sympton, M.D., to be Lieutenant-Colonel; Captain T. M. Allison, M.D., to be Major; Captain J. W. Heslop, from the T.F.R., to be Captain.

East Lancashire Casualty Clearing Station.—Lieutenant (temporary Captain) T. B. Wolstenholme, M.B., to be Captain.

East Lancashire Field Ambulance.—Major T. Holt, M.D., to be temporary Lieutenant-Colonel.

Lowland Field Ambulance.—Lieutenants to be Captains: H. T. Findlay, M.B., N. Scott, M.B., F.R.C.S.

Attached to Units other than Medical Units.—To be Captains: P. G. Williamson, M.B. (late Captain, Prince of Wales's Own, West Yorkshire Regiment); Lieutenants F. A. Pring, C. C. Ling, J. De V. Mather, M.D.

TERRITORIAL FORCE RESERVE.

ARMY MEDICAL SERVICE.

Colonel W. H. Bull, F.R.C.S.E., from Assistant Director of Medical Services, to be Colonel.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel A. L. Jones, from Welsh Field Ambulance, to be Lieutenant-Colonel. Captain H. G. Butterfield, M.D., from Attached to Units other than Medical Units, to be Captain.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM GENERAL DISPENSARY.—Resident Medical Officer. Salary, £250 per annum.

BOLTON INFIRMARY AND DISPENSARY.—Second and Third House-Surgeons. Salary, £200 and £180 respectively.

BOOTH BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £170 per annum.

BOURNEMOUTH: ROYAL VICTORIA AND WEST HANTS HOSPITAL.—Honorary Electro-Therapeutist.

BRISTOL GENERAL HOSPITAL.—(1) House-Physician; (2) Casualty House-Surgeon. Salary, £175 per annum.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—(1) House-Surgeon; (2) House-Physician. Salary, £150 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—Two House-Surgeons. Salary, £140 per annum.

CHARING CROSS HOSPITAL, W.C.—(1) Resident Medical Officer; (2) Medical Registrar.

DUDLEY: GUEST HOSPITAL.—Senior Resident Medical Officer. Salary, £150 per annum.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.

HASTINGS: EAST SUSSEX HOSPITAL.—Honorary Assistant Surgeon.

KIRKWALL: PARISH OF EDAY.—Medical Officer.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LISCARD: VICTORIA CENTRAL HOSPITAL.—House-Surgeon. Salary, £250 to £300.

LIVERPOOL: DAVID LEWIS NORTHERN HOSPITAL.—(1) House-Physician; (2) Two House-Surgeons. Salary, £150 per annum.

LIVERPOOL INFIRMARY FOR CHILDREN.—(1) Resident House-Physician; (2) Resident House-Surgeon. Salary, £30 for six months.

LONDON HOMOEOPATHIC HOSPITAL, Great Ormond Street, W.C.—(1) House-Surgeon; (2) Two Resident Medical Officers. Salary for (2), £80 per annum.

MANCHESTER CHILDREN'S HOSPITAL, Pendlebury.—Two Resident Medical Officers. Salary, £100 per annum and monthly bonus of £5 during the war.

NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—(1) Radiographer; honorarium £30 per annum. (2) Assistant Pathologist; salary, £100 per annum. (3) Senior Clinical Assistant in Out-patient Department.

NORTHAMPTON EDUCATION COMMITTEE.—Dental Surgeon. Salary, £250 per annum, rising to £300.

PORTSMOUTH PARISH.—First Assistant Medical Officer for the Workhouse, Infirmary and Children's Home (female). Salary, £180 per annum.

PUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Senior Resident House-Surgeon.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Out-patient Surgical Officer. Salary, £50 per annum.

ST. PANCRAS PARISH.—(1) Senior Assistant Medical Superintendent of the South Infirmary and Senior Assistant Medical Officer of the house adjacent; (2) Locumtenent. Salary, £7 7s. a week.

SALISBURY (GENERAL) INFIRMARY.—(1) House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

SHIFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SOUTH LONDON HOSPITAL FOR WOMEN.—(1) Assistant Physician; (2) Assistant Surgeon (females).

WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Junior House-Surgeon. Salary, £150 per annum.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BOLTON, S. J., L.R.C.P. and S.Edin., Certifying Factory Surgeon for the Aghadowey District, co. Londonderry.

CHALLANS, F., M.D., Medical Officer for Schools of the St. George in the East Parish.

EASTON, T. H., M.D.Edin., District Medical Officer of the Penistone Union.

FARR, C. C. J., M.R.C.S., L.R.C.P., District Medical Officer of the Downham Union.

FITZGIBBON, Michael, L.R.C.P. and S.I., Assistant Resident Medical Officer (pro tem) of the Limerick Lunatic Asylum.

GREY, H. M., M.R.C.S., L.R.C.P., Assistant Medical Officer of the South Infirmary, etc., of the St. Pancras Parish.

IRWIN, P. J., L.R.C.P. and S.I., Resident Medical Superintendent of the Limerick Lunatic Asylum, vice Dr. E. D. O'Neill.

LIDDELL, R. M., M.B., Ch.B.Edin., Certifying Factory Surgeon for the Wolston District, co. Warwick.

MCCARTHY, S., L.R.C.P. and S.Edin., District Medical Officer of the Merthyr Tydfil Union.

MORRIS, E. G. F., L.R.C.P.Edin., M.R.C.S.Eng., District Medical Officer of the Eastry Union.

MURPHY, P., M.B., temporary Dispensary Medical Officer for the Castlemary District of the Middleton Union.

O'CALLAGHAN, J. J., L.R.C.P. and S.Edin., Medical Officer for the Glencree Dispensary District, Macroom Union.

RICHARDSON, A. G., M.B., C.M.Edin., Medical Officer of the Rhyader Union Workhouse.

WADESON, E. A., M.B., B.C.Camb., Certifying Factory Surgeon for the Sedburgh District, co. Yorks.

WATSON, S. J., M.B., B.Ch., R.U.I., Certifying Factory Surgeon for the Abercraze District, co. Brecon.

WHITE, S. B., M.B., Ch.B.Oxon., Certifying Factory Surgeon for the Lyndhurst District, co. Hants.

WISE, A. T. Tucker, M.D., M.R.C.S., L.R.C.P., Swiss Diploma, Medical Superintendent of the Devon County Sanatorium at Hawkmoor.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

DAVEY.—On January 26th, at Kasu, P.O. Dowa, Nyasaland, the wife of J. B. Davey, M.B.Lond., D.T.M., M.R.C.S.Eng., L.R.C.P.Lond., Nyasaland Medical Service, of a daughter.

DE ZILWA.—On February 2nd, at Villa Mireille, Ward Place, Cinnamon Gardens, Colombo, Ceylon, the wife of Lucian de Zilwa, M.D., B.Sc.Lond., of a daughter.

DEATHS.

ANDERSON.—At a nursing home, Nottingham, after a short illness, Joseph Anderson, M.B., B.Ch., B.A.O., R.C.I., aged 27 years, youngest son of Mr. and Mrs. J. Anderson, Thorndale, Bangor, co. Down, formerly of Vicinage Park, Belfast.

FEIJC.—On March 20th, at Firlands, Burgess Hill, Sussex, Stamford FeiJC, M.R.C.P.E., M.R.C.S., late of Paddington, aged 80 years.

UNDERHILL.—On the 10th inst., at "Mountjoy," West Bromwich, Thomas Underhill, M.D., J.P., in his 93rd year.

DIARY FOR THE WEEK.

TUESDAY.

ROYAL SOCIETY OF MEDICINE: SECTION OF PSYCHIATRY, 8.30 p.m.—Dr. Bernard Hart: The Psychology of Rumour.

THURSDAY.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, 5 p.m.—First Lumenian Lecture, by Dr. F. E. Batten: Acute Poliomyelitis.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

CONFERENCES OF REPRESENTATIVES OF LOCAL MEDICAL WAR COMMITTEES.

BIRMINGHAM.

THE conference of representatives of the Local Medical War Committees in the Midlands and North Wales was held in the Midland Medical Institute, Birmingham, on March 23rd. The chair was taken by Dr. W. J. Garbutt, Chairman of the Birmingham Local Medical War Committee, and the arrangements were made by Dr. J. J. Bekenn, Honorary Secretary of the same Committee. There were about 100 present, including a number of Birmingham medical men of military age. Major Lucas, Mr. Bishop Harman, and Dr. Cox attended on behalf of the Central Medical War Committee. After a statement had been made on the general situation, questions were invited and answered.

The questions were very similar to those raised at the Leeds and London meetings, as reported in the SUPPLEMENT of March 25th. The representatives of the North Staffordshire Committee were anxious that the Central Medical War Committee should issue some general plan for dealing with the practices of men who had died on service. The example of Nottingham, which formulated such a scheme in September last, was mentioned, and the representatives of the Central Committee undertook that some model arrangement should be issued to local committees.

A suggestion was made that the Central Committee should contain representatives of provincial industrial practice. In reply it was pointed out that the Committee had no power to co-opt more members, and that any change in its composition must be dealt with at the next Representative Meeting.

The representative of Mid Staffordshire moved a resolution from that Committee urging that if enrolment were necessary the Government should make it compulsory. Other representatives declared that they had no mandate to vote on such a proposition, and the Chairman ruled it out of order.

Votes of thanks to the representatives of the Central Committee and the Chairman closed a very successful meeting.

BRISTOL.

THE conference of representatives of the Local Medical War Committees in the South-Western and Western Counties and in Central and South Wales was held at the University of Bristol on March 24th. The chair was taken by Dr. G. T. Miles, Chairman of the Bristol Local Medical War Committee, and Dr. H. F. Davis, Honorary Secretary of that Committee, was responsible for the arrangements. There were over thirty representatives present. Mr. T. Jenner Verrall, LL.D., Chairman, and Dr. Alfred Cox, one of the Secretaries of the Central Medical War Committee, attended on behalf of that Committee.

Dr. Verrall and Dr. Cox dealt with the reasons for the

adoption of the enrolment scheme and many of the general difficulties connected with it. Questions were then invited. Strong exception was taken from more than one area to the presence in Territorial hospitals of men of military age who had not undertaken the Imperial obligation. Dr. Verrall pointed out that the Central Committee had been definitely and officially informed that all medical men of military age holding Territorial commissions would be asked either to sign the obligation or resign. He undertook that inquiries would be made as to the cases raised at the meeting.

The Swansea representatives stated that the action of certain medical men who had attested and had been exempted or granted postponement by the local tribunal had had a very bad effect on the work of their committee, so much so that they had resolved not to press for enrolment. They declared that the military representative at the tribunal had taken no action to prevent medical men from being exempted—rather the reverse.

Representatives from Glamorgan and from Somersetshire stated that the action of the local Insurance Committees in placing unnecessary difficulties in the way of men who desired to offer for military service made it doubtful whether any more men could be got from those areas. Dr. Verrall asked that such cases should be reported fully to the Central Committee, which would place them before the Commissioners, who up to now had shown every disposition to facilitate panel practitioners going on military service.

The North Glamorgan representative said he saw no better plan for satisfying the medical needs of the army than the enrolment scheme which, if a success, would redound to the credit of the profession. He urged those present to put all their energies into it.

Votes of thanks were passed to Dr. Verrall, Dr. Cox, and the Chairman of the meeting.

APPLICATIONS FOR ENROLMENT.

Applications for enrolment should be addressed, if the applicant is resident in England or Wales, to the Secretaries of the Central Medical War Committee, 429, Strand, London, W.C.; if resident in Scotland, to the Secretary of the Scottish Medical Service Emergency Committee, Royal College of Physicians, Edinburgh; or, if resident in Ireland, to the Secretary of the Irish Medical War Committee, c/o British Medical Association, 16, South Frederick Street, Dublin.

NEED FOR RESIDENT SURGICAL OFFICERS AT HOSPITALS.

THE Central Medical War Committee invites applications from gentlemen of good hospital surgical experience, who, being over age or otherwise disqualified for service in the R.A.M.C., would yet be willing, if the necessity arose, to take appointments as resident surgical officers in hospitals. This appeal is not intended to interfere with the ordinary announcements of vacancies for such posts, but the Central Medical War Committee would like to have in reserve a supply of experienced surgeons who would, if necessary, be prepared to fill such appointments for a time. Applications should be sent to the Secretaries, Central Medical War Committee, 429, Strand, London, W.C.

Association Intelligence.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, April 26th, in the Council Room, 429, Strand, London, W.C. The hour will be notified later.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

March 23rd, 1916.

METROPOLITAN COUNTIES BRANCH.

In the London County Council (General Powers) Act, 1915 (Part V), an "establishment for massage or special treatment" is defined as meaning any premises in the county of London used or represented as being or intended to be used for the reception or treatment of persons requiring massage, manicure, chiropody, light, electric, vapour or other baths, or other similar treatment.

The Act provides that on and after February 1st, 1916, no person shall carry on in the county of London an establishment for massage or special treatment unless the name of such person and the premises used or represented as being or intended to be used for the purpose of such establishment are registered with the Council, or, in the case of an establishment in the City of London, with the Corporation.

Duly recognized hospitals established by the public authority or subsidized by recognized hospital funds are exempt.

Doctors are said to be exempt. The clause reads as follows:

An establishment for massage or special treatment carried on by a duly qualified medical practitioner, subject to the Council being furnished with a certificate, in a form approved by the Council, signed by two duly qualified medical practitioners practising or residing in the County of London, not being in partnership with such first-mentioned medical practitioner or with each other, and not having any financial or other interest in such establishment, to the effect (1) that such establishment is not and will not be used for any immoral purpose, and (2) that the medical practitioner carrying on the establishment is a fit and proper person to do so.

Such certificates are valid only for 12 months expiring on 31st January in any year, and only in respect of the person or premises specified therein.

The matter has been under the consideration of the Metropolitan Counties Branch Council, and the following resolutions have been passed:

- That the requirement of the Act, that in order to escape registration a duly qualified medical practitioner shall be required to furnish two certificates that an establishment for which he is responsible "is not and will not be used for an immoral purpose," is derogatory to the medical profession.
- That in the opinion of the council the terms of the Act relating to medical practitioners are so widely drawn that the house of no medical practitioner can be considered wholly safe from the necessity for certification or from inspection under the Act.

INSURANCE.

REPEAT PRESCRIPTIONS.

The Insurance Commissioners, recognizing that the abnormal circumstances of the war as affecting the conditions of practice of practitioners on the panel cannot properly be ignored in arriving at conclusions which will take immediate effect, have determined under Article 11 of the Amending Medical Benefit Regulations, 1915, as follows:

That during the period of the war and until the expiration of a period of three months from the conclusion of peace, the practice of issuing repeat prescriptions may be permitted on the following conditions:

- No "repeat" prescriptions to be given in any calendar month by reference to a prescription given prior to the first of that month.
- No "repeat" prescription to be given by reference to an order containing more than one prescription.
- No order for a "repeat" to be given which in any respect modifies the formula of the original prescription, and no additional prescription to be given on any such order.

4. The doctor to give the prescription in full if the patient so requests.

5. Every "repeat" order to indicate clearly the date of the order for the prescription which is to be repeated.

INSURANCE COMMITTEES.

LONDON.

At the meeting of the London Insurance Committee on March 23rd a scheme for the reinstatement of persons removed from the lists by enlistment approved by the Panel Committee on March 21st was agreed to and forwarded to the Insurance Commissioners.

The name of a panel practitioner of German nationality who returned to Germany last July, and for whom a deputy had since been acting, was removed from the medical list, the Commissioners having stated that it appeared to them that he should be regarded as having ceased to practise. Moneys due under this contract would be retained.

LOCAL MEDICAL AND PANEL COMMITTEES.

FIFE.

At a meeting of the Panel Committee on February 18th it was decided to protest to the Insurance Commissioners against the small credit allowed in respect of medical benefit for the county, and against the general reduction of 30 per cent. in respect of enlistments from the lists of every practitioner without respect of the constitution of individual panel lists as regards males and females. It was decided to support the Insurance Acts Committee of the British Medical Association in proposing that representations should be made by the British Medical Association to the Insurance Commissioners in favour of Panel Committees being allowed, when they so desired, to pay the travelling expenses of members out of the statutory grant for Medical Benefit Funds.

RENFREWSHIRE.

At a meeting of the Panel Committee on February 23rd it was decided to inform the British Medical Association that the Committee was in favour of procuring power to Panel Committees to pay the travelling expenses of their members out of the statutory grant from the medical benefit funds.

It was reported that the total cost for 1915 of the Central Checking Bureau was £3,156, and that the proportion of this amount falling to be paid by the county was £75. The Commissioners had made a deduction in favour of Renfrew because the Insurance Committee had in April, 1915, issued a circular to practitioners requesting them to write one prescription only on each prescription form, whereas other Insurance Committees had not made any such recommendation.

COUNTY TYRONE.

At a largely attended meeting of the County Tyrone Medical Committee, held at Omagh on March 16th, Dr. E. C. THOMPSON, who was in the chair, was congratulated on his return from the front. Resolutions were passed unanimously to the effect that the County and Borough Medical Committees, with the Irish Medical Committee, should have the right of recommending the appointment of medical referees in their different districts subject to the approval of the Insurance Commissioners, and condemning the action of the Council of the Irish Medical Association in admitting to the membership of that association a former medical adviser. We understand that the objection is to such an election by the Irish Medical Association pending the appointment of medical referees.

WEXFORD.

At a meeting in Wexford on March 1st of the medical practitioners of the county when Dr. T. J. KELLY was in the chair, the Honorary Secretary was directed to bring before the Insurance Commissioners, through the Irish Medical Committee, the difficulty medical certifiers experience in obtaining from insured persons their society number. The Irish Medical Committee was also requested to urge the Commissioners to limit the number of certificates as much as possible, as medical men found it a hardship and expense to be obliged to travel long distances in rural areas to give weekly certificates to patients suffering from chronic long illnesses.

A resolution was adopted expressing surprise and dis-appointment at the small superannuation allowance voted to Dr. Thomas J. Kelly after his long service of forty years, and asking the board of guardians (Enniscorthy) to grant him the full allowance to which his salary and emoluments entitled him.

MILITARY CENSUS OF SCOTTISH CHEMISTS.

CHEMISTS who were engaged in dispensing under the Insurance Act were originally included in the list of reserved occupations. In consequence of the decision that an attested man is liable to serve if the military representative of the district is of opinion that his services are not essential to the needs of the civil population, subject, of course, to the right of appeal to the tribunals, a census of the dispensing staffs of all chemists and druggists in Scotland, whether panel or non-panel, is being taken. When completed a meeting of representatives of the fifty-six committees dealing with insurance in Scotland and of the local Insurance Committee will be held with the military authorities in each area, in order to fix the number of chemists required to attend to the needs of the community.

MATERNITY BENEFIT.

In the House of Commons on March 22nd Mr. Charles Roberts said that to increase the maternity benefit payable under the Insurance Act from 30s. to £5 would require legislation. He invited Mr. Byrne to communicate to him the reasons on which the suggestion was based.

CORRESPONDENCE.

SURCHARGES.

DR. ALEX. G. FRASER (Manchester) writes: The following is an abbreviated statement of remarks I made at a meeting of the Manchester Panel Committee last Thursday, and which I have sent also for their consideration to the National Insurance Commissioners in London. They refer to the inadequate treatment we are able to give to our patients. In the following figures I am giving my own case only as illustrative.

Within the last eighteen months every quarter surcharges have been made, or moneys held back. The following are the particulars:

February 26th, 1915, £29 15s. cheque received; £1 5s. kept back, since paid.
March 27th, 1915, £30 13s. cheque; £1 kept back.
August 27th, 1915, £19 6s. cheque; £5 9s. 5d. surcharged.
September 20th, 1915, £16 5s. cheque; £1 10s. surcharged.
February 15th, 1916, £17 3s. cheque; 11s. surcharged.

The ground on which these surcharges have been made is that the average value of my prescription has been larger than the average of Manchester, thus:

	For Manchester.	Mine.
Average cost per script ...	5.104	6.417
Average number of scripts per patient ...	3.452	3.909
Average monthly cost per patient ...	1/5.622	2/1.08

I do not know how these figures are arrived at, nor am I able to verify them, but I presume they are correct. After deducting the dispensing charge, which is usually 2d., this leaves the net charge for drugs for Manchester 3.104d. and mine 4.417d. Because my average is 1.313d. higher than Manchester I am surcharged as above £5 9s. 5d. for the March quarter, besides the other surcharges. I refuse to believe that any competent judge will think that drugs prescribed to the value of 4.417d. can be considered over-prescribing or ought to be surcharged.

Let me take illustrations of what follows with such limitations, and they are of daily occurrence:

1. A poor girl came to my surgery this week suffering from rheumatism. She wanted cotton-wool for her chest and needed medicine. I said to her I was not able to give her both. She asked me to give her the wool and she would get the medicine.

2. The next night another girl called with a medical card transferring her from the Manchester to the county area. My heart leapt with pleasure, for I had never had any trouble with the Lancashire Insurance Committee and I felt I could give her reasonable treatment.

3. A chemist's assistant came in and casually remarked he had just dispensed for an adult suffering from acute dyspepsia a prescription, the Manchester stock bismuth mixture, but only half strength, 3j (instead of 3ij), diluted to 3viij of water, and the dose two teaspoonfuls three times a day. The young man remarked he did not see what good it would do.

These illustrations speak for themselves. It is true that we may order anything, but if the value of the script is over the average we are surcharged. My heaviest surcharge was for the March quarter, 1915, including January, February, and March, but it was not sent in till August; when then I looked back on my day book and read the diseases that had been treated—pneumonia, rheumatism, apoplexy, Graves's disease, etc.—and, reading between the lines, remembered how much treatment was unrecorded, feelings of a very mixed nature of anger and pity and shame came over me, to find myself, like many men, thus penalized in trying to do my duty.

CLERICAL WORK AND WAR WORK.

DR. T. M. CALLENDER (Sidcup) writes: When our country is requiring the aid of so many civil practitioners for the army surely something should be done during this time of severe

strain on the medical profession to lessen the clerical work connected with National Insurance. What is the good of keeping a "card" for each of the insured patients when the time occupied in filling up these cards might be much better employed, not to mention also the cost to the country of producing and tabulating these cards? The important illnesses are those which incapacitate the individual for work, and information with regard to these illnesses (as stated on the certificates) could be obtained, if necessary, from the approved societies. Economy might also be practised if it were only necessary to grant two certificates, one for "going on" and one for "going off" the insurance. A medical man requires some rest, physical and mental, but when he has to run the practices of several of his fellow-practitioners, as many of the profession are doing all over the country at present, it is well-nigh impossible for him to find time to fill in all these "cards" and obtain any mental rest or relaxation.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Surgeons H. E. Scargill to the *Vivid*; L. Moss, M.B., to Gibraltar Hospital, vice Babbington; F. J. D. Twigg, M.B., to the *Victory*, additional for disposal. Temporary Surgeons F. L. Duckworth to the *Bellerophon*; H. P. S. McClintock to the *President*; H. Parry-Price to the *Victory* additional for disposal.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon-Probationer A. C. F. Barrow to Haslar Hospital. To be Surgeon Probationers: W. A. Gray, J. Reid, A. P. Robb, H. G. Taylor, J. M. M. Wright, J. C. Blake, E. G. Adams, J. S. Durward.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Major Robert Jones, F.R.C.S.E., R.A.M.C.(T.F.), to be temporary Lieutenant-Colonel.

Major E. Ryan to be temporary Lieutenant-Colonel whilst in command of a casualty clearing station.

Majors to be temporary Lieutenant-Colonels whilst in command of field ambulances: G. H. J. Brown, M.B., D.S.O., E. G. Anthonisz, E. M. Ponnetfather, temporary Major C. E. Ligertwood.

Major J. Powell, M.B., is restored to the establishment. Captains to be temporary Majors whilst in command of field ambulances: A. G. Wells, W. G. Wright, F. Worthington, M.B., D.S.O., P. S. Stewart, M.B.

G. D. Gray, M.D., to be temporary Major.

Captain E. W. H. Groves, M.D., F.R.C.S., R.A.M.C.(T.F.), to be temporary Major.

Captain A. F. C. Martyn is seconded for service with the Egyptian army.

Temporary Lieutenants to be temporary Captains: E. G. Wheat, M.D., G. R. E. Colquhoun.

Superintendence Captain B. Gale, M.B., is restored to the establishment.

E. W. Skinner, M.D., to be temporary Captain.

The promotion to the rank of temporary Captain of temporary Lieutenant G. Smith is cancelled, and he is dismissed the service by sentence of a general court-martial.

The name of temporary Lieutenant Malcolm Manson, M.B., is as now described and not as in the *London Gazette* of June 21st, 1915.

To be temporary Lieutenants: C. L. Forde, M.B., P. A. McCallum, M.B., T. R. Davey, C. Costello, M.B., A. A. Scott, M.B., W. Scott, W. H. Seady, E. Nuttall, J. K. Bell, J. Cathcart, M.B., J. J. Dowdall, M.B., W. H. Thomas, W. J. Murphy, J. C. Anderson, M.B., R. C. Corbett, M.B., W. G. Thomas, E. H. Morley, M.B., J. F. Nicholson, M.D., E. B. Gorst, M.B., D. A. Crow, M.B., G. L. Lawlor, J. B. Fairclough, B. A. McClintock, M.D., A. H. Arnott, M.B., F. C. Couran, A. C. Lambert, M.D., R. E. McLaren, M.D., I. O'Keefe, M.B., E. O. Lindsey, R. V. Murphy, D. P. Thomas, A. G. Alexander, M.D., W. G. Harnett, M.D., A. J. Chillingworth, H. M. Harrison, B. A. Quinn, M.B., J. I. Enright, M.B., C. E. G. Bateman, J. G. T. Thomas, B. S. Simmonds, M.B., D. S. Graham, A. A. E. Newth, M.B., J. R. Wylie, M.B., H. W. Harding, M.D., J. Young, G. C. B. Hawes, A. E. Foerster, C. W. Morrison, M.B., W. J. Porteous, M.B., J. S. Annandale, M.B., A. J. D. Rowan, M.B., A. Morgan, W. G. Weston, M.B., J. St. J. Dundon, M.B., C. B. Howard, M.D., J. T. H. Madill, M.B., N. J. Judah, M.B., J. B. Yelf, J. F. Mackenzie, M.B., J. E. Manlove, C. O'Malley, M.B., S. C. W. Ireland, G. B. Mason, C. Townshend, M.D.

Temporary Lieutenants relinquish their commissions: O. Barton, M.B., N. Keith, M.B., J. A. Thoms, M.B., W. K. Hall, M.D., F. S. Pope, M.D.

Temporary Lieutenant E. N. Drier, M.D., F.R.C.S.E., relinquishes his commission on account of ill health.

Temporary honorary Lieutenants to be temporary Lieutenants: S. R. Prall, W. Thomas.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenants (on probation) confirmed in their rank: C. A. Slaughter, W. L. A. Harrison.

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

To be temporary honorary Majors: N. C. Wallace, C. J. Stewart, M.D., F. J. Ewing to be temporary Captain.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London (City of London) Field Ambulance.—Lieutenant A. H. Platt to be Captain.

London (City of London) General Hospital.—Lieutenant R. J. W. A. Cushing to be Captain.

London General Hospital.—Major J. Calvert, M.D., to be Lieutenant-Colonel. Major (temporary Colonel, A.M.S.) A. H. Tubby, M.D., F.R.C.S., to be Lieutenant-Colonel and remain seconded.

Captains to be Majors: F. W. Andrewes, M.D., F.R.S., F. F. Burghard, M.D., F.R.C.S. (and remain seconded), A. M. Gossage, M.B., H. F. Waterhouse, M.D., F.R.C.S.
London (City of London) Sanitary Company.—Lieutenants to be Captains: M. Greenwood, P. Hartley, E. R. Matthews.
London Sanitary Company.—To be Lieutenants: C. N. Atlee, A. E. Jury.
Home Counties Field Ambulance.—C. C. Robinson, M.B., to be Lieutenant.
Wessex Casualty Clearing Station.—Lieutenant T. J. Wright, F.R.C.S.E., to be Captain.
Wessex Field Ambulance.—Lieutenant E. H. Helby to be Captain.
Western General Hospital.—Lieutenants to be Captains: F. H. Lacey, M.B., J. T. Williams, M.D.
Welsh Border Mounted Brigade Field Ambulance.—Lieutenant W. Morgan resigns his commission.
Southern General Hospital.—To be Captains: Lieutenants K. H. Gill, M.B., G. L. Wilkinson.
Eastern General Hospital.—Lieutenant O. Inchley to be Captain.
Eastern Mounted Brigade Field Ambulance.—To be Lieutenants: E. H. Coyne, M.B., P. J. Smith, M.B.
East Anglian Field Ambulance.—Captain L. H. Hutchins relinquishes his commission on account of ill health. Captain G. C. Gray relinquishes his commission on account of ill health (substituted for announcement published in the *London Gazette* of March 7th).
South Midland Casualty Clearing Station.—To be Lieutenants: A. G. Banks, M.D., F.R.C.S.E., C. A. Reason, M.B.
South Midland Field Ambulance.—Lieutenants to be Captains: H. N. Crowe, M.D., W. J. F. Craig, J. Bannerman.
North Midland Field Ambulance.—Captain J. G. J. Green relinquishes his commission on appointment to the I.M.S.
North Midland Divisional Sanitary Section.—Lieutenant A. White, M.B., to be Captain.
East Lancashire Field Ambulance.—Major W. L. Bentley to be temporary Lieutenant-Colonel whilst in command of a field ambulance.
West Lancashire Divisional Sanitary Section.—Lieutenant A. Reid, from the London Sanitary Company, to be Lieutenant.
West Riding Field Ambulance.—Lieutenant C. H. Heppenstall, M.B., relinquishes his commission on appointment to the I.M.S.
Yorkshire Mounted Brigade Field Ambulance.—Captain A. H. Benson to be temporary Major whilst in command of a field ambulance.
Northern General Hospital.—Lieutenant H. W. Kerrigan, M.B., to be Captain.
Northumbrian Field Ambulance.—Lieutenant P. J. Sheedy to be Captain.
Lowland Field Ambulance.—Major M. Dunning, M.B., to be temporary Lieutenant-Colonel whilst in command of a field ambulance.
Highland Casualty Clearing Station.—Captain J. Dow, M.B., relinquishes his commission on appointment to the I.M.S.
Highland Field Ambulance.—G. Torrance, M.B., to be Lieutenant.
Highland Mounted Brigade Field Ambulance.—Captain A. Mowat, M.B., to be temporary Major whilst in command of a field ambulance.
Attached to Units other than Medical Units.—Major G. S. Mill, M.D., relinquishes his commission on account of ill health. To be Majors: Major W. M. Hamilton, M.D., from T.F.R., Captain D. E. Dickson, M.B. To be Captain: Lieutenant L. S. Wilcox, M.D. To be Lieutenants: H. Jaques, P. A. Chilcott.

TERRITORIAL FORCE RESERVE. ROYAL ARMY MEDICAL CORPS.

Major F. J. Warwick, M.B., from South Midland Field Ambulance, to be Major.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BRISTOL GENERAL HOSPITAL.—(1) House-Physician; (2) Casualty House-Surgeon. Salary, £175 per annum.
BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.
BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.
CHARING CROSS HOSPITAL.—Resident Medical Officer.
CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Second House-Surgeon. Salary, £150 per annum.
DUDLEY: GUEST HOSPITAL.—Senior Resident Medical Officer. Salary, £150 per annum.
DURHAM COUNTY HOSPITAL.—House-Surgeon. Salary, £150, and war bonus of £30 per annum.
EAST HAM EDUCATION COMMITTEE.—Temporary Assistant School Medical Officer. Salary, £300 per annum.
EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Senior House-Surgeon. Salary, £250 per annum.
GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.
KIRKWALL: PARISH OF EDAY.—Medical Officer.
LEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.
LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—Assistant House-Surgeon (non-resident). Honorarium, 120 guineas a year.
MANCHESTER CHILDREN'S HOSPITAL, Pendlebury.—Two Resident Medical Officers (females). Salary, £100 per annum and war bonus of £5 per month.
NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—(1) Radiographer; honorarium, £30 per annum. (2) Assistant Pathologist; salary, £100 per annum. (3) Senior Clinical Assistant in Out-patient Department.

NORTHAMPTON EDUCATION COMMITTEE.—Dental Surgeon. Salary, £250 per annum, rising to £300.

PUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeons. Salary, £100 per annum.

SALISBURY (GENERAL) INFIRMARY.—(1) House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—(1) House-Surgeon. (2) House-Physician (females). Salary, £200 per annum.

THROAT HOSPITAL, Golden Square, W.—Honorary Medical Registrar.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: East Grinstead (Sussex), Newport (Mayo).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

PRICE, C., M.R.C.S., L.R.C.P., Resident Medical Superintendent of the Children's Infirmary, Cleveland Street, W.

ROBERTS, H. S. W., L.R.C.P. and S. Edin., Certifying Factory Surgeon for the Ballindalloch District, co. Banff.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

MARRIAGES.

TEARE-ROBBINS.—On 25th March, at Christ Church, Friern Barnet, London, by the Rev. E. Dukes, John Teare, M.D., D.P.H., Lieutenant 1st London Sanitary Company, R.A.M.C.(T), Assistant to the C.M.O., West Riding County Council, elder son of John Teare, Esq., of "Kirk Royd," Wakefield, and Liverpool, to Lillian Maude, eldest daughter of the late Nicholas Robbins, Esq., of Penzance.

BENTLEY-SCOTT.—On March 28th, at St. Mary's, Kennington, Kent, Richard John Bentley, M.B., B.S. Lond., of Northend, Ashford, to Ida Mildred, eldest daughter of Major H. W. Scott, The Lancs. Fusiliers, of Temple House, Kennington.

DEATH.

HORN.—On March 22nd, at Glidencroft, St. Faith's, Robert James Horn, J.R.C.P., L.F.P.S., aged 60 years. Interred at St. Faith's on Saturday the 25th.

DIARY FOR THE WEEK,

TUESDAY.

RÖNTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Messrs. B. H. Morphy and B. R. Mullan: the Enclosed Tungsten Arc as a source of Ultra-Violet Light. Mr. E. Schall, B.Sc.: Experiments with a Coolidge Tube. And other papers.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF LARYNGOLOGY, 4 p.m.—Cases.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, 5 p.m.—Tuesday and Thursday: Lumenian Lectures by Dr. F. E. Batten: Acute Poliomyelitis.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammsmith, W.—Clinical work; graduates only.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

THE ENROLMENT SCHEME: WAR OFFICE STATEMENT AND APPEAL.

THE War Office has issued the following statement for publication:

In order to maintain the supply of medical officers required to meet the needs of the military services, it is urgently necessary, in the interests of the civil community no less than of our armies, that all qualified medical men not exceeding 45 years of age, irrespective of their circumstances, should without delay enter their names under the enrolment scheme which has been established by the Central Medical War Committee and has the authorization of the War Office.

The work of enrolment is carried out by three representative bodies of the medical profession, known as the Central Medical War Committee for England and Wales, the Scottish Medical Service Emergency Committee, and the Irish Medical War Committee. It should be understood that enrolment does not mean that the medical man is at once called up for service in the R.A.M.C.; he may never be called, and in any case will not be called up until the proper time has come for his services to be accepted. The real purpose of the scheme is to secure that those doctors are selected for military purposes who can best be spared at the particular date, and from the particular place, with due regard to the needs of the civil population, to the personal circumstances of the doctor, and to the requirements of the armies.

To carry out efficiently the comparative process necessary for an equitable distribution of the civil population, it is evident that all doctors of suitable age should have offered themselves for service quite irrespective of their particular circumstances, whatever these may be, so that a proper selection may be made by a body equipped with the requisite information from all parts of the country, and thus competent to make the necessary comparisons. The only alternatives are haphazard recruitment and arbitrary demand.

It is for these reasons that the War Office has officially recognized and now relies upon the Central Medical War Committee and the corresponding committees in Scotland and Ireland. These committees include representatives of the Royal Colleges of Physicians and the Royal Colleges of Surgeons, of the universities and medical schools, and of the British Medical Association, and have associated with themselves in their work representatives of the Government departments mainly concerned.

The committees have an organization of representative local committees in all parts of the three countries, from which they obtain local information and advice, and they work in daily contact with the various Government departments concerned.

Furthermore, for the purpose of considering and advising, through the Central Committee, on cases in England and Wales having such special features as exist, for instance, in regard to the staffs of the metropolitan hospitals, a Committee of Reference has, with the approval of the War

Office, been now established by the Royal College of Physicians of London and the Royal College of Surgeons of England, acting jointly.

Thus it will be seen that, in order to secure the desired result, that is to say, to obtain the medical officers needed for the army month by month, with the least possible interference with the needs of the civil population and the least possible injury to the individual practitioner, it is necessary that every medical man under the age of 45, who does not hold a certificate of enrolment (or of provisional acceptance by the War Office), should enrol at once. Only in this way can the exigencies of the situation be fairly and efficiently met.

MEDICAL WAR COMMITTEES.

ENGLAND AND WALES.

At its meeting on April 5th the Central Medical War Committee discussed the course it should take in view of the issue of the above official statement, and resolved as follows:

The Committee will not proceed to call up practitioners under the Enrolment Scheme unless and until 75 per cent. of those medical men in England and Wales who on January 5th, 1916, were of military age and not holding a commission have enrolled, or have since that date received a commission in His Majesty's forces or a letter of provisional acceptance. Military age for this purpose means under 45 years of age.

The Committee at this meeting also considered the question of forming a compassionate fund, and adopted a resolution expressing the opinion that it may be necessary to establish a compassionate fund in connexion with medical officers serving in the war. It asked the Council of the British Medical Association to consider the desirability of the formation of such a fund.

IRELAND.

A meeting of the Irish Medical War Committee was held at the Royal College of Physicians of Ireland on March 28th, when Dr. MacDowel Cosgrave, President of the Royal College of Physicians in Ireland, was in the chair, and the following members were present: Mr. F. Conway Dwyer, President of the Royal College of Surgeons of Ireland; Dr. D. J. Coffey, President University College; Alderman J. McWalter, R.A.M.C.; Colonel Hearn, R.A.M.C.; Dr. T. Hennessy, and Dr. M. R. J. Hayes, honorary secretary.

The Committee, having considered correspondence which passed between Sir Alfred Keogh, Director-General A.M.S., and its honorary secretary, Dr. Hayes, decided to circularize all available Irish doctors to join the R.A.M.C., as Sir Alfred Keogh definitely stated in his letter that there was an urgent need for doctors to join the R.A.M.C.

The secretary was directed to convey on behalf of the Irish Medical War Committee its sympathy to its colleague, Sir Thomas Stafford, Bt., medical representative of the Local Government Board, on the death of his wife.

APPLICATIONS FOR ENROLMENT.

Applications for enrolment should be addressed, if the applicant is resident in England or Wales, to the Secretaries of the Central Medical War Committee, 429, Strand,

London, W.C.; if resident in Scotland, to the Secretary of the Scottish Medical Service Emergency Committee, Royal College of Physicians, Edinburgh; or, if resident in Ireland, to the Secretary of the Irish Medical War Committee, c/o British Medical Association, 16, South Frederick Street, Dublin.

Association Intelligence.

MEETING OF COUNCIL.

THE next meeting of Council will be held on Wednesday, April 26th, in the Council Room, 429, Strand, London, W.C., at 11 a.m.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

March 23rd, 1916.

BRANCH AND DIVISION MEETINGS TO BE HELD.

YORKSHIRE BRANCH.—Dr. H. J. Campbell, Honorary Secretary (36, Manningham Lane, Bradford), gives notice that a meeting of the Branch will be held at the Royal Bath Hospital, Harrogate, on Saturday, April 8th, at 3 p.m.

INSURANCE.

CIVIL SERVICE ESTIMATES.

THE Estimates for Civil Services for the year ending March 31st, 1917, recently issued, show, in Class VII, dealing with National Insurance, old age pensions, labour exchanges, etc., an anticipated saving of nearly a million and a half pounds.

General Summary.

Service.	1916-7.	1915-16.	Increase.	Decrease
	£	£	£	£
Old age pensions ...	12,654,000	13,089,000		435,000
National Health Insurance:				
Joint Committee ...	208,709	618,275		409,566
English Commission ...	4,667,239	4,891,656		224,417
Welsh Commission ...	314,923	357,073		42,150
Scottish Commission ...	115,922	718,187		101,285
Irish Commission ...	393,475	491,370		97,895
Labour Exchanges and un-				
employment insurance	918,262	1,034,430		116,168
National Insurance audit				
department	104,000	118,440		14,440
Treatment of tuberculosis:				
special grants	425,000	385,000	40,000	
Highlands and Islands				
Medical service Board	44,135	44,015	120	
Friendly societies def-				
iciency	15,307	14,712	595	
Expenses under the Un-				
employed Workmen Act	—	50,000		50,000
Totals ...	20,361,952	21,812,158	40,715	1,490,921
Net decrease ...				£1,450,206.

The decrease in the estimate for old age pensions includes a saving of £2,000 on expenses of Pension Committees, but otherwise no explanation is given. Provision is also made in other estimates for expenditure in connexion with old age pensions to the extent of £447,563.

Perhaps the most noteworthy decrease is in the estimate for the Insurance Joint Committee, which is expected to require in the coming year roughly only about one-third of the grants of the past year. To begin with there is a saving of £2,500 in salaries and allowances. For the Special Drug Fund, which in the past year was £30,000, only £100 is put down for the coming year. This fund is for providing special grants towards the cost of drugs in case of epidemics or abnormal sickness. The grant for the Medical Research Fund is reduced from £56,500 to £50,000, and that for the expenses of members of Insurance Committees is reduced from £30,000 to £6,500. This last reduction is doubtless owing to the stringent regulations which the Commissioners have introduced as to the payments of subsistent allowance and for loss of remunerative time to members of Insurance Committees in attending

meetings of their committees. The grant-in-aid towards arrears of contributions is reduced from £100,000 to £100, and the grants towards the cost of sickness benefit for women is reduced from £150,000 to £100, while the special grants for sanatorium benefit are reduced from £50,000 to £35,000. The only items which show an increase are the mileage grants for Great Britain, including the Highlands and Islands of Scotland, which increase from £13,500 to £37,000, and the grant-in-aid for the administration of medical benefit, which is increased from £40,350 to £59,000.

In the estimates of expenditure of the English Commissioners there is a net decrease of £224,417, but only £3,217 of this decrease is in the Central Administration accounts. By far the greatest saving is in the grants in aid of sickness, disablement, and maternity benefits, which are reduced from £3,147,100 in 1915 to £1,949,400 for the coming year, a reduction of £1,197,700. There is a further saving of £189,200 in the grants towards the administrative expenses of approved societies and Insurance Committees. On the other hand, there is a large increase of £754,300 in the grants-in-aid of medical and sanatorium benefits, which are £1,035,200, against £280,900 in the past year. There is also a large increase of £447,900—that is, from £375,100 in 1915 to £823,000 for the coming year—for the special grants for medical benefit. As the cost of the pricing and checking of prescriptions under the new drug arrangements is included under this head, probably part of the increase may be due to this. Otherwise, this great increase is not explained, and indeed it is impossible to explain many of the increases and decreases without further information than is given in the Estimates.

Broadly speaking there are analogous increases and decreases in the accounts of the Welsh and Scottish Commissions, though it may be noted that under the English Commission there is an increase of £4,200 for salaries, wages, and allowances, largely due to additional clerks, and in spite of the fact that there is a saving of £2,000 as the salaries of two Commissioners who have not been replaced. On the other hand, there is a substantial decrease in the salaries and wages account for Wales and Scotland. In the Irish accounts the net decrease of £97,895 is largely due to the lessened grants-in-aid for sickness, disablement, and maternity benefits and administrative expenses of societies and committees. On the other hand, there is a noteworthy increase of £41,000, namely, from £100 in 1915 to £41,100 in 1916-17, for the expenses of medical certification.

The special grants for the treatment of tuberculosis show an increase of £40,000, namely, from £385,000 in 1915 to £425,000 for the coming year. These grants are for the cost of the extension of sanatorium benefit to the dependants of insured persons and for the treatment of tuberculosis generally, and the grant will be allocated between the four countries, being administered in England, Scotland, and Ireland by the respective Local Government Boards, and in Wales by the Welsh Insurance Commissioners.

PAYMENT OF ARREARS.

We have received several letters complaining that arrears of payments in respect of 1914 have not yet been paid. As long ago as, October 27th, 1915, the Chairman of the Joint Committee of Insurance Commissioners informed Sir Philip Magnus that the Commissioners were using their best endeavours to expedite the settlement by all the means within their power, but he could not bind himself down to a date, even approximately. In a letter addressed by the Commissioners to Insurance Committees on December 2nd, 1915, they said that they had been placed in a position to overcome the difficulties which had hitherto precluded them from completing the computation of the amount of the fund, and that it was proposed to proceed forthwith with a final settlement for 1914 upon the ordinary lines, thus enabling committees to make final payments to doctors of any balances outstanding under their agreements. We are informed that payments have already been made in many areas, and that where they have not the delay is now due to local administrative difficulties, and probably to shortage of labour. This, we are given to understand, is the case in London, where the Panel Committee at its last meeting resolved to make strong representations to the Commissioners expressing

the growing indignation of practitioners on the panel at the delay which has occurred in effecting the final settlement of practitioners' accounts for the medical year 1914. On the other hand, it was reported at a meeting of the Panel Committee for West Suffolk on March 14th that the clerk had money in hand to complete the settlement for 1914, but could not distribute it because the Commissioners, in spite of repeated applications, had failed to supply the necessary figures.

At a special meeting of the York Local Medical and Panel Committee on March 31st great dissatisfaction was expressed both with the very prolonged delay in the payment of the 1914 accounts throughout the country, and with the continued non-payment in York. It was pointed out that on a rough computation at least £1 per 1,000 patients would be permanently lost to the panel practitioners in the shape of interest on the money overdue (reckoning at 5 per cent. for one year only), and the honorary secretary was instructed to write to the Insurance Commissioners requesting an explanation.

REPEAT PRESCRIPTIONS.

We are requested by the Insurance Commissioners to state that the decision with regard to "repeat prescriptions" reported in the SUPPLEMENT to the JOURNAL of April 1st was given by them with reference to the circumstances of a particular case in which they were called upon to adjudicate, and is not a general decision of universal application to all areas. No question, in any event, arises for the Commissioners' decision under Article 11 of the amending Medical Benefit Regulations except where the Insurance and Panel Committees are in disagreement as to the "exceptions and qualifications, if any," to be recognized under the article; and any such question coming before the Commissioners for adjudication falls to be decided with particular reference to the circumstances of the area in which it has arisen.

Dr. M. S. HARTFORD (London, S.W.) writes:

I have never put the blame solely on the Commissioners for the petty act of tyranny abolishing the use of the term "Rep. mist." for I read, between the lines, that had the representatives of the Pharmaceutical Society held up their little fingers against the proposal no question of abolition would ever have arisen.

It is idle to talk of "free choice of chemist" as an absolute bar to using this term, for no panel practitioner would ever have any objection to rewrite the prescription in full should the patient wish to change his chemist. Further, what about the thousands of insured persons who receive their medicine at the dispensaries of those objectionable "approved institutions"? There, apparently, "Rep. mist." may be written as long as the medical officer desires.

Personally, no one has been more careful to avoid extravagant prescribing and not to encourage drugging than I have been, but I have all through continued to "repeat" my prescription if I thought fit; for I know from past experience that the majority of patients like to feel that they are having the same mixture if it seems to suit their diseases. The smallest change in the prescription, often made when it has to be rewritten, gives the practitioner trouble and frequently destroys the confidence of the patient in the efficacy of the treatment. Besides, to rewrite all prescriptions is against the interest of insured persons, for it may be laid down as an axiom that the greater the amount of clerical work the doctor has to do the less attention the patient receives. And the patients know this well, too.

In common with thousands of others, I have no wish to go back to the days of dispensing your own medicine, and I have, hitherto, been quite satisfied with the present arrangements. I cannot help thinking, however, that the chemists must be riding for a fall. But for my part, I had determined to continue to write "Rep. mist.", but I also decided that if its use had been altogether prohibited, in the near future I would appeal to those lay journals, which so generously gave me space in 1911 and 1912 to advocate and defend the Insurance scheme, to give me the hospitality of their columns to advocate, now, that the Insurance Committees should be empowered, either by regulations or by amending the Acts, to open dispensaries, or, failing this, that the grouped approved societies should have the same power. In the latter case I should have been interested to know what so clever and influential an insurance specialist as Mr. Handel Booth, M.P., thought of the advantages of that proposal, especially in view of the inevitable inclusion of the women and children in a future scheme.

Whilst alluding to clerical work, I could never agree with those who, like Dr. T. M. Callender in your last issue, aim at the abolition of record cards. These cards are wholly admirable and simple, and are certainly of the greatest assistance to every conscientious practitioner. To work any practice without keeping any record of cases must seem to be a most haphazard proceeding, and certainly those cards are simplicity itself.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Fleet Surgeons E. T. P. Eames to the *Queen*, E. G. B. O'Leary to the *Prince of Wales*, Staff Surgeons W. E. Ormsby, M.B., to the *Victory*, additional; F. J. Gowans, M.B., to the *Pembroke*, additional; H. A. Kellond-Knight to the *Vivid*, additional; L. M. Morris to the *Phaeton*; E. L. Atkinson to the *Pembroke*, additional, for Chatham Hospital, temporary; E. Wilkinson, M.B., to York South Hospital, vice Black. Surgeons M. H. Langford, D.S.O., to Chatham Hospital; J. P. Berry (reserve) to the *Victory*, additional, for disposal; M. E. Caldwell, M.B., to the *Vivid*, additional. Temporary Surgeons D. G. Falconer, M.B., to the *Thunderer*, vice Ormsby; M. H. de J. Harper, M.B., to the *Queen Mary*, vice Gowans; C. S. Ogilvy, to the *Marys*, vice Falconer; W. Taylor, M.B., to the *Britannia*, vice Ogilvy; A. M. Dunlop, M.B., to the *Inflexible*, vice Langford; E. T. Parry to the *Vivid*, additional; C. H. Browne to the *Forburgh*, vice Parry; W. K. Chalmers, M.B., to the *Victory*, additional, for disposal; E. J. Cooke to the *Victory*, additional, for Haslar Hospital; R. Creasy to the *Pembroke*, additional, for disposal; T. J. Thomas to the *Donegal*, vice Drummond.

ROYAL NAVAL VOLUNTEER RESERVE.

Staff Surgeon W. G. Bayras, M.D., to the *Vanguard*, vice Kellond-Knight. Surgeon-probationers W. E. M. Wardill to the *Forerunner*; A. D. Wall to the *Defender*; R. McNair to the *Druid*; E. D. T. Roberts to the *Sandfly*; W. G. Thompson to the *Jackal*; P. Bunbury to the *Tigeress*; R. N. Gibson to the *Beaver*; G. H. Fitzgerald to the *Attentive*; J. M. Ritchie to the *Sparrowhawk*. To be Surgeon-probationers: N. T. Williamson, A. B. Green, K. T. E. Wallington, S. R. Tattersall, A. C. Sleight, E. K. Macdonald, J. D. M. Cardell, N. J. Macdonald, H. Chadwick, E. B. Peirce, L. E. Kerr.

ARMY MEDICAL SERVICE.

Lieutenant-Colonel G. St. C. Thom, M.B., R.A.M.C., to be Deputy Assistant Director-General, vice Lieutenant-Colonel W. R. Blackwell.

ROYAL ARMY MEDICAL CORPS.

Major (temporary Lieutenant-Colonel) P. A. Lloyd-Jones, D.S.O., relinquishes his temporary rank on re-posting.

H. Chaffin, F.R.C.S., and W. Gennell, M.B., F.R.C.S., to be temporary honorary Major and temporary honorary captain respectively, whilst employed at the Red Cross Hospital, Bala-houston.

To be temporary honorary Majors: W. I. de C. Wheeler, M.D., F.R.C.S.I., temporary honorary Lieutenant L. J. Austin, M.D., F.R.C.S., whilst employed with the No. 2 British Red Cross Hospital.

Granted temporary rank whilst employed at the County of Middlesex War Hospital: As Lieutenant-Colonel: Temporary Major L. W. Rolleston, M.B., from the Napsbury War Hospital. As Major: Temporary Captain A. O'Neill, from the Napsbury War Hospital; L. S. T. Burrell, M.D. As Captain: H. T. B. Roberts, H. C. Halsted, M.D.

To be temporary Major: W. D. Andersen.

L. S. Kidd to be temporary honorary Captain whilst employed with the Australian Voluntary Hospital.

Temporary Captain - P. Bedson, M.D., from a service battalion, the Northumberland Fusiliers, to be temporary Lieutenant (substituted for notification published in the *London Gazette* of March 7th).

Temporary Captain A. S. Fry, M.B., relinquishes his commission on appointment to the I.M.S.

Temporary Captain C. H. Mills relinquishes his commission. E. C. Austin, F.R.C.S., to be temporary honorary Captain whilst employed at the Withington War Hospital, Manchester.

Temporary honorary Captain - W. Paterson to be temporary honorary Major whilst serving with the Australian Voluntary Hospital.

To be temporary Captains: A. S. Garden, M.B.; G. J. Arnold, F.R.C.S., late Captain R.A.M.C.(T.F.); Staff Surgeon G. H. Ross, M.B., retired list R.N.

Temporary Lieutenants to be temporary Captains: G. M. De Vine, M.B., D. E. Derry, M.B., E. L. Mansel, M.D., T. S. Hammond, F.R.C.S., J. Marmion, C. W. Donald, M.D., F.R.C.S.E., F. G. Milne, M.B., T. F. Griffin, M.D., D. Bird, G. N. Lorimer, M.B., W. J. Le-celles, M.B., A. G. MacLeod, M.B., E. A. O. Travers, P. Carney, M.B., W. Thomas, J. H. Askins, M.B., H. H. Elliot, M.B., J. Sullivan, M.B., H. L. C. Noel, G. S. Phillips, W. E. Robinson, M.B., H. N. M. Puckle, M.B., B. G. Clarke, M.B., A. T. Roberts, M.B., G. D. K. Waldron, M.B., J. L. M. Jamieson, M.B., W. E. Giblin, M.B., W. A. Edwards, M.B., L. J. J. Nye, M.B., P. E. Keane, M.B., O. H. Edwards, F. Irvine, M.B., W. Smithies, H. H. Davis, F.R.C.S.E., C. E. Sundell, M.D., J. R. Black, M.B., T. Sheehan, A. Wiley, F. S. Hawke, J. A. Hutchinson, F. H. Rudge, N. G. Horner, M.B., D. C. Taylor, M.B., F.R.C.S., W. W. Turner, M.B., W. M. O'Connor, M.B., H. B. Binks, M.B., A. H. Davidson, M.B., A. C. Freeth, M.B., M. L. Neylon, M. W. Steinberg, M.B., J. Hutchinson, M.D., G. Riddoch, M.B., V. J. McAllister, M.B., F.R.C.S.I., W. W. Thomson, M.B., A. T. Paterson, M.D., F.R.C.S.E., A. C. A. Jekyll, M.B., C. K. Cohen, M.B., E. P. Dark, M.B., E. V. Steele, M.B., S. E. Elphick, E. J. Eadie, R. B. Hunt, C. Stuart, M.D., M. A. Farr, H. Mathewson, M.B., J. W. Wood, J. S. Caldwell, M.B., W. Morrison, M.B., R. H. Scovell, M.B., O. H. Bowen.

Lieutenants of the Canadian A.M.C. to be temporary Lieutenants: D. E. H. Cleveland, M.D., J. B. Gai ban, M.B., F. H. Hurlbut, M.B., E. C. Smith, J. G. Lee, M. B. A. MacKenzie, M.B., M. D. Baker, M.B., D. T. Evans, M.B., G. A. Lamont, M.B.

To be temporary Lieutenants: E. C. Lindsey, J. Hewat, M.B., F. L. Gill, M.B., H. S. Gaskell, M.B., D. Morrison, M.B., P. J. Maguire, T. E. Hunter, E. J. Dermott, D. C. Suttle, M.B., G. F. Ford, W. J. McIvor, M.B., R. J. P. Waugh, M.B., W. Halliwell, M.B., B. P. Allinson, T. W. Mason, G. J. Knaggs, R. W. Chapman, M.B., A. Walker, M.B., W. J. Evans, J. A. H. Telfer, M.B., F. J. H. Bag, M.B., temporary honorary Lieutenant J. N. Deacon, M.B., T. P. Hutchinson, M.B., F. L. Power, H. Tipping, M.D., W. A. Shafto, M.D., A. Pimm, J. E. Harford, M.B., W. W. Watt, P. Pigdor, M.B., T. Perrin, M.D., F.R.C.S., F. L. Keith, M.B., H. A. Macdonald, M.B.

Temporary Lieutenants relinquish their commissions on account of ill health: C. G. Sherowitz, M.B., F. W. Lee.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London Field Ambulance.—Major W. G. Macfee, from Attached to Units other than Medical Units, to be Major.

Home Counties Casualty Clearing Station.—Captain R. W. Brimacombe to be temporary Major whilst in command of a casualty clearing station. Temporary honorary Lieutenant W. Burt, from the Red Cross Hospital, Netley, to be Lieutenant.

East Anlian Field Ambulance.—Lieutenant S. D. Graham, M.B., to Captain; Lieutenant R. J. R. Meerey is restored to the establishment.
South Midland Mounted Brigade Field Ambulance.—Lieutenant W. G. Rutherford to be Captain.
North Midland Field Ambulance.—Lieutenant T. E. A. Carr, M.B., to be Captain; Lieutenant (temporary Captain) G. Holmes, M.B., to be Captain.
Yorkshire Mounted Brigade Field Ambulance.—Lieutenant C. G. Meade to be Captain.
West Lancashire Casualty Clearing Station.—Captain A. P. H. Simpson, from West Lancashire Field Ambulance, to be Captain.
West Lancashire Field Ambulance.—Captain (temporary Major) A. P. H. Simpson relinquishes his temporary rank on alteration in posting.
Northumbrian Field Ambulance.—Lieutenants to be Captains: J. A. L. Magee, J. B. Sisson, M.B.
Lowland Field Ambulance.—Captain W. W. Green, M.D., F.R.C.S.E., to be temporary Major whilst in command of a field ambulance; Lieutenant W. Combe, M.B., to be Captain.
Highland Casualty Clearing Station.—F. G. Stuart, M.B., to be Lieutenant.
Scottish Horse Mounted Brigade Field Ambulance.—Major H. Richardson, M.D., to be temporary Lieutenant-Colonel whilst in command of a field ambulance.
Welsh Border Mounted Brigade Field Ambulance.—H. A. Higginson to be Lieutenant.
Attached to Units other than Medical Units.—Captains W. R. E. Williams and T. M. Morton to be Majors. Captain J. J. Marsh relinquishes his commission on account of ill health. Captain H. F. Everett to be temporary Major whilst in command of a field ambulance. Lieutenants E. H. Gonin, M.D., and J. D. Jones to be Captains. G. H. Gill to be Lieutenant.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Resident Surgeon.
BIRMINGHAM GENERAL DISPENSARY.—Resident Medical Officer for Branch. Salary, £250 per annum.
BRISTOL GENERAL HOSPITAL.—(1) House-Physician; (2) Casualty House-Surgeon. Salary, £175 per annum.
BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.
BURNLEY; VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.
BURY INFIRMARY.—Senior House-Surgeon. Salary, £250 per annum.
CAMBRIDGESHIRE ASYLUM, Fulbourn.—Junior Assistant Medical Officer. Salary, £200 per annum, rising to £250.
CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Second House-Surgeon. Salary, £150 per annum.
DONCASTER ROYAL INFIRMARY AND DISPENSARY.—House-Surgeon. Salary, £250 per annum.
DORSET COUNTY COUNCIL.—Lady Assistant Medical Officer of Health. Salary, £500 per annum.
DUDLEY; GUEST HOSPITAL.—Assistant House-Surgeon. Salary, £120 per annum.
EXETER; ROYAL DEVON AND EXETER HOSPITAL.—Senior House-Surgeon. Salary, £250 per annum.
HUDDERSFIELD ROYAL INFIRMARY.—Junior House-Surgeon. Salary, £100 per annum.
KING EDWARD MEMORIAL HOSPITAL, W.—Resident Medical Officer. Salary, £100 per annum.
LANCASTER; COUNTY ASYLUM.—Assistant Medical Officer (temporary). Salary, £6 6s. a week.
LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.
LONDON HOSPITAL, E.—Two vacancies on Assistant Obstetric Staff.
LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—Assistant House-Surgeon (non-resident). Honorarium, 120 guineas a year.
NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—(1) Senior Clinical Assistant in Out-patient Department; (2) Clinical Assistants; (3) Resident Medical Officer at House of Recovery, New Barnet, salary, £50 per annum.
PUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.
QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeons. Salary, £100 per annum.
ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—Male and Female House-Physicians and House-Surgeons. Salary, £50 per annum.
SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.
SHREWSBURY DISPENSARY.—Medical Officer.
SOUTHAMPTON; FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.
SHEFFIELD; JESSOP HOSPITAL FOR WOMEN.—Junior Lady House-Surgeon. Salary, £80 per annum.
STOKE-ON-TRENT; NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—(1) House-Surgeon. (2) House-Physician (females). Salary, £200 per annum.
SURREY COUNTY ASYLUM Brookwood.—Locumtenent Medical Officer. Salary, 6 guineas a week.
WARWICKSHIRE AND COVENTRY JOINT COMMITTEE FOR TUBERCULOSIS.—Resident Medical Officer for Bramcote Sanatorium, near Nuneaton. Salary, £250 per annum.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BEALES, T. W. L., L.R.C.P., M.R.C.S., District Medical Officer of the Smallburgh Union.
FELDMAN, V., M.R.C.S., L.R.C.P., Assistant Medical Officer of the Chelsea Parish Infirmary.
MCGLYNN, J., M.D., R.U.L., Assistant Medical Officer of the Salford Union Infirmary.
MAY-ATKINSON, K. K., M.B., Ch.B. Vict., Assistant Medical Officer of the Brownlow Hill Institution of the Liverpool Parish.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

RYLE.—At Eyton, Wrexham, on March 30th, the wife of Arthur J. Ryle, M.B., Ch.B. Ed., M.R.C.S., L.R.C.P., of a son.

MARRIAGES.

LEECH-BARKER.—At Leonard Stanley, on April 3rd, Ernest Bosdin Leech (of Manchester), M.D., Captain R.A.M.C., to Mary, daughter of the late Rev. H. Walder of Jamaica, and widow of the late Robert Barker of Marple.

LUCAS-MCKAIL.—On April 3rd, at St. James's, West Hampstead, by the Right Rev. the Lord Bishop of Rochester, assisted by the Rev. A. E. Oldroyd, M.A., Captain Reginald B. Lucas, M.B., M.S., R.A.M.C., eldest son of Mrs. A. R. B. Lucas, of Adelaide, S.A., to Cecily Helen, only daughter of Mrs. John McKail, of Adelaide, and niece of Dr. and Mrs. Cunningham, of West Hampstead, N.W.

MAY-WOOD.—At Hillhead, U. F. Church, Glasgow, on the 27th March, by the Rev. Daniel Lamont, B.D., Walter John May, M.B., Lieutenant R.A.M.C., of Knights, Transvaal, elder son of S. J. May, "Braeside," Durban, to Mary Ferguson Wood, M.A., M.B., younger daughter of the late John Wood, East Kilbride, and of Mrs. Wood, 10, Dryburgh Gardens, Glasgow, W.

WHITE-MACKLIN.—On March 1st, 1916, at the British Legation, Teheran, Persia, Dr. Henry White to Alice Martha Macklin, both of the Church Missionary Society's Hospital, Yazd, Persia.

DEATH.

PRICE.—On March 29th, at Hooper's Hill House, Margate, William Price, M.D., last surviving son of David Price, M.D., of Margate, aged 79 years.

DIARY FOR THE WEEK.

WEDNESDAY.

HUNTERIAN SOCIETY, 1, Wimpole Street, W., 9 p.m.—Adjourned Discussion on the Relationship of the Medical Profession to the State and the Community.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF DERMATOLOGY, 5 p.m.—Mr. J. E. R. McDonagh: Chemo-therapy.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF ANAESTHETICS, 8.30 p.m.—Annual General Meeting. Dr. M. S. Pembrey and Dr. F. E. Shipway: Influence of Anaesthetics on the Body Temperature. Demonstrations of Apparatus.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, 5 p.m.—Tuesday and Thursday: Oliver-Sharpey Lectures by Dr. M. S. Pembrey: The Development of the Regulation of Temperature.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.
THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
APRIL.	
7 Fri.	London: Central Ethical Committee, 2 p.m. London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
8 Sat.	Yorkshire Branch, Harrogate, 3 p.m.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

SCOTTISH MEDICAL SERVICE EMERGENCY COMMITTEE.

At the monthly meeting of the general Committee held in the Royal College of Physicians on Saturday, April 8th, it was reported that the medical recruiting scheme instituted by the Committee in December last for the purpose of organizing the medical resources of Scotland to meet the civil and military needs during the war had produced highly satisfactory results. The registration inquiry under the scheme applied to every qualified medical man in Scotland irrespective of age.

Practitioners were divided into three age-groups, and the service appropriate to each group was noted in the schedule as follows:

Group.	Age.	Service.
A.	Under 45	Lieut., R.A.M.C. (<i>general service</i>).
B.	45 to 55.	Lieut., R.A.M.C. (<i>home service</i>). Part-time home military work. <i>Locum tenens</i> away from home (for practitioner absent on service). Part-time home civil work (in carrying on practice or part of practice of neighbouring practitioner absent on service).
C.	56 and upwards	Part-time home military work. <i>Locum tenens</i> away from home (for practitioner absent on service). Part-time home civil work (in carrying on practice or part of practice of neighbouring practitioner absent on service).

The returns, which have now been digested and summarized, show that in many of the Divisions over 90 per cent. of the profession have registered and intimated their willingness to render one or other of the services appropriate to their age-group mentioned in the schedule, and the activities of the local secretaries were fast diminishing the number of the remainder. In one area, where there were 109 doctors on the Committee's list, 100 had registered, and the local secretary soon reduced the remanet to four, two of whom were over 60. In another Division every man under 45 years of age either had a commission or had declared his readiness to take one if called upon.

The levy of 100 which the Committee had agreed to at its February meeting had been largely anticipated by sixty-eight voluntary offers. This number excluded recent graduates, of whom thirty-two had applied for commissions since January 1st, 1916, and another forty would do so before the end of the month. There was no reason to doubt that Scotland would be able to supply its full share of the number asked for by the Director-General.

The profession had responded most loyally to the successive calls, and the devotion of the local committees and the energy of their secretaries had been beyond praise.

The only censure the Committee had had to endure was that of the men whose applications for commissions were not transmitted to the War Office because, in the opinion of the Committee, their acceptance would have unduly depleted the area in which the applicants practised, and there were now a good many areas in Scotland where this was the case.

APPLICATIONS FOR ENROLMENT.

Applications for enrolment should be addressed, if the applicant is resident in England or Wales, to the Secretaries of the Central Medical War Committee, 429, Strand, London, W.C.; if resident in Scotland, to the Secretary of the Scottish Medical Service Emergency Committee, Royal College of Physicians, Edinburgh; or, if resident in Ireland, to the Secretary of the Irish Medical War Committee, c/o British Medical Association, 16, South Frederick Street, Dublin.

Association Intelligence.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, April 26th, in the Council Room, 429, Strand, London, W.C., at 11 a.m.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

March 23rd, 1916.

SUGGESTED CHANGES OF BOUNDARIES.

PROPOSED AMALGAMATION OF CARLOW AND KILKENNY DIVISIONS.

NOTICE is hereby given to all concerned of a proposal made by the South-Eastern of Ireland Branch for amalgamation of the Carlow and Kilkenny Divisions of the Branch. Written notice of the proposal has been given to the Kilkenny Division (the Carlow Division is at present unorganized), and the matter will be determined in due course by the Council. Any member affected by the proposed change, and objecting thereto, is requested to notify the fact, and his or her reason therefor, to the Medical Secretary, 429, Strand, W.C., not later than May 15th, 1916.

BRANCH AND DIVISION MEETINGS TO BE HELD.

LEINSTER BRANCH.—Dr. William Doolin, Acting Honorary Secretary (50, Fitzwilliam Square, Dublin), gives notice that the annual meeting of the Branch will be held at the Irish offices of the Association, 16, South Frederick Street, Dublin, on Monday, May 15th, at 4.30 p.m. Agenda: Appointment of officers. Adoption of revised organization rules and ethical rules. Receive report of financial position. Apply for supplementary grant for 1916 of such amount as the meeting may decide. Any other business.

Meetings of Branches and Divisions.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.

A MEETING of the Buckinghamshire Division took place at High Wycombe on March 21st, preceded by a lunch. The chair was taken by Dr. DUNBAR DICKSON in the absence of Dr. Deyns, for whose speedy recovery from frost-bite contracted on service the meeting expressed its sincere hope. It was stated that the letter written to all the secretaries stating that care should be exercised in granting vouchers for free attendance on the dependants of soldiers and sailors to none but suitable cases had had a good effect. The new ethical rules were adopted, and the proposed reduction of notification fees was shortly discussed.

Recruiting for the Military Services.—The CHAIRMAN introduced Mr. E. B. TURNER, a member of the Central War Committee, who gave a very lucid and convincing address on the necessity of every medical man up to the age of 45 enrolling at once with the Central Medical War Committee. Any man who snatched the patients of a man away at the front would be severely dealt with. On the form of application for enrolment the applicant should give full particulars of any circumstances concerning himself that would enable the Committee to judge as to whether he should be called upon or not. If the enrolment scheme was a failure—and it would be if at least 75 per cent. did not enrol—the Government would adopt a system not so favourable perhaps to the profession. In the discussion that followed, the danger of men who had been to the war coming to a district and setting up practice where the medical men were scarce owing to entering the R.A.M.C. was mentioned. It was also pointed out that as it was impossible to sell a practice, many men were so held by financial liabilities that they could not volunteer. The possibility of drafting men from the seaside resorts to the poorer districts was suggested. When 8 or 10 guineas a week had to be paid for a locum tenent, the pay of the R.A.M.C. was not much use, especially as it was well known that a locum tenent never did as much as the principal. Dr. Selborne Bailey and Dr. W. P. Miles were selected to represent the Local War Committee in London on March 22nd. A hearty vote of thanks was accorded to Mr. Turner for his address and useful advice. As half of those present were of military age his journey was sure to bear fruit.

The Insurance Acts.—A discussion on the Insurance Acts was initiated by Drs. Henderson, Selborne Bailey and Larking. It was calculated that the Commissioners, by keeping back the balances, were making £12,000 a year interest. The deductions for enlistments were out of all proportion to the necessities of the case. The Insurance Committees wrote to the societies and told them that if they did not inform them at once when a man enlisted they would be liable for medical benefit; then they wrote to the doctors and told them they could not pay them because the societies did not notify them. Why, it was asked, was 75 per cent. kept back for temporary residents? The excessive cost of drugs was also referred to. Country practitioners who dispensed their own medicines were hard hit. Finally, the following resolution was passed:

That this meeting asks the British Medical Association to bring before the notice of the Government the advisability of guaranteeing protection to any firm that is willing to lay down plant to manufacture drugs and chemicals that were made in Germany before the war.

Tea was provided and the meeting was one of the most successful ever held in the Division.

BORDER BRANCH, SOUTH AFRICA.

THE following officers were elected at the yearly meeting of the Branch held at the East London Club on January 21st:—*President for 1917:* Dr. Lownds. *Honorary Secretary and Treasurer:* Dr. Anderson. *Committee:* Drs. Alexander, Brownlee, Bruce-Bays, Byrne, Ganteaume, Grant, Hill, MacGregor, Nangle, Nicol, Sutton, and Uppleby. The meeting expressed its regret at the temporary loss of Dr. Hill's invaluable services as secretary consequent upon his leaving for the East African seat of war. The suggestion of the South African Committee that the Branches should pay the expenses of their representatives attending the meetings of the Committee was negatived.

CAPE OF GOOD HOPE: EASTERN PROVINCE BRANCH.

At a meeting of the Branch on March 3rd, held under the chairmanship of Dr. F. A. SAUNDERS, the following officers were elected:

President: Dr. R. T. Harrison.
President-elect: Dr. H. Bell Walker.
Secretary and Treasurer: Dr. E. G. Dru Drury.
Council: Dr. A. Cowper, Dr. R. C. Mullins, Dr. A. J. Tea, Dr. F. A. Saunders, Dr. A. Gooding (Adelaide), Dr. P. B. Grenfell (Alexandria), Dr. J. M. Beyers (Somerset East), Dr. F. W. Hayes (Aliceale).
Central Council Representative: Dr. T. D. Greenlees.

Contagious Abortion in Cattle.—Mr. WM. ROBERTSON read a paper on haemolysins, with special reference to contagious abortion in cattle. The method of showing complement fixation was shown by the aid of diagrams, and also experimentally; the actual haemolysis, which is the crucial stage in the test, was actually effected in the incubator during the course of the evening. In the discussion which followed, Drs. SAUNDERS, PURVIS, LEA, and DRURY took part. A hearty vote of thanks was accorded to Mr. Robertson for allowing the meeting to be held in the Veterinary Laboratory.

INSURANCE.

LOCAL MEDICAL AND PANEL COMMITTEES.

LIVERPOOL.

At a meeting of the Panel Committee on March 14th the question of the delay in the settlement of the 1914 accounts was again considered, and it was decided that a letter be sent to the Insurance Committee protesting against the delay and urging that an early settlement be effected.

BIRMINGHAM.

At a meeting of the Panel Committee on March 14th it was announced that the final settlement for 1914, together with payments already made, would bring the total received by practitioners to over 95 per cent. of the full credit. A subcommittee was appointed to discuss with the representatives of the Insurance Committee the question of persons acting for panel practitioners being required to sign an agreement with the Insurance Committee similar to that entered into by panel practitioners.

It was agreed that in future a month's notice should be given to pharmacists and the Insurance Committee when alterations were proposed to be made in any of the Insurance Pharmacopoeia formulæ, and that such take effect from the first of the month.

At a meeting of the Panel Committee on April 4th it was decided to draw the attention of the Commissioners (1) to the fact that in nearly all occupations extra payments are made on the ground of increasing expenses which also affect the medical practitioner, and to ask that some such special allowance be made to panel doctors; (2) to the action of agents of some approved societies who require practitioners to see patients on the date upon which the certificate for incapacity is given, and who will not accept certificates given less frequently than weekly in chronic cases.

SOUTHAMPTON.

At a meeting of the Panel Committee on March 28th it was decided that it was not advisable to hold a conference of Local Medical and Panel Committees this year in London. A payment in advance on account, calculated on the basis of 1s. 2d. in respect of each insured person on the doctors' lists, was approved. It was decided to pay to the clerk to the Insurance Committee for his services in collecting the expenses of the Panel Committee for 1915 and for 1914 a fee of £4 4s. for each year.

COUNTY OF SOMERSET.

At a meeting of the Local Medical and Panel Committees on March 23rd great dissatisfaction was expressed that the final payment for 1914 had not been received.

It was reported that some seventy doctors in Somerset had now joined the R.A.M.C.

Difficulties which had arisen in regard to acceptance by deputies of patients whose place of residence was distant more than three miles from the deputy's surgery were considered. In one case it was decided that patients might be accepted on the understanding that mileage might be paid as if they had been allocated; and in a second case, where the patients of a doctor who had

resigned from the panel had applied for medical attendance to another doctor in the district, it was decided that these patients should be held to have come on the panel of the new doctor as from the middle of the current quarter instead of the commencement of the following quarter.

BUCKS.

At a meeting of the Local Medical and Panel Committee on February 25th it was decided to support the holding of a conference of Local Medical and Panel Committees in London this year, as it was considered essential to hear the views from Committees all over the country with regard to the large deductions. It was decided to write to the Insurance Committee giving reasons why the proposed deduction of 30 per cent. from the amounts claimed by doctors this quarter was unjust and unreasonable, and pointing out that interest should be paid on the amount deducted.

ISLE OF ELY.

At a meeting of the Local Medical and Panel Committee on February 10th it was resolved to continue the use of the term "Rep. mist." during the same month only of the original prescription. It was resolved to ask the Commissioners for an increased grant for 1915 in respect of mileage, and to distribute the grant for 1915 in accordance with the 1916 scheme.

CORRESPONDENCE.

SURCHARGES.

Dr. R. G. McGOWAN, Honorary Secretary Manchester Medical (and Panel) Committee, writes: The letter from Dr. Alex. G. Fraser, published in the SUPPLEMENT of April 1st, p. 59, seems to me to require the mention of some additional facts before your readers are able to form any useful opinion on the subject in question.

In this area the averages mentioned by Dr. Fraser—namely, the cost per script, the number of scripts per patient, and the monthly cost per patient—are worked out by the staff of the Insurance Committee for the doctors on the list as a body, and for each doctor separately. These averages are considered by the Pharmaceutical Committee, and any excess of any individual average over the general average for the area is made the subject of a representation to the Panel Committee of extravagant prescribing to the amount of such excess. The Insurance Committee, to protect themselves financially, withhold from payment all sums which are the subject of such representations until the matter has been finally dealt with according to regulations. The Panel Committee, in making their required investigation, do so in each case on its merits, examining prescriptions and prescriber before making their report. The fact that should be made especially clear is that the averages mentioned are taken by the Panel Committee as a basis for investigation and not as a basis for surcharge.

A further point of some importance is that up to the present no surcharge whatever has been made for 1915. The Panel Committee have considered representations made with regard to the first quarter of 1915 but have not yet formulated any report thereon.

In conclusion, I would state that this letter is not intended to criticize in any way the views and opinions that Dr. Fraser has formed, but as a statement of certain facts that may help your readers to assess the value of those opinions.

CLERICAL WORK AND WAR WORK.

Dr. T. M. CALLENDER (Slidcup) writes: I notice that Dr. M. S. Harford, in his letter in the SUPPLEMENT of April 8th, alluding to my suggestion of the abolition of record cards during war time, says: "To work a practice without keeping any record of cases must seem to be a most haphazard proceeding." With this I quite agree, but I presume that Dr. Harford parts with his record cards annually, and if he does not keep separate notes of his cases he will have no records remaining. I, like surely most practitioners, keep a visiting list book, in which all my visits are entered, and can be consulted years after if necessary. I could not do this, nor could I carry on my practice satisfactorily, were I dependent entirely upon record cards, which are disposed of annually. I hold strongly that everything should be done at present to relieve the medical profession of superfluous work, and it would be a great relief to the practitioners helping to do the work of their friends who have joined the R.A.M.C. to know that it would be unnecessary at least during the war to keep record cards of their insured patients.

NOTIFICATION FEES.

Dr. E. E. N. SURRIDGE (Knutsford) writes: I am rather surprised that the proposed reduction of the fee for the notification of infectious diseases from 2s. 6d. to 1s. has received so little notice from the profession. It will, of course, only affect those engaged in general practice, who are the poorer members of the profession. It is a piece of meanness which is difficult to

understand when Cabinet Ministers and members of Parliament continue to draw their salaries without reduction. The State requires certain information, which it cannot obtain from any one else, and in this it differs from the Early Notification of Births Act, where the notification can be made by the parents or other persons in the house. For this information it has been accustomed to pay a certain fee, and as money is now, owing to the depreciation of the purchasing power of the sovereign, of less value, it ought rather to pay an increased than a reduced fee for that information. Medical practitioners are heavily taxed owing to the rise in price of spirit, drugs, petrol, and licences, and are certainly deserving of every consideration, as a very large number of those in private practice are doing a great deal of gratuitous work for the country at the present time. Moreover, if the fee is to be reduced, the penalty for failure to notify should also be reduced.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Deputy Surgeon-General O. W. Andrews, M.B., to the *Pembroke*, additional, for East London Recruiting District. Fleet Surgeons A. Woollcombe to the *Hindustan*; S. T. Reid to the *Vivid*, additional; P. H. M. Star to the *Columbine*, additional, for Queensferry Sick Quarters; R. A. Ross to the *Conqueror*; E. S. Miller, M.B., to the *Edmont*, additional, for Malta Hospital; G. M. Levick to the *Antrim*; J. E. Coad, M.B., to the *Supero*; H. Hunt to the *Vivid*, additional, for disposal. Surgeon J. A. O'Flynn, M.B., to the *Edmont*, additional, for Malta Hospital. Temporary Surgeons H. W. S. out to R.M. Division, Chatham (sent temporarily); J. Pratt to the *Dreadnought*; J. Rothwell to the *Victory*; T. C. Russell to the *Excellent*, vice Brownfield; D. M. P. Whitehouse, M.B., to the *Lord Nelson*, vice Barras; E. B. Kelley, M.B., to the *Victory*, additional, for Haslar Hospital.

ROYAL NAVAL VOLUNTEER RESERVE.

To be Surgeon Probationers: E. J. Edward, G. H. Ward, J. L. Wilson, W. H. Evans, T. O. McKenzie, F. N. V. Dyer, J. Ryan, E. V. Cory, W. G. Robson, J. W. C. Fairweather, A. L. Strachan, K. M. Purves, F. C. H. Brown, J. V. Mainprize, A. H. J. Smart, O. S. Thompson.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Major (temporary Lieutenant-Colonel) S. E. Lewis, M.B., relinquishes his temporary rank on ceasing to command a field ambulance.

Majors to be temporary Lieutenant-Colonels whilst commanding casualty clearing stations: W. D. C. Kelly, M.B., D. L. Harding, D. O., F.R.C.S.I., R. F. Ellery.

The following are granted temporary rank whilst commanding field ambulances:—As Lieutenant-Colonel: Brevet Lieutenant Colonel F. G. FitzGerald, Majors B. F. Wingate, M. F. Grant, M.D., G. H. Richard, J. Fairbairn, M.B., Wm. B. Sparkes, J. G. Bell, M.B. As Major: Captain W. E. Marshall, M.B.

Temporary Majors to be temporary Lieutenant-Colonels: A. Lingard, M.B., W. T. Prout, C.M.G., M.B.

Major (temporary Lieutenant-Colonel) T. S. Dudding relinquishes his temporary rank on ceasing to command a field ambulance.

Temporary Major E. W. H. Groves, M.D., F.R.C.S. (Captain R.A.M.C.T.F.), relinquishes his temporary commission.

Temporary Captains E. W. Archer, M.B., and H. B. Maunsell relinquish their commissions.

Temporary Captain W. P. Hogg, M.B., relinquishes his commission on appointment to the I.M.S.

Captain W. R. O'Farrell is restored to the establishment.

The Christian names of temporary Captain John Richard Menzies Whigham, M.B., are as now described, and not as in the *London Gazette* of October 14th, 1915.

Temporary Captain E. W. Archer, M.B., relinquishes his commission.

Temporary Lieutenants to be temporary Captains: O. O'Brien, M.D., W. Garton, E. S. Moorhead, M.B., G. C. Metcalfe, A. Riley, M.B., H. A. Haig, M.B., A. W. Matthew, H. T. L. Roberts, A. M. Pryce, M.B., F. W. Wesley, M.D., G. A. Birnie, M.B., W. C. C. Kirkwood, M.B., J. H. Wilkinson, E. H. Baines, F.R.C.S., J. A. D. Radcliffe, M.B., L. D. Shaw, M.B., W. W. Scott, M.B., A. J. A. Peters, T. G. Brown, M.D., R. Slaney, C. F. Drew, M.B., W. T. Smith, M.B., A. MacKintosh, M.B., T. Ferguson, M.B., C. J. Scholtz, B. W. Gouin, O. S. Kellett, W. E. P. Phillips, F. S. Turner, M. J. Fraser, M.D., H. Owen, M.B., H. R. Brown, M.D., J. R. Mitchell, M.B., H. Dyer, F.R.C.S.E., W. A. Rees, E. Rogerson, M.B., H. B. Lucas, M.B., W. H. Godby, M.B., N. E. Packer, M.B., C. O. Donovan, M.B., R. B. Carter, M.B., E. P. Blanski, M.B., J. L. Digby, M.B., N. McCa. Gregg, M.B., N. W. Broughton, M.B., S. W. G. Lattell, M.B., C. Farraridge, M.B., A. W. Raymond, M.B., W. H. Allen, M.D., T. J. J. Curran, M.D., F. A. L'Estrange, M.B., H. Dudley, J. M. McLachlan, H. R. Souper, M.B., C. Burnham, M.B., H. E. Clutterbuck, M.D., F.R.C.S.E., S. Williams, R. F. Pearce, W. N. Soden, M.D., J. W. Robertson, M.D., N. Smith, J. B. Hunter, A. Renshaw, M.B., H. J. Penny, M.B., J. J. O'Neill, M.B., B. W. Wiberley, M.B., T. F. Noble, M.D., G. R. Pennant, A. R. Quinn, M.B., A. R. Finn, M.D., F.R.C.S., T. H. Whittington, M.D., H. D. H. Willis-Bund, T. H. Agnew, T. W. David, G. W. Perry, R. S. Morshead, M.B., G. M. C. Powell, G. W. FitzHenry.

J. R. Currie, M.D., to be temporary Captain. The Christian name of temporary Lieutenant Hadya Peters is as now described, and not as in the *London Gazette* of March 3rd, 1915.

Temporary Lieutenants relinquish their commissions: C. R. Wright, L. E. G. de Glanville, R. S. Vivian, M.B., J. W. Farrar, M.B., D. F. Finley, M.B., L. B. Daly, M.B., T. C. East, M.D., E. N. Thomson, M.B., J. B. Wortable, M.B., H. H. B. Bayley, L. W. K. Scargill, M.B., A. E. Goldie, M.B., N. D. Mackay, M.D., E. H. Kenny, K. G. Colquhoun, M.B., C. T. Stephen, M.B., H. O. Colville, M.B., A. Pryde, M.B., F. W. Harrowell, M.B., S. Caplan, F. A. M. Green, M.D., J. A. Brown, M.D., H. J. Moon, L. M. Piggott, M.B., E. Greene, M.D.

Temporary Honorary Lieutenants to be temporary Lieutenants: W. H. Marshall, E. I. Davies.

Temporary Lieutenant C. O. Hamilton, M.D., is dismissed the service by sentence of a general court-martial.

To be temporary Lieutenants: G. E. Dodson, W. J. May, M.B., G. B. King, J. N. Glaister, W. A. Curry, M.D., F.R.C.S., D. S. Taylor, V. Wallace, W. J. Tulloch, M.D., C. J. McCarthy, M.B., C. Cairnie,

M.B., W. K. Bell, C. V. Kebbelle, R. Orr, M.B., C. M. Eadie, M.B., D. Rees, W. F. Cornwall, M.B.
V. R. Hirsch to be temporary honorary Lieutenant.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Captain G. V. Stockdale, M.B., to be temporary Major whilst commanding a field ambulance.
Captain C. Lovell, M.D., to be temporary Major whilst commanding a field ambulance.

Captain (temporary Major) H. G. Traylor, M.B., relinquishes his temporary rank on ceasing to command a field ambulance.

To be Lieutenants on probation: Cadet Sergeant-Major G. Morris, M.B., Cadet Sergeant J. A. Crawford, M.B., Lance-Corporals W. H. Ferguson, M.B., and H. D. Wright, M.B., and K. W. Brown, M.B., from the Edinburgh University Contingent O.T.C.

Temporary Lieutenant O. D. Price, M.B., from the R.A.M.C., to be Lieutenant.

Ex-Cadet Sergeant E. W. Mann, M.B., Belfast University Contingent, Officers' Training Corps, to be Lieutenant on probation (substituted for notice in the *London Gazette* of February 18th, 1915).

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

Major C. P. Templeton to be temporary Lieutenant-Colonel.
A. P. Chown to be temporary Captain.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICE.

Lieutenant-Colonel A. D. Sharp, F.R.C.S., from West Riding Field Ambulance, to be Assistant Director Medical Services, West Riding Division, with the temporary rank of Colonel.

Lieutenant-Colonel D. Smart, M.B., from the Sanitary Service, to be Assistant Director Medical Services, West Lancashire Division, with the temporary rank of Colonel.

Lieutenant-Colonel L. J. Blandford, M.D., from the Sanitary Service, to be Assistant Director Medical Services, 1st Mounted Division, with the temporary rank of Colonel.

ROYAL ARMY MEDICAL CORPS.

London Sanitary Company.—Lieutenants A. M. Brown, M.B., to be Captain; D. J. Peebles, M.B., to be Lieutenant.

South Midland Casualty Clearing Station.—Captain E. Whichells, M.B., from South Midland Field Ambulance, to be Captain.

South Wales Mounted Brigade Field Ambulance.—J. O. Cuthbertson, M.B., to be Lieutenant.

Southern General Hospital.—Majors to be Lieutenant-Colonels: W. Collier, M.D., B. H. A. Whitelocke, M.D., F.R.C.S. Captains to be Majors: E. C. Bevers, M.B., H. E. Counsell, F.R.C.S., J. C. R. Freeborn, A. G. Gibson, M.D., W. J. Turrell, M.D., A. T. Waterhouse, M.B.

Northumbrian Field Ambulance.—V. J. White to be Lieutenant. Attached to Units other than Medical Units.—Captain J. C. Denvir, M.B., from Yorks Mounted Brigade Field Ambulance, to be Captain; Surgeon-Major V. Graham, from Yorks L.I., to be Major; Captain W. Marley-Cass relinquishes his commission on account of ill health; Lieutenant C. W. J. Brasher to be Captain; J. S. Hopwood, M.B., to be Lieutenant.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BRISTOL GENERAL HOSPITAL.—House-Physician. Salary, £175 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.

DURY INFIRMARY.—Senior House-Surgeon. Salary, £250 per annum.

CAMBRIDGESHIRE ASYLUM, Fulbourn.—Junior Assistant Medical Officer. Salary, £200 per annum, rising to £250.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Second House-Surgeon. Salary, £150 per annum.

DERBYSHIRE ROYAL INFIRMARY.—House-Physician and Casualty Officer. Salary, £200 per annum.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton, S.W.—House-Physician. Honorarium, 30 guineas for six months.

HUDDERSFIELD ROYAL INFIRMARY.—Junior House-Surgeon. Salary, £100 per annum.

KING EDWARD MEMORIAL HOSPITAL, W.—Resident Medical Officer. Salary, £100 per annum.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LONDON HOSPITAL, E.—Two vacancies on Assistant Obstetric Staff.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—Assistant House-Surgeon (non-resident). Honorarium, 120 guineas a year.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Lady House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL INFIRMARY.—(1) Resident Medical Officer, (2) Resident Surgical Officer, (3) Assistant Resident Surgical Officer, (4) Accident Room House-Surgeon, (5) Resident Medical Officer to the Central Branch. Salary for (1) and (2) £225 per annum, and for (3), (4), and (5), £200 per annum.

NORTHAMPTON EDUCATION COMMITTEE.—Dental Surgeon. Salary, £250 per annum, rising to £300.

NORTHAMPTON GENERAL HOSPITAL.—Two House Surgeons. Salary, £150 per annum.

PUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Senior Resident House-Surgeon. Salary, £300 per annum.

SALISBURY GENERAL INFIRMARY.—Assistant House-Surgeon. Salary, £100 per annum.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN.—Junior Lady House-Surgeon. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Physician. Salary, £120 per annum.

SHREWSBURY DISPENSARY.—Medical Officer.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

TOXTETH PARK TOWNSHIP.—Assistant Resident Medical Officer of the Poor Law Institution and Infirmary. Salary, £300 per annum.

WARWICKSHIRE AND COVENTRY JOINT COMMITTEE FOR TUBERCULOSIS.—Resident Medical Officer for Brancote Sanatorium, near Nuneaton. Salary, £250 per annum.

WATERLOO-WITH-SEAFORTH URBAN DISTRICT COUNCIL.—Medical Officer of Health and School Medical Officer. Salary, £130 and £100 per annum respectively.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.—Female Assistant House-Surgeon. Salary, £100 per annum.

WINSLEY SANATORIUM, near Bath.—Assistant Resident Medical Officer. Salary, £250 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: St. Faith's (Norfolk).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

ARCHER, E. W., L.M.S.S.A., District Medical Officer of the Pockington and Flaxton Out-Relief Unions.

GOTHELE, H. E., M.B.C.S., L.R.C.P., District Medical Officer of the Newton Abbot Union.

JOYCE, H. W., L.S.A., District Medical Officer of the Mansfield Union.

MAINS, J. H., L.R.C.P.Lond., Certifying Factory Surgeon for the Clackmannan District, co. Clackmannan.

MEYNELL, J. L., M.R.C.S., L.R.C.P., District Medical Officer of the Lexden and Winstree Union.

PROCTOR, S. P. P., M.B., Ch.B.Edin., District Medical Officer of the Chesterfield Union.

RYLAND, A., Captain R.A.M.C., F.R.C.S.E., Specialist in Oto-laryngology at the Cambridge Hospital, Aldershot.

TIBBLES, W., L.R.C.P.Edin., M.R.C.S.Eng., District Medical Officer of the Nottingham Parish.

TURNER, William, M.B., F.R.C.S., Surgeon to In-patients to Westminster Hospital.

WARRACK, J. S., M.D.Aberd., D.P.H.Camb., Deputy Medical Officer of Health for the Port of London.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

LYOYD-EVANS.—On March 31st at Tenbury, Worcestershire, the wife of V. Lloyd-Evans, M.B., F.R.C.S.E. (née Gwendolen Irene Pockett), of a son.

TYLOR.—At Beecher's, Oxted, on April 6th, the wife of Christopher Tylor, M.D.Camb., of a daughter.

MARRIAGE.

CLEGG—BROWN.—On April 7th, at Graco Hill Wesleyan Church, Folkestone, Sydney James Clegg, M.D., D.P.H., Captain R.A.M.C.T., younger son of Mr. and Mrs. Clegg, Norwood, Swinton, Manchester, to Janette MacMillan, youngest daughter of the late David Brown of Netherley, Stonehaven.

DEATH.

BRICE.—On April 5th, at Swansea, Major Ernest Brice, R.A.M.C., M.R.C.S., aged 52.

THE REDUCTION OF NOTIFICATION FEES.

THE greatest dissatisfaction is being widely expressed in the whole of the Manchester district at the decision of the Government to reduce the fees for the notification of infectious diseases. At a time when salaries and wages in other directions are being so generally increased, when medical men are so freely giving their services in numerous directions, carrying on the practices of their colleagues, in many cases without any remuneration or at the most only receiving about half the ordinary fees, simply to enable the military authorities to obtain an adequate supply of medical men for the forces; at a time, too, when the "good lives" of the National Insurance lists are being reduced and the "bad lives" increased, involving far more work for the same insurance fees, the action of the Government is very much resented. It is believed that it has been taken now because it was thought that for the moment the profession was not in a position to organize resistance. What makes the injustice felt more keenly is that it will affect almost entirely that class of practitioners who are the least able to bear it. The wealthier sections of the profession and the consultants, as well as medical officers of health and others holding official appointments, will hardly be in the least affected by the reduction, while general practitioners who do the worse-paid part of medical work but who are at present more than ever indispensable to the community, will have to bear the brunt almost entirely. It is being freely suggested that general practitioners should take a leaf out of the match manufacturers' book, recouping themselves by passing on to the public not only the loss but something additional. The reduction of the fees, especially at the present moment, will be remembered in the future as one of the shabbiest things the Government has done.

SIR,—Your correspondent, Dr. E. E. N. Surridge, expresses surprise that so little notice is taken of the reduction of notification fee to 1s. This action is too mean for notice. A Parliament capable of voting its members £400 a year and then cutting down a 2s. 6d. fee is not likely to be amenable to reason. When I register the birth of one of my children I pay 2s. 6d. for a certified copy of the register and 1d. for stamp on same; the gentleman who charges this has not had an expensive education. Again, when he gives a copy of one of my death certificates, to enable someone to pick up insurance money, he still gets 2s. 6d.; I give the original for nothing. When I give the 1s. notification certificate it may land me into the law courts; his 2s. 7d. copy keeps him quite safe from an action at law; he gets his 2s. 6d. clear, I find a 1d. stamp out of my 1s. Evidently the

Government thinks, because we give such a lot of free attendance to the dependants of men at the front, we do not want fees. This free attendance has got such a gigantic task, that it should at once cease; there is really no need for it now, as generally these dependants are earning good money in addition to the Government allowance. I think we have already given more than we can afford, and to meet our very heavy taxation and the reduction in pay, but not in work, of the "inade in Germany Insurance Act," let us now insist on no more free attendance.

Remember, things will be very bad after the war. Then will be the Government's chance for a State medical service. Plenty of out-of-work army surgeons to jump at anything offered.—I am, etc.,

Tipton, April 16th.

T. S. FINCH HUDSON.

SIR,—May I draw attention to the fact that, in addition to the filling up the form for infectious disease notification, we are also required in many cases to fill up a second form for removal by ambulance, and in order to ensure prompt removal of urgent cases the telephone is used for calling up the ambulance?

Half a crown may be considered an exorbitant fee, but I personally think that this is asking too much for one shilling.—I am, etc.,

Streatham, S.W., April 16th.

C. HODGSON, M.R.C.S.

INSURANCE.

TUBERCULOSIS ADMINISTRATION.

SANATORIUM BENEFIT IN DEVONSHIRE.

THE County of Devon Insurance Committee has just issued a pamphlet which purports to be a summary of its Sanatorium Benefit Register up to the end of December, 1915. Fairly full particulars are given for each of 630 cases of tuberculosis which had received treatment through the committee, though, as explained in the preface, the information given is not so complete for the earlier cases as for the later, partly because, as experience has been gained, a more comprehensive and accurate method of recording cases has been developed. At the same time it is pointed out that sufficient time has not been available under present circumstances to tabulate the information obtained in order to show it to the best advantage. Attention is also drawn to the fact that owing to the inadequacy of the funds for the treatment of insured persons, the treatment of dependants has had to be discontinued. The summary of the results shows that of the total number of 630 cases, 244 are marked as showing "improvement," 191 as "stationary," 175 "dead," and

20 have been lost sight of. Of the total number, 387 were males and 243 females. The ages varied from 16 to about 70, though more than a third of the total were between the ages of 21 and 30.

It is of course difficult to summarize to any good purpose the results of treatment in a disease of such a chronic character when the information only extends over less than four years, and when the earlier cases probably included many patients in advanced stages of the disease who had possibly received but little treatment, while the later cases are still under treatment, with doubtful results. It cannot be said that the classification adopted by the committee is of any great practical value, and, unless carefully scrutinized, very erroneous inferences might be drawn. For example, the patients are classified in consecutive hundreds according to the date when the treatment commenced; and when we find that in the first hundred there were 31 improved, 20 stationary, and 44 deaths, while in the sixth hundred there were 44 improved, 45 stationary, and only 6 deaths, it cannot for a moment be properly inferred that the later treatment is in the least respect more efficient, as sufficient time has not elapsed to determine the final results. Moreover, it is noted that the term "stationary" covers all cases still under treatment, relapses, unimprovements, and worse." Difficult as the classification may be, it cannot but lead to wrong inferences if the slightest value is given to statistics which classify as "stationary" patients who have gradually advanced into a hopeless and rapidly sinking condition, while others classified as "improved" may only have shown a very temporary improvement. In short, at the present at any rate, no argument whatever can be properly based on these statistics either against or in favour of the present system of treatment in Devonshire.

HOME AND DISPENSARY TREATMENT.

Evidence as to the practical working of the Insurance Act in respect to the treatment of tuberculosis is gradually accumulating, and several cardinal points are becoming clearly manifest. Some of these are well shown in the report recently presented to his committee by Dr. H. A. Ellis, formerly of Colgardie, and now Tuberculosis Officer to the Middlesbrough Insurance Committee. The notification of tuberculous disease in its early stages is still imperfect. A large proportion of the cases notified in any one year must have been ill for at least two years previously, and many of them appear to have died within a comparatively short period after notification. Such cases are by far the most expensive to deal with, and the money spent upon them brings no advantage to the community. It is not therefore a matter of surprise that the Middlesbrough Committee, with only limited means at its disposal, has decided to treat early cases only, and the results of such a decision are well shown in the latest statistics, which record that 50 per cent. of the cases treated during last year are in full work, although still under dispensary supervision; amongst them are several who have enlisted. His own experience leads Dr. Ellis to advocate a wide extension of home and dispensary treatment in preference to institutional treatment. The main object is to increase the resisting power of the individual, since the liability to infection is universal, and a large proportion of the population are actually infected at some period of their lives. By regulating the home life and by giving assistance when needed he is of opinion that twenty cases may be effectively dealt with at home for the same cost as one such case in a sanatorium. To cope with the great mass of advanced cases is a question of money, for some comprehensive scheme of segregation; where funds are insufficient to meet the requirements of all, it becomes necessary to look to the interests of the community in preference to those of the individual.

NON-PANEL DOCTORS AND NATIONAL INSURANCE CERTIFICATES.

In order to minimize as much as possible the inconveniences caused to doctors who attend insured persons in their private capacity, the Association has published books of certificates which, it is believed, will meet the requirements of approved societies, so far as is practicable in the case of certificates not given under the obligations of the official medical certification rules. The form of certificate is sufficiently like the official form to remove many of the difficulties which insured persons who have

been attended by private doctors have had in satisfying the requirements of their approved societies, but is sufficiently distinct from the official form to show at once that it is being used by a doctor who is attending the patient in a private capacity—that is to say, either by a doctor who is not on a panel, or by a panel doctor other than the one on whose list the insured person is.

The Association has shown the certificates to the Insurance Commissions for England, Scotland, and Wales, and they raise no objection to the issue of them by the Association to medical practitioners for use when attending insured persons not being their panel patients, and not being persons whom they are attending as medical officers of institutions under Section 15 (4), or in virtue of "own arrangements" under Section 15 (3).

The books are being issued at cost price. They contain 50 certificate forms, and may be obtained from the Financial Secretary and Business Manager, British Medical Association, 429, Strand, W.C., price 6d. each, post free.

LOCAL MEDICAL AND PANEL COMMITTEES.

NORTH TIPPERARY.

At a recent meeting of the North Tipperary Local Medical Committee Dr. B. C. Powell (Roscrea) was presented with an illuminated address and gold wrist watch by the members of the North Tipperary Medical Committee in recognition of his services as secretary of the Local Committee and its representative on the Irish Medical Committee.

A resolution was also passed thanking Dr. Thomas Hennessy, Medical Secretary, Dublin, for his services to the profession during the long drawn out negotiations for a settlement of the certification question under the Insurance Act.

INSURANCE ACT IN PARLIAMENT.

The Number of Approved Societies.—In reply to Mr. Raffan, the Chairman of the Joint Committee of Insurance Commissioners said, on April 13th, that approved societies in the United Kingdom numbered on:

January 1st, 1914	2,326
" 1st, 1915	2,124
" 1st, 1916	1,738

Exemption for Friendly Society Officials.—Captain Douglas Hall, on April 17th, asked Mr. Charles Roberts whether he could see his way to secure exemption from military service for the head secretary or other official of friendly societies with a membership of over 500 members who might be exclusively engaged in administering the Insurance Acts, with a view to avoiding the breakdown in the efficient management of the State section of these societies. Mr. Roberts said that he had given the matter very careful consideration, and while fully recognizing the necessity of avoiding a breakdown, was not satisfied that the course suggested would be the best method of effecting that object. A letter had, he said, been addressed to the approved societies advising them as to the best method to pursue in the matter.

Association Intelligence.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, April 26th, in the Council Room, 429, Strand, London, W.C., at 11 a.m.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

March 23rd, 1916.

Meetings of Branches and Divisions.

BOMBAY BRANCH.

At the annual meeting of the Branch, held in the University Library on March 9th, when Lieutenant-Colonel ASHTON STREET, I.M.S., was in the chair, it was announced that the following officers had been elected:

President: The Hon. Surgeon-General R. M. Lyons, I.M.S.

Vice-Presidents: Lieutenant-Colonel Ashton Street, I.M.S., Dr. B. Row.

Honorary Secretary and Treasurer: Mr. D. R. Bardi, F.R.C.S.I.
Members of the Branch Council: Dr. Sorab K. Nariman, Lieutenant-Colonel S. C. Evans, I.M.S., Major E. F. Gordon Tucker, I.M.S., Dr. Sorab K. Engineer, Miss A. M. Benson, M.D., Assistant Surgeon E. S. Bhaurucha.

The appointment of a Representative to the Representative Meetings was postponed.

Annual Report.—The annual report of the Branch presented to the meeting stated that five meetings, of which one was a clinical meeting, had been held, and gave particulars of the clinical cases and specimens exhibited, as well as a list of reports, etc., received.

Vote of Condolence.—A letter of condolence was directed to be sent to Mrs. Childe and her family on the death of Lieutenant-Colonel L. F. Childe, I.M.S.

Clinical Records.—It was resolved to publish a small brochure containing photographs of important cases shown at the Branch meetings during the year.

Cases.—Clinical cases were shown by Lieutenant-Colonel A. STREET, Professor F. G. BADGER, and Dr. FERNANDES.

Before the termination of the meeting the CHAIRMAN congratulated Dr. Bardi on his unanimous re-election as honorary secretary and treasurer.

BRITISH GUIANA BRANCH.

At the meeting of the Branch held at Georgetown on March 15th Dr. MILLER read a paper on surgical complications and sequelae of typhoid fever.

The following officers were elected for the year:

President: Dr. Gomes.
Vice-Presidents: Drs. von Winckler and Craigen.
Council: Drs. Wise, Ozzard, Edmonds, and Mitchell.
Auditors: Drs. Fiddian and Burton.
Honorary Secretary: Dr. F. G. Rose.

SOUTH-EASTERN OF IRELAND BRANCH.

An ordinary meeting of the Branch was held at Waterford on April 5th, when the President, Dr. QUIRKE, was in the chair.

A resolution was unanimously passed to the effect that, owing to the small membership in the Carlow Division and the difficulty experienced in getting a quorum to hold meetings, application be made to have it amalgamated with the Kilkenny Division.

On the motion of Dr. DENIS WALSH a vote of sympathy was passed with Sir Thomas Stafford, Bt., F.R.C.S., Medical Commissioner, Local Government Board, on the death of his wife, Lady Stafford.

The meeting decided to subscribe, from the private fund, £5 to Dr. Power's testimonial.

BRANCH AND DIVISION MEETINGS TO BE HELD.

LEINSTER BRANCH.—Dr. William Doolin, Acting Honorary Secretary (50, Fitzwilliam Square, Dublin), gives notice that the annual meeting of the Branch will be held at the Irish offices of the Association, 16, South Frederick Street, Dublin, on Monday, May 15th, at 4.30 p.m. Agenda: Appointment of officers. Adoption of revised organization rules and ethical rules. Receive report of financial position. Apply for supplementary grant for 1916 of such amount as the meeting may decide. Any other business.

STAFFORDSHIRE BRANCH.—Dr. Harold Hartley, Honorary General Secretary (Bastord, Stoke-on-Trent), gives notice that the third general meeting of the session will be held at the Victoria Hotel, Wolverhampton, on Thursday, April 27th, 1916, when the President, Dr. P. M. Rowland, will take the chair at 4.30 p.m. Business:—Exhibition of living cases. Papers:—(i) H. C. Maetier: Insurance Act Developments and Problems; (ii) E. H. Coleman: Tuberculin and Vaccines from the General Practitioner's Point of View. Dr. J. A. Codd: The "Coolidge Tube." Exhibition of pathological specimens, etc. Dinner at 7 p.m.; charge 5s.

WORK FOR ABSENT COLLEAGUES.

A CORRESPONDENT asks questions generally as to the conditions under which doctors remaining at home are expected to do the work of their colleagues who have joined the forces, and specifically whether any special arrangements have been made with regard to operations. We are not in a position to answer this last question, but the following document, prepared some time ago by the Central Medical War Committee, may be of general service:

Advice as to Local Arrangements.

There are three methods by which the practice of a medical man on military service can be carried on:

- (a) Neighbouring practitioners;
- (b) Locumtenents;
- (c) A bureau organized by colleagues.

In practices in which work is taken over by local men the main questions are:

Division of fees.

Restoration of patients to absentee on his return.

I.—As regards fees the best plan seems as follows:

- A. Town practices, where mileage is not an important question. An equal division of remuneration between the absentee and his representative.
- B. Combined town and country practices. As a general rule, probably a division in the proportion of three-eighths to the absentee and five-eighths to the man who does the work and pays the expenses is best.
- C. Country practices. Where the question of travelling expenses is important, at least three-fourths should be allotted to the man who does the work.

II.—Restoration of patients.

The Committee considers that the following measures should be adopted:

- A. Draw up agreements between the practitioner going on service and his local colleagues in some such form as that adopted by the Mid-Cheshire Division of the British Medical Association, namely:

I hereby promise on my word of honour that if any persons who are ordinarily patients of any medical man practising in this neighbourhood who is on active service with the Forces consult me during his absence, I will attend them for him (on the terms arranged by the Local Committee) and will refuse to act as their medical attendant on my own behalf until at least one year from my colleague's return has elapsed. Also, I will do all in my power to safeguard the absentee's interests with his patients, and to induce them to return to him when he resumes practice.

Signed
Date.....

- B. Urge those going on service to appoint a legal representative who may be consulted on their behalf during their absence.

- C. The Central Committee will be prepared to offer its services in arbitrating on any difficulty or dispute referred to it by the Local Committee.

III.—

- A. Local Committees should impress upon all local public bodies the importance of setting free any medical men of military age in their employ, while keeping their appointments open to them on their return. Arrangements for carrying on public work by means of the older practitioners in the neighbourhood should be made wherever possible.

- B. Insurance Committees should be approached in every district, in order to discourage as far as possible the transfer of patients from a doctor absent on military duty.

- C. Panel Committees should be asked to arrange that no practitioner shall take over as a panel patient any insured person on the list of a doctor absent on military service, until twelve months after the latter's return.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Fleet Surgeon J. E. Coad, M.B., to the *Pembroke*, additional, for disposal. Surgeons A. B. Clark, M.B., to R.M. Division, Chatham; M. J. Aitken, M.B., to the *Seagull*. Temporary Surgeons C. D. Hagan, M.D., to Haslar Hospital; B. H. Mice, to the *Black Prince*; A. L. Butcliffe, M.B., to the *Victory*, additional, for Haslar Hospital.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon probationers F. H. Richards to the *Stag*, vice Prentice; H. T. Cribbon to the *Landrail*, vice Mooney; F. N. Reynolds to the *Oak*, vice Smith; J. M. Higginson to the *Lurcher*, vice Matheson; G. L. Cutts to the *Laertes*.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Major (temporary Lieutenant-Colonel) C. Bramhall relinquishes his temporary rank on re-posting.

Granted temporary rank whilst employed at the Northampton War Hospital:—As Lieutenant-Colonel: W. Harding, M.D. As Major: F. J. Stuart.

C. H. Benham, M.D., Captain R.A.M.C.(T.F.), to be temporary Major. A. D. Vardon, late Captain Band's Artillery Volunteers, to be temporary Captain (substituted for notice published in the *London Gazette* of October 23rd, 1915).

C. S. Young, Captain R.A.M.C.(T.F.), to be temporary Major whilst employed at the Dundee War Hospital. To be temporary Captains: H. L. Roe, M.B., late temporary Captain; temporary Captain H. C. Senon, M.D., from I.M.S.; Lieutenant (temporary Captain) A. J. R. Wright, M.B., F.R.C.S., from R.E.(T.F.). Temporary Lieutenant D. R. Campbell, M.D., relinquishes his commission on account of ill health.

Temporary Lieutenants relinquish their commissions: T. A. Brandon, M.B., W. G. S. Thomson, M.B.
Officers of the Canadian A.M.C. to be temporary Lieutenants: Captain R. H. L. O'Callaghan, M.D., Lieutenants H. B. Thompson, J. W. Kergin, M.B., W. T. Little, G. J. C. Ferrier, G. T. Griffith, E. A. Morgan, A. J. Shilstra, C. W. Walker, T. B. Brandon, M.D.
To be temporary Lieutenants: J. T. Bleasdel, A. StJohnston, G. R. Naylor, M.B., J. A. O'Dea, M.B., J. A. C. Roy, M.B., T. G. Fotherstonhaugh, M.B., R. S. Novis, E. E. Chipp, W. H. C. Romanis, M.B., F.R.C.S.

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

R. Howey to be temporary Captain.

AUSTRALIAN ARMY MEDICAL CORPS.

Major G. B. Carter (Major, Reserve of Officers) is dismissed the service by sentence of a general court-martial.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenants to be Captains: J. H. C. Walker, M.B., M. B. King, M.B., R. H. Graham, M.B., A. G. Fisher, M.B., W. Hunt, M.B., C. McLi. West, M.B.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Highland Field Ambulance.—Captain (temporary Major) G. Davidson, M.D., relinquishes his temporary rank on ceasing to command a field ambulance. Lieutenant J. B. Foubister to be Captain.

Lowland Field Ambulance.—J. Morham, late Captain (temporary Major Royal Scots, to be Captain.

Northern General Hospital.—Lieutenant J. Pearson, M.B., to be Captain.

East Lancashire Field Ambulance.—R. J. Chapman, M.D., to be Lieutenant.

London Field Ambulance.—Lieutenant W. M. Langdon to be Captain.

London Sanitary Company.—Captain V. P. Norman relinquishes his commission on account of ill health To be Lieutenants: J. Griffiths, Acting Sergeant-Major J. A. Andrews.

Welsh Field Ambulance.—J. T. Samuel to be Lieutenant.

Superannuation for service with the O.T.C.—W. Wright, M.B., F.R.C.S., to be Lieutenant for service with the medical unit of the University of London Contingent, Senior Division, O.T.C.

Attached to Units other than Medical Units.—Lieutenant W. W. Horton, M.D., to be Captain. Surgeon-Major E. G. Stocker, from Wessex Divisional Engineers, to be Major. Lieutenants to be Captains: H. Smith, M. B. Dawson. To be Lieutenant: W. Taylor, M.B.

TERRITORIAL FORCE RESERVE.

ROYAL ARMY MEDICAL CORPS.

Captain R. G. Willis, M.B., from West Lancashire Field Ambulance, to be Captain.

Captain W. J. C. Pitt, from the South Midland Field Ambulance, to be Captain.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Resident Surgical Officer. Salary from £200 to £300 per annum and £5 laundry allowance.

BRIGHTON COUNTY BOROUGH ASYLUM, Hayward's Heath.—Temporary Assistant Resident Medical Officer. Salary, 25 guineas a month.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.

BURY INFIRMARY.—Senior House-Surgeon. Salary, £250 per annum.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Second House-Surgeon. Salary, £150 per annum.

FEDERATED MALAY STATES.—Assistant Superintendent of the Government Central Lunatic Asylum. Salary, £400 per annum, rising to £600.

FEDERATED MALAY STATES GOVERNMENT.—Lady Medical Officer. Salary to commence, £350 first year and allowances.

HUDDERSFIELD ROYAL INFIRMARY.—Junior House-Surgeon. Salary, £100 per annum.

KING EDWARD MEMORIAL HOSPITAL, W.—Resident Medical Officer. Salary, £100 per annum.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Lady House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL INFIRMARY.—(1) Resident Medical Officer. (2) Resident Surgical Officer. (3) Assistant Resident Surgical Officer. (4) Accident Room House-Surgeon. (5) Resident Medical Officer to the Central Branch. Salary for (1) and (2), £225 per annum, and for (3), (4), and (5), £200 per annum.

NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—Temporary Assistant Surgeon (female).

FUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Senior Resident House-Surgeon. Salary, £300 per annum.

SALISBURY GENERAL INFIRMARY.—Assistant House-Surgeon. Salary, £100 per annum.

SCHIFF HOME OF RECOVERY, Knowle Hill Park, Cobham.—Resident Surgical Officer. Salary, £200 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Physician. Salary, £120 per annum.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

VENTNOR: ROYAL NATIONAL HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.—Assistant Resident Medical Officer.

WINSLEY SANATORIUM, near Bath.—Assistant Resident Medical Officer. Salary, £250 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointment: Acle (Norfolk).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

DAVIES, W. F. L., M.R.C.S., L.R.C.P., District Medical Officer of the Newtown and Llanidloes Union.

ERSKINE, W. J. A., M.D., Edin., Medical Superintendent of the Isle of Wight Asylum, Newport.

FABRE, B. T., M.R.C.S., L.S.A., Certifying Factory Surgeon for the Brighouse District, co. Yorks.

MACKENZIE, Miss Rachel E. W., M.B. Lond., D.P.H. Oxon., part-time Medical Officer to the Tottenham Urban District Council.

PALMER, A. S. M., M.D. Camb., Medical Officer of the Convalescent Home, Worthing, of the Kingston (Surrey) Union.

SMITH, J. H., M.B., C.M. Edin., Medical Officer of the Institutions and First District of the Stockport Union.

EDINBURGH ROYAL INFIRMARY.—The following appointments have been made:—Resident Physicians: C. E. Hill, M.B., Ch.B., to Professor Sir T. R. Fraser; Adam Prentice, to Professor Russell; Robert Crawford, M.B., Ch.B., to Dr. Boyd; J. M'Auslin, to Dr. Fleming; and C. E. Blair, M.B., Ch.B., to Dr. Kainy. Resident Surgeons: W. A. Mein, to Mr. Cathcart; Alexander Cleland, M.B., Ch.B., to Mr. Hodsdon; E. O. A. Singer, to Mr. Scot Skirving; C. B. C. Anderson, Gerald W. Grant, R. D. Cameron, to surgical outpatient department, per Mr. Jardine; and A. Keith Gibson, to Dr. Barbour. Clinical Assistants: A. Campbell, M.B., E. D. Daiziel Dickson, and J. MacLean, M.B. Toronto, to Dr. Logan Turner.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded in Post Office Orders or Stamps with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

TATE.—On April 11th, at Hill House, Stamfordham, Newcastle-on-Tyne, the wife of Ed. Tate, M.D., of a son.

WARD.—On April 17th, at Withycombe Lodge, Torquay Road, Paignton, to Dr. and Mrs. Ward a daughter.

DEATH.

DONALDSON.—On April 7th, at his residence, 23, Eaton Square, Terenure, co. Dublin, Robert Donaldson, M.R.C.S. Eng., J.P., late of Fort Hill, Castle Shane, co. Monaghan.

DIARY FOR THE WEEK.

WEDNESDAY.

HUNTERIAN SOCIETY, 1, Wimpole Street, W., 8.30 p.m.—Annual general meeting.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammersmith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date. Meetings to be Held.

APRIL.

26 Wed. London: Council Meeting, 11 a.m.

27 Thur. Staffordshire Branch, Victoria Hotel, Wolverhampton, 4.30 p.m.: Dinner, 7 p.m.

28 Fri. London: Executive Subcommittee of Central Medical War Committee, 2.15 p.m.

MAY.

3 Wed. London: Central Medical War Committee, 2 p.m.

15 Mon. Leinster Branch, Annual Meeting, Dublin, 4.30 p.m.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs.

BY ORDER.

MATTERS REFERRED TO DIVISIONS.

A RETROSPECT OF THE FINANCES OF THE ASSOCIATION.

The Finance Committee presented the following report (prepared at its request by the Treasurer and Financial Secretary) to the meeting of the Council on April 26th:

GENERAL FINANCIAL MOVEMENTS, 1906-15.

(1) The Treasurer and the Financial Secretary and Business Manager, in submitting their report, have taken the period 1906 to 1915, both years inclusive. This period of ten years covers the time prior to the demolition of the old building and the erection of the new premises, includes the period of the heavy expenditure the Association had to face in connexion with the introduction and passing into law of the National Insurance Act, the raising of the subscription, and seventeen months of war conditions.

(2) The following tabulated statement presents a chronological record respectively of receipts and expenditure throughout the decade, the progress of the bank overdraft and other borrowings, and the total surplus assets:

Year.	Income.	Add from Insurance Defence Fund.	Expenditure.	Excess Income over Expenditure.	Excess Expenditure over Income.	Bank Overdraft.	Other Loans.	Loan Interest.	Surplus Assets.
1906	£ 52,002	—	£ 50,616	£ 1,385	—	Nil	Nil	Nil	103,644
1907	52,520	—	51,201	1,319	—	12,228	—	158	104,090
1908	53,487	—	52,754	732	—	40,468	—	963	103,814
1909	55,614	—	54,618	995	—	43,754	—	1,607	104,199
1910	59,472	—	57,377	2,094	—	44,150	—	1,665	106,294
1911	61,484	6,446	67,772	207	—	46,150	—	1,613	106,501
1912	65,912	7,054	81,800	—	8,834	49,500	—	1,815	97,667
1913	65,644	—	69,721	—	4,076	45,000	10,500	2,244	93,590
1914	74,844	—	59,548	15,296	—	31,500	10,100	1,835	108,887
1915	66,355	—	53,477	12,877	—	14,000	10,100	1,267	121,765

(3) The main sources of income are subscriptions, advertisements, sales of JOURNALS, interest on investments, and rents. The rents as a result of the rebuilding have risen from £476 to £2,300 a year. The surplus

assets represent the realizable value of the property of the Association on December 31st in each year after providing for all possible debts.

(4) While the foregoing schedule shows the financial position from year to year, it is advisable to amplify by narrative and recapitulate some points that may not be familiar to all the present members of the Committee.

THE REBUILDING OF THE PREMISES OF THE ASSOCIATION.

(5) As a result of the reorganization of the Association in 1902, it soon became apparent that the office accommodation was inadequate for effectively housing the staff and adequately dealing with the large increase of work. After careful consideration of the then existing premises and the possibilities of disposing of the property and moving to a new site, the Council was convinced that the soundest financial proposal was to pull down the old premises and rebuild. This demolition and rebuilding of the property, 429, Strand, 2, 3, 4, and 5, Agar Street, and 1 and 2, Harvey's Buildings, was commenced in the year 1907. At the time, outside its real property, the Association was possessed of liquid assets, amounting to some £14,000, invested in Bank of England and Midland Railway 2½ per cent. Debenture Stock. It was decided not to realize these investments, it being considered preferable to continue to hold these securities against any sudden emergency. The question then arose as to how the rebuilding should be financed, the contract entered into being approximately £45,000, against which cash would have to be forthcoming as the work progressed. The original idea was to mortgage the real estate to an insurance company at a fixed rate of interest. Negotiations were opened, and the preliminary formalities and survey actually completed when it was found that the Association under its Memorandum had not the necessary powers to execute a valid mortgage. It would have been possible to have taken steps there and then to get these powers, but about this time there was under consideration the possibility of petitioning the Sovereign for a Royal Charter, and it was felt it might be left to secure the power in the charter. Difficulties arose, the petition for a charter was abandoned, and the alteration of the Memorandum to enable the Association to mortgage its property was not actually sanctioned by the High Court until seven years later. Meantime, the building operations were in course of execution, and means of meeting the expenditure had to be found. In view of the absence of power to mortgage, the propriety of raising the money within the Association in the form of debentures was considered and abandoned. Consequently, the only practical solution seemed to be to obtain the money from the bank against the deposit of the

deeds of the freehold property. This was done, and the money advanced at bank rate with a minimum charge of 4 per cent. per annum. The arrangement was intended as a purely tentative provision pending the alteration of the Memorandum. Such an arrangement, so long as it was purely temporary, was a sound provision for meeting the expense of rebuilding, but when prolonged it left the Association exposed to the risk of serious pressure in the event of financial panic. Such a panic occurred at the close of July, 1914, and bank rate rushed up to 10 per cent., but after a week it dropped to 5 per cent., where it has since remained.

(6) Until the sudden outbreak of war in August, 1914, the terms of accommodation from the bank could not be considered onerous, and in the light of subsequent events, perhaps, have proved to have been the most economical lines on which the Association could have financed the rebuilding of its premises. When in the early part of 1914 the Association could have taken advantage of its power to mortgage, it is unlikely that a loan could have been arranged on terms as favourable owing to the rising value of money, and even then it would have been subject to be called in by six months' notice. While the greater security of getting rid of a fluctuating rate of interest is not to be questioned, it must be remembered that legal charges, stamp duties and fresh survey fees, would have had to be met. The total expenditure incidental to the rebuilding was £47,053, all of which, with the exception of about £3,000, had to be met by borrowing from the bank. As a result of this capital expenditure, the Association was provided with modern and enlarged premises, and through the increased rents a return of rather over 4½ per cent. on the outlay; or, if the site-value is included with the buildings thereon, a return on capital of nearly 2 per cent., combined with modern accommodation rent free. This was the position at the close of the year 1909.

NATIONAL INSURANCE ACT CAMPAIGN.

(7) In the following year, 1910, commenced the heavy expenditure the Association had to face in connexion with the coming of the National Health Insurance legislation. In spite of this, on the year there was a surplus of £2,094, yet it was necessary to increase the loan account by £400 to £44,150. The apparent anomaly is due to the fact that the balance on current account was higher by £600 and the outstanding realisable assets were more by some £1,400.

(8) In the next year, 1911, the income of the Association was more by nearly £8,500, but £6,445 of this came from the Insurance Defence Fund. Concurrently the expenditure increased by £10,400. But for the contribution from the Insurance Defence Fund the surplus of £207 must have been a deficit of £6,238. The net result involved increasing the loan from the bank to £46,150.

(9) In 1912 the expenditure further rose to £81,800; to meet this the income was short by £8,834, even with a contribution of £7,054 from the Insurance Defence Fund. But for this assistance the deficit would have been £15,888. In this year, in addition to the Insurance Act expenses, the Association was involved in litigation to the amount of about £7,000. To meet its obligations the Association had to borrow yet more, and the loan was increased to £49,500.

(10) Again in 1913 the Association exceeded its income by £4,076, owing primarily to the Insurance Act, although there were abnormal legal expenses aggregating about £1,400. With the close of 1913 the severe financial strain resulting from the fight around the passing of the National Insurance Act was relieved. It is not easy to show the exact amount the fight cost the Association between 1910 and 1913. Taking the year 1909 as the unit, between that time and the close of 1913 the Association's increased expenditure for the period totalled £58,290; from this must be allowed £8,400, being expenses of litigation. This leaves £49,800 increased expenditure to be accounted for. After discounting an expected annual increase of expenditure on the basis of £2,000 a year, there is still left £41,800, which it is not unreasonable to call Insurance Act expenditure, towards which £13,500 was contributed from the Insurance Defence Fund, leaving the Association to find £28,300. In arriving at this figure no provision is made for the expenditure incurred and met by Divisions and Branches out of the capitation grants.

(11) It has already been shown that to meet this expenditure the accommodation at the bank at the close

of 1912 rose to as much as £49,500, while the outstanding liabilities on December 31st exceeded by £3,000 those of the previous year. The following year the loan account would have risen to £55,600, but, instead of going to the bank for the full amount, the Association borrowed at 4 per cent. £10,000 from the Insurance Defence Fund, giving as security the Bank of England and Midland Railway Stock, and £600 from the Central Emergency Fund. Thus, at the end of 1913, six years after the Association had started to rebuild its premises, whereby the rent roll had been raised from about £476 to about £2,350 per annum, the loan from the bank, instead of being repaid in part or in whole, stood at £45,000, while, in addition, the Association had borrowed £10,600, or a total of £55,600.

THE RAISING OF THE SUBSCRIPTION.

(12) In 1914 the subscription to members within the United Kingdom was varied from 25s. to £2 2s. As a result a certain number of members resigned, but the revenue was favourably influenced to the amount of £9,000, and £7,000 the following year.

THE INFLUENCE OF THE WAR.

(13) In 1914, before the war, considerable economy was being effected in the production of the JOURNAL, owing to the increased charge for advertisements. Directly war broke out a great reduction in the size of the JOURNAL was effected, and on the year the cost of producing the JOURNAL was lowered by £9,000. These facts, combined with the general reduction in Association expenditure, made it possible in 1914 to reduce the loan from the bank by £13,500 and the loan from the Insurance Defence Fund by £500, and at the same time liquidate the somewhat swollen liabilities brought forward from the previous year. The year closed with the Association owing the bank £31,500, on which 5 per cent. interest had now to be paid, the Insurance Defence Fund £9,500, and the Central Emergency Fund £600, or a total of £41,600.

(14) This brings the history down to the last year of the decade under review. There was in 1915 some falling away in the revenue derived from subscriptions as compared with the previous year, yet the amount exceeded the year 1913 by £7,000, so on the two years the £2 2s. subscription from members within the United Kingdom resulted in something like £16,000 additional money accruing to the Association, while the adverse influence on the numerical strength meant an indirect saving in the cost of producing the JOURNAL. This year also resulted in a great saving in the cost of producing the JOURNAL, apart from any decline in the number of copies printed. From January to October the literary and advertisement pages were materially curtailed, while for the last two months, owing to the revised postal arrangements, actually it was restricted to 88 pages a week. Against this there have been the adverse factors of serious increase in cost of labour and material, and reduced revenue from advertisements; but the result on the year shows in the cost of production a saving of £4,212 as compared with 1914, while compared with 1913, the last complete twelve months before war, the cost is down by £13,217.

(15) In 1915 the loan from the bank was further reduced by £17,500 to £14,000, the other loans remaining unaltered at £10,100.

(16) The general result is that the indebtedness of the Association, bank overdraft and other loans, which arose originally to meet the expenditure on the new buildings as a deliberate policy, but was increased by the large excess of expenditure over both ordinary and extraordinary receipts due to the Insurance Act, has been decreased from £43,754 in 1909, the year the building was completed, and £55,600 in 1913, the year the Insurance controversy came to an end, to £24,100 at the end of 1915.

(17) Generally, since the close of 1913, the expenditure of the Association was on the downward grade, and since the outbreak of war many of its activities have been interrupted. This, combined with the £16,000 additional subscription money and the £13,200 saved in the production of the JOURNAL, has made it possible to reduce the loans by £31,500 in the last two years.

EDWIN RAYNER, M.D.,
Treasurer.

GUY ELLISTON,
Financial Secretary and Business Manager.

April 19th, 1916.

REDUCTION OF NOTIFICATION FEES.

The following letter has been addressed to the six members of Parliament whose constituencies are in the Edinburgh Branch:

BRITISH MEDICAL ASSOCIATION.

(Edinburgh Branch.)

78, Polwarth Terrace, Edinburgh,
April 25th, 1916.

Dear Sir,

In the name of the medical profession we respectfully and earnestly request your assistance in opposing the reduction of the fee for notification of infectious diseases from 2s. 6d. to 1s.

The Committee on Retrenchment state that "the amount of labour involved is very slight." We cannot view the service as a question of clerical work, because each report involves carefully determined professional opinion, depending on skilled diagnosis, as well as responsibilities to the public authorities, the patient, and the patient's contacts. This is performed under a certain penalty for failure to notify, which it is not proposed to modify.

The half-crown now given is often in the poorer classes the only fee obtained for the visit as well as the notification. These cases should have prompt attention, and this often means increased expense and trouble to the doctor. In many infectious cases, particularly diphtheria, the delay of a few hours, still more of a night, would add seriously to the gravity of the case, and in a proportion of these would even involve the loss of life. If the fee were reduced to 1s. the remuneration obtained would be so small as to discourage the practitioner in attending to such work. Off the 1s. the doctor would have to pay postage and often the expense of telephoning. The result would ultimately be prejudicial to the public health.

Our profession has responded nobly to the medical necessities of the war, the voluntary offers of service having been all the time ample, to say the least, to meet the requirements of the War Office.

The medical profession is also giving gratuitous medical attendance to large numbers of the necessitous dependants of men serving with the colours. This is also extended to many in civil life in distress through war conditions.

Doctors' expenses have also increased during the war. Taking all these matters into consideration it seems, therefore, particularly unfair to force this reduction of income on the medical profession.

We trust you will kindly give us your valued help.

Yours faithfully,

(Signed) JOHN STEVENS, M.D., F.R.C.P.E.,
Honorary Secretary.

A similar letter has been sent to the other members of Parliament within the Edinburgh Branch by Dr. Keppie Paterson, Honorary Secretary to the Edinburgh and Leith Division.

SIR,—There is one aspect of this question which is of great importance, and that is the serious effect the reduction of the notification fee may have on the early notification of cases of pulmonary tuberculosis. Even with the present fee it is difficult to obtain early notification. Every medical officer of health knows from experience how many cases are not notified until late in the illness, and sometimes only when death is imminent or has occurred.

Instead therefore of reducing the fee public policy calls for an increased fee so far as pulmonary tuberculosis is concerned, and suggests that the fee—say, of five shillings at least—should be given for early diagnosis and not merely for notification. It would be fairly easy to make adequate provision to prevent abuse of such a measure, which is the only objection likely to be taken to it.—I am, etc.,

Public Health Department,
Bartlepool, April 24th.

GEORGE JUBB.

SIR,—The Infectious Diseases Notification Act of 1889 demands *compulsory* notification by (a) the head of the family, etc.; (b) by the medical practitioner. This Act differentiates the skilled information for which 2s. 6d. has been determined as a fee to every medical man who notifies the case. In the case of (a) the Act is a dead letter, but it is enforced as to medical men. The notification gives valuable information to the local authority, which takes action in the interests of the public as well as of the affected and relatives. This work involves on the part of the medical man (1) making a skilled diagnosis, (2) loss of patient's fees, (3) upset of programme to phone

to authorities, (4) formal notification with postage, (5) frequently a second visit to house, (6) certificate to nurse to remove the case, (7) in private cases making arrangements for it at a hospital. Reason of "economy" given for reduction is insufficient, since a large area exists for economy in the expenditure on the war. Once the profession permits the reduction without protest, it will remain for good, and we shall have a *statutory* recognition of one shilling for the work involved, which no trade or other profession would tolerate, and is detrimental to our status. By a process of compulsion we are to take the shilling. The notifications required by the Factory and Workshops Act and that of tuberculosis are not brought into consistent action of the proposed reduction. The war has raised the price of drugs and involved loss of income in many ways, hence the war as a reason should have advocated a rise rather than a reduction. Because notifications are being added to by increase of other diseases to the list is no argument, as the fee is for the work involved. Notifications by institutional medical officers are really duplicate notifications, that is, notifications by them of cases already notified by the general practitioner, but the Act allows this, also the notification of the same case irrespective of the number of practitioners who have seen that case. Herein lies one way of thwarting the mean and undignified action of the Retrenchment Committee. All Branches should protest through their local members of Parliament.—I am, etc.,

April 23rd.

N.

INSURANCE.

APPROVED SOCIETIES AND IRISH DOCTORS.

At a meeting of the committee of the Oulart branch of the Irish National Trade and Labour Insurance Society, the Chairman expressed satisfaction at the smooth working of the Act since the appointment of the medical attendants as medical certifiers. These gentlemen had already displayed marked ability and discrimination in the performance of their difficult duties, and local Committees should do all in their power to assist them to detect the very rare cases of malingering. The Chairman also pointed out that where a difference occurred between a member and the medical certifier the matter should be brought before the Committee whose function it was to settle disputes. On no account should a member adopt any other course.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeons S. H. Facey to the *Victory*, additional, for disposal; C. S. Woodright to the *Vindicta*, Surgeons G. H. Hayes, M.B., to the *Vindicta*, additional, for disposal; H. E. Y. White to the *Pembroke*, additional, for medical transport duties, Chatham. Temporary Surgeons J. Rodwell, M.B., to the *Inflexible*, vice Murphy; W. F. Eborall and E. A. Fiddian to the *Victory*, additional, for Haslar Hospital; F. L. Duckworth to the *Pembroke*; B. J. Brewitt to the *Bellerophon*.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeons T. L. Ellis to the *Pembroke*, additional. To be Surgeon Probationers: D. E. Ross, H. S. Tretry, R. M. Cairns, J. J. R. Binnie, D. F. Yuille, D. A. Cunningham, J. A. Ross, A. M. Millar, T. A. H. Smith, C. C. Beney.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Granted temporary rank whilst commanding field ambulances:—Majors to be Lieutenant-Colonels: C. H. Turner, D.S.O., G. B. Ferguson. Captains to be Majors: A. R. Wright, E. C. Phelan, M.B., T. D. H. Robinson, M.B., A. A. Littlejohns, A. S. Williams, V. C. Honeybourne.

Temporary Captain J. C. Webb, M.B., to be temporary Major. T. M. Burn-McIndooch, M.B., F.R.C.P.E., to be temporary honorary Major whilst employed at the Smithsonian War Hospital, Greenock.

Captain J. W. Lane, M.D., to be temporary Major whilst commanding a field ambulance. Captain D. J. McLaren, M.B., from Somerset Light Infantry (T.F.), to be temporary Captain.

Temporary Lieutenants to be temporary Captains: H. W. B. Danaher, H. A. Baxter, M.B., H. F. Flood, A. Bloom, M.D., J. D. MacLennan, M.B., F.R.C.S.E., J. V. Buchanan, M.B., E. C. Williams, M.D., F.R.C.S.E., G. R. Lawless, F.R.C.S.I., J. C. Lorraines, M.B., F.R.C.S.E., A. J. Smith, M.B., W. A. Kennedy, M.D., C. C. Weeks, D. L. Tate, M.B.

Temporary Lieutenants relinquish their commissions: W. H. Croly, C. S. Palmer, J. T. Anderson, M.B., E. T. Pinhey, M.B., C. Matthews, J. B. Dawson, M.D., F.R.C.S., B. D. Crichton, M.B., J. McDi. H. Reid, M.B., J. L. Davies, M.D., V. C. Pennell, A. E. Gravello, C. P. M. Joubert, M.B., E. H. Drinkwater.

M. K. Robertson to be temporary honorary Lieutenant. C. C. Coghlan, M.B., is granted the temporary honorary rank of Lieutenant whilst serving with the Australian Voluntary Hospital.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

Major (temporary Lieutenant-Colonel) E. J. R. Eratt, M.B., Welsh Field Ambulance, to be A.A.D.M.S., Welsh Division.
Captain J. P. Edmiston, M.B., from Attached to Units other than Medical Units, to be D.A.D.M.S., West Lancashire Division.

ROYAL ARMY MEDICAL CORPS.

Southern General Hospital.—Lieutenant D. R. Dow, M.B., relinquishes his commission on account of ill health.

Wessex Casualty Clearing Station.—Captain A. Greene, M.D., F.R.C.S., from East Anglian Field Ambulance, to be Captain. Lieutenant J. Fenton, M.D., to be Captain.

South Wales Mounted Brigade Field Ambulance.—S. Child, M.B., to be Lieutenant.

London Sanitary Company.—Captain H. Beeneey relinquishes his commission on account of ill health.

South Midland Mounted Brigade Field Ambulance.—O. Cook, M.B., to be Lieutenant.

Northern General Hospital.—Captains to be Majors: O. H. Chapman, M.D., G. A. C. Shipman, M.B., B. McFarland, M.D.

East Lancashire Division Sanitary Section.—Lieutenant N. S. Golding, from London Sanitary Company, to be Lieutenant.

West Lancashire Field Ambulance.—Captain J. E. W. McFall, M.D., from T. F. Reserve, to be temporary Major; Captain F. W. K. Tough, F.R.C.S., to be temporary Major whilst in command of a field ambulance.

Lowland Field Ambulance.—Lieutenant R. Armstrong, M.B., to be Captain.

Highland Casualty Clearing Station.—To be Lieutenants: W. Alexander, M.B., A. A. McKenzie, M.B.

Attached to Units other than Medical Units.—Major W. F. Roe to be temporary Lieutenant-Colonel whilst in command of a field ambulance. Major J. E. B. Wells, from London Field Ambulance, to be Major. Captain R. Carswell, M.B., from London Field Ambulance, to be Captain. Lieutenants to be Captains: D. L. Wall, D. G. Dingwall, F. F. C. Jagger, M.B.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Resident Surgical Officer. Salary from £200 to £300 per annum and £5 laundry allowance.

BOSCOMBE: HOSPITAL FOR SICK CHILDREN.—House-Surgeon. Salary, £125 per annum.

BRIGHTON COUNTY BOROUGH ASYLUM, Hayward's Heath.—Temporary Assistant Resident Medical Officer. Salary, 25 guineas a month.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician.

CANNING TOWN WOMEN'S SETTLEMENT HOSPITAL, Plaistow, E.—Resident Medical Officer (female). Salary, £150 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—Fourth-year Student Dresser. Salary, £26 per annum.

CHESHIRE COUNTY COUNCIL.—School Medical Inspector (female). Salary, £350 per annum.

CROYDON GENERAL HOSPITAL.—House-Surgeon. Salary, £200 per annum.

DERBYSHIRE ROYAL INFIRMARY.—House-Physician and Casualty Officer. Salary, £200 per annum.

FEDERATED MALAY STATES.—Assistant Superintendent of the Government Central Lunatic Asylum. Salary, £400 per annum, rising to £600.

FEDERATED MALAY STATES GOVERNMENT.—Lady Medical Officer. Salary to commence, £350 first year and allowances.

GRAVESEND HOSPITAL.—House-Surgeon. Salary, £200 per annum.

HUDDERSFIELD ROYAL INFIRMARY.—Junior House-Surgeon. Salary, £100 per annum.

LEEDS PUBLIC DISPENSARY.—Lady Resident Medical Officer. Salary, £130.

LONDON COUNTY COUNCIL DENTAL TREATMENT CENTRE, Soho.—Anaesthetist. Salary, £25 per annum.

BY ORDER.

MATTERS REFERRED TO DIVISIONS.

British Medical Association.

Annual Representative Meeting,
London, 1916.

The Annual Representative Meeting of the Association will be held in London on Friday, July 28th, 1916, and following days as may be necessary.

PROVISIONAL AGENDA.

(NOTE.—In view of the shortage of paper, this Provisional Agenda includes only such of the items of the business of the Annual Representative Meeting as are known to require the consideration of the Divisions.)

ANNUAL REPORT OF COUNCIL.

(For Annual Report of Council, 1915-16, see page 79 of this SUPPLEMENT.)

1. Motion: That the Annual Report of Council for 1915-16, Balance Sheet and Financial Statement for 1915, and Estimate of Income and Expenditure for 1916, be received.

(A) Preliminary.

Presidentship for 1916-17.

2. Motion: That the following Recommendation of Council be adopted (paragraph 2 of Annual Report, page 79 of this SUPPLEMENT):

That Sir Thomas Clifford Allbutt, K.C.B., LL.D., be elected President of the Association.

*Remainder of Annual Report under heading
" (A) Preliminary."*

3. Motion: That the remainder of the Annual Report of Council under heading " (A) Preliminary " (paragraphs 1-4, pages 79-80) be approved.

(B) Finance.

Work of Officials and Staff.

4. Motion: That the following Recommendation of Council be adopted (paragraph 13 of Annual Report, page 86):

That the Representative Body place on record its high appreciation of the valuable services rendered by the whole of the Officials and Staff, and that they be thanked for the able way they have worked on behalf of the Association, and congratulated on the careful manner in which they have conserved during very critical times the financial interests of members of the Association.

*Remainder of Annual Report under heading
" (B) Finance."*

5. Motion: That the remainder of the Annual Report of Council under heading " (B) Finance " (paragraphs 5-15, pages 80-86) be approved.

(C) The Association and the War.

*Reappointment of Central Medical War Committee
for 1916-17.*

6. Motion: That the following Recommendation of Council be adopted (paragraph 6 (b) of Annual Report, page 93):

That the Central Medical War Committee be reappointed for 1916-17, with the same personnel as before.

*Remainder of Annual Report under heading
" (C) The Association and the War."*

7. Motion: That the remainder of the Annual Report of Council under heading " (C) The Association and the War " (paragraphs 16-64, pages 86-93) be approved.

(D) Organization.

*General Question of Grouping of Home Branches for
Election of Council: Grouping of these Branches
for Election of Council, 1917-18.*

8. Motion: That the following Recommendation A of Council be adopted (paragraph 65 of Annual Report, page 93):

That the Home Branches be grouped for election of twenty-four members of Council, 1917-18, under By-law 46 (a) in the same way as for 1916-17.

(For the 1916-17 grouping see BRITISH MEDICAL JOURNAL SUPPLEMENT, May 8th, 1915, pp. 201-2.)

* The Council has this year omitted from its report the usual grouping lists of Branches and Divisions, the reports of Branches, and the attendances at meetings of the Representative Body, Council and Committees.

Grouping of Oversea Branches for Election of Council, 1917-18.

9. **Motion:** That the following Recommendation B of Council be adopted (paragraph 66 of Annual Report, page 93):

That the Oversea Branches be grouped for election of seven members of Council, 1917-18, under By-law 46 (b) in the same way as for 1916-17, except that the new Grenada Branch be included in the Canada and West Indies Group of Branches.

(For the 1916-17 grouping of the Oversea Branches see BRITISH MEDICAL JOURNAL SUPPLEMENT, May 8th, 1915, page 202.)

Remainder of Annual Report under heading "(D) Organization."

10. **Motion:** That the remainder of the Annual Report of Council under heading "(D) Organization" (paragraphs 65-81, pages 93-4) be approved.

(E) Journal.

11. **Motion:** That the Annual Report of Council under heading "(E) Journal" (paragraphs 82-4, page 94) be approved.

(F) Science.

12. **Motion:** That the Annual Report of Council under heading "(F) Science" (paragraphs 85-6, page 94) be approved.

(G) Medical Ethics.

13. **Motion:** That the Annual Report of Council under heading "(G) Medical Ethics" (paragraphs 87-92, page 94) be approved.

(H) Medico-Political.

Medical Inspection and Treatment of School Children.

14. **Motion:** That the following Recommendation A of Council be adopted (paragraph 93 of Annual Report, page 94):

That the Representative Body approve, as the policy of the Association on medical inspection and treatment of school children, the Memorandum published in the SUPPLEMENT of May 8th, 1915 (pages 227-9).

Medical Certificates in Connection with Possible Pensions or Gratitudes to Dependents of Soldiers and Sailors Killed on Active Service.

15. **Motion:** That the following Recommendation B of Council be adopted (paragraph 94 of Annual Report, page 95):

That in connection with the giving of certificates by medical practitioners as to the degree of capacity to earn their own livelihood of dependants of deceased soldiers or sailors for the purpose of establishing their claim to pension or gratuity, it is desirable—

(i) That there should be a uniform standard of estimating disability to earn;

(ii) That the work of certification should be done by a board of practitioners, and should be paid for.

16. **Motion:** That the following Recommendation C of Council be adopted (paragraph 94 of Annual Report, page 95):

That it be urged upon the Government that the above proposal would be conducive to public economy and efficiency.

Notification of Pregnancy.

17. **Motion:** That the following Recommendation D of Council be adopted (paragraph 114 of Annual Report, page 97):

That while it is desirable to encourage prospective mothers to make early arrangements for being properly cared for during the time of pregnancy as well as at the actual time of delivery, the Association is not at present prepared to support notification of pregnancy to a public authority.

Election of Direct Representatives on General Medical Council.

18. **Motion:** That the following Recommendation E of Council be adopted (paragraph 119 of Annual Report, page 97):

That the support of the Association be given to the following candidates in the election of direct representatives on the General Medical Council at

the forthcoming election: H. W. Langley Browne, M.D., F.R.C.S.E., West Bromwich; H. A. Latimer, M.D., M.R.C.S., Tunbridge Wells; J. A. Macdonald, M.D., M.Ch., LL.D., Taunton; and T. Jenner Verrall, M.R.C.S., L.R.C.P., LL.D., Bath.

Remainder of Annual Report under heading "(H) Medico-Political."

19. **Motion:** That the remainder of the Annual Report of Council under heading "(H) Medico-Political" (paragraphs 93-119, pages 94-7) be approved.

(I) National Health Insurance.

Effects of the War on the Medical Side of the Insurance Acts.

20. **Motion:** That the following Recommendation A of Council be adopted (paragraph 122 of Annual Report, page 98):

That in view of the difficulty experienced in ascertaining the exact number of insured persons who have enlisted, and in collecting evidence as to the sickness incidence of those insured persons remaining, and considering that strong representations on the subject have already been made to the Commissioners, no further action be taken at present, but that the Council be instructed to collect what information it can on the subject in order that it may be used when any revision of the terms on which Insurance practitioners are employed is discussed.

Medical Referees under the Insurance Acts.

21. **Motion:** That the following Recommendation B of Council be adopted (paragraph 146 of Annual Report, page 100):

That pending the establishment of a permanent system of referees under the Insurance Commission, it is desirable that the Association should co-operate in the promotion of a system of temporary arrangements under suitable conditions.

22. **Motion:** That the following Recommendation C of Council be adopted (paragraph 146 of Annual Report, page 100):

That the fee of 10s. 6d. already approved by the Representative Body for examination of and report on cases submitted to part-time referees under the National Insurance Act be reaffirmed as the minimum fee for cases examined by practitioners who hold no stated appointment to the approved society submitting the case, and Divisions and Branches be allowed to approve schemes for the payment of practitioners in their areas appointed as medical referees to approved societies, provided that where such a scheme involves payment by salary or in accordance with the time occupied, or the acceptance of a fee less than 10s. 6d. per case examined, the scheme shall require the approval of the Council of the Association.

Remainder of Annual Report under heading "(I) National Health Insurance."

23. **Motion:** That the remainder of the Annual Report of Council under heading "(I) National Health Insurance" (paragraphs 120-49, pages 97-100) be approved.

(J) Public Health and Poor Law.

24. **Motion:** That the Annual Report of Council under heading "(J) Public Health and Poor Law" (paragraphs 150-2, page 100) be approved.

(K) Scotland.

25. **Motion:** That the Annual Report of Council under heading "(K) Scotland" (paragraphs 153-7, pages 100-1) be approved.

(L) Ireland.

26. **Motion:** That the Annual Report of Council under heading "(L) Ireland" (paragraphs 158-60, page 101) be approved.

(M) Oversea Branches.

27. **Motion:** That the Annual Report of Council under heading "(M) Oversea Branches" (paragraph 161, page 101) be approved.

By Order,

ALFRED COX,

Medical Secretary.

May 3rd, 1916.

British Medical Association.

(A) Preliminary.

QUESTION OF ANNUAL MEETING, 1916.

1. As the War conditions still make it impossible to hold the usual Annual Scientific Meeting, the Council has with regret found itself obliged to postpone as regards 1916 the holding of an Annual Meeting at Cambridge.

In the present exceptional circumstances the Council has arranged that the Annual Representative Meeting and Statutory General Meeting shall be held at the Connaught Rooms, London, on Friday, July 28th, the Representative Meeting to commence at 10 a.m. The Annual General Meeting will be at 2 o'clock in the afternoon.

PRESIDENTSHIP FOR 1916-17.

2. The Council recommends :

Recommendation.—That Sir Thomas Clifford Allbutt, K.C.B., LL.D., be elected President of the Association.

OBITUARY.

3. Roll of Honour.

Killed on Service.

Capt. Maurice Burnett, R.A.M.C.
 Capt. C. T. Conyngham.
 Capt. Anthony Purdon Hogarty Corley.
 Lieut.-Col. John Henry Dauber, Ex-Chairman of the Westminster Division, on board H.M.S. *Royal Edward*, torpedoed in the Aegean Sea.
 Dr. William Everett, on board ss. *Persia*, torpedoed off the coast of Crete.
 Capt. Eric Louis Giblin, R.A.M.C.
 Lieut. Bernard Bradley Gough, R.A.M.C.
 Capt. Burroughes Maurice Hughes.
 Capt. Howard Tomlin Hunter.
 Major Frederick Miller Johnson, Australian Army Medical Corps.
 Capt. Arthur Kellas, R.A.M.C. (T.F.).
 Lieut. Thomas Jones Latham, R.A.M.C.
 Capt. Keith Maurice Levi, Australian Army Medical Corps.
 Capt. John Harry Meers, R.A.M.C.

Lieut. Jeffery Wimperia Parker, R.A.M.C.
 Surgeon Frederick Whitby Quirke, R.N., on board the *Princess Irene*, torpedoed.
 Capt. Michael Foster Reaney, I.M.S.
 Capt. Walter Rowland Southall Roberts, R.A.M.C. (T.F.).
 Lieut. Kenneth Robinson, R.A.M.C.
 Capt. Francis Shingleton Smith, I.M.S.
 Lieut.-Col. Charles Ernest Thomas, V.D., New Zealand Army Medical Corps.
 Lieut. Patrick Joseph Walsh, I.M.S.
 Lieut. Peyton Tollemache Warren, R.A.M.C. (T.F.).
 Colonel Ernest Octavius Wight, R.A.M.C.
 Major James Woods, I.M.S.

Died from Wounds.

Lieut. John Clarke, R.A.M.C. (T.F.).
 Capt. Gordon Clunes McKay Mathison, of the Australian Army Medical Corps.
 Lieut. Manockji Burjorji Patel, I.M.S.
 Lieut. T. A. Peel, R.A.M.C.
 Lieut.-Col. William Bridgett Pritchard, R.A.M.C.
 Major Samuel Jabez Richards, Australian Army Medical Corps.
 Lieut. Ernest Stratford, R.A.M.C.
 Major James Craik Taylor, R.A.M.C. (T.F.).
 Capt. Andrew Wallace.

Died on Active Service.

Lieut. John Cunningham Bell, R.A.M.C.
 Capt. Gurney White Buxton, R.A.M.C. (T.F.).
 Capt. Archibald Thomson Campbell, R.A.M.C. (T.F.), late President of the Glasgow and West of Scotland Branch, Member of the Organisation Committee.
 Capt. James Fairburn Fairey, R.A.M.C.
 Lieut. Neil Murphy Gavin.
 Major Albert Hilton, R.A.M.C. (T.F.).
 Lieut. Joseph McGowan, R.A.M.C.
 Major William Aberdeine Malcolm, R.A.M.C. (T.F.).
 Major John O'Leary, I.M.S.
 Lieut. Edward Daniell Parsons, R.A.M.C.
 Capt. Peterswald Pattison, R.A.M.C.
 Lieut.-Col. Alexander Aitken Ross, R.A.M.C.
 Major Thomas Copeland Savage, of the New Zealand Army Medical Corps.
 Lieut.-Col. John Wilfred Stokes, R.A.M.C. (T.F.).
 Capt. Archibald Alfred Sutcliffe, R.A.M.C.
 Lieut. A. L. Thornley, R.A.M.C., Hon. Sec. Cardiff Division.
 Capt. Arthur Verge, Australian Army Medical Corps.

The Association also has to deplore the loss of the following members:—

Name.	Offices held in the Association.
Dr. C. Sessions Barrett	Formerly Chairman of the Leicestershire and Rutlandshire Division.
Mr. James Stanley Newton Boyd	Vice-President Section Surgery, 1913.
Dr. Thomas Bushby	President of Section of Medical Sociology at Liverpool Meeting, 1912, and Representative of the Liverpool Division.
Mr. Colin George Campbell	A former representative of the Lancashire and Cheshire Branch on the Council.
Sir Thomas Smith Clouston, M.D.	President of Section Psychology, 1886 and 1898.
Surgeon-General Sir Charles McDonagh Cuffe, K.C.B.	Member of the Naval and Military Committee; Vice-President of Section Public Medicine at Portsmouth, 1899; Vice-President and Representative of Kensington Division.
Sir Peter Ende	President of Section Medicine at Norwich Meeting, 1874.
Dr. William Thomas Edwards	President of Association at the Cardiff Meeting, 1885.
Dr. Bruce Goff	A former Member of Council and several of its Committees as well as President of the Glasgow and West of Scotland Branch.
Dr. George Allan Heron	A former Member of Council, Member of Council of Metropolitan Counties Branch and Chairman of its Finance Committee.

Name.	Offices held in the Association.
Dr. George Kirkwood...	Ex-President of the Cambridge and Huntingdon Branch.
Sir Francis Lovell, C.M.G. ...	Representative of the Trinidad Branch on the Council, 1903-05, and a Member of the Colonial Committee.
Professor Frederick Howard Marsh	President of Metropolitan Counties Branch, 1903-04; President of Section: Surgery at the Ipswich Meeting 1900.
Dr. Nicholas Percy Marsh ...	Formerly Chairman of the Liverpool Division.
*Mr. Edmund Owen ...	Chairman of Council, 1907-10; Chairman of the Constitution Committee, and Colonial Committee; Past President of the Sections Surgery, and Diseases of Children.
Professor Arthur Hamilton White	Secretary to the Leinster Branch; Secretary to the Irish Committee; Member of Council for many years.
Mr. Evan Williams ...	Late President of the North Wales Branch.

Dr. John Allan, Dr. Joseph Anderson, Dr. John J. Austin, Dr. Arthur Cajetan Baca, Dr. Fred. Bailey, Dr. William Barker Bale, Dr. Henry Charlton Bastian, F.R.S., Col Ferdinand Campion Batchelor, Dr. John Abernethy Beattie, Dr. Benjamin David Craigie Bell, Mr. Edward Bennett, Lieut.-Col. George Frederick William Braide, I.M.S., Dr. William Arthur Brailey, Dr. C. H. Bromhall, Dr. Charles Grinling Bunn, Dr. Archibald Carmichael, Dr. Edward William Scott Carmichael, Dr. George Henry Charlesworth, Mr. John Francis Cheesewright, Lieut.-Col. Letterstedt Frederick Childe, I.M.S., Mr. William Gladstone Clark, Dr. Edward A. Clarke, Mr. Charles Edward Collins, Dr. H. B. Currie, Dr. Alfred Beswick Darling, Brigade-Surgeon John Norman Davis, R.A.M.C., Mr. Archibald Robertson Douglas, Colonel Francis James Drury, I.M.S., Dr. Samuel Robert Dudley, Capt. James Johnstone Dykes, Dr. David Edwards, Deputy-Surgeon-General William Farquhar, I.M.S., Brigade-Surgeon Lieut.-Col. Joseph Fleming, R.A.M.C. (T.F.), Capt.-Ernest George Ford, R.A.M.C., Dr. Charles Henry Fox, Dr. Abraham Cross Godfrey, Lieut.-Col. William Henry Gray, I.M.S., Dr. John Greasley, Dr. William Starbuck Griffith, Lieut.-Col. William Sandilands Harrison, R.A.M.C., Colonel John Gasson Harwood, A.M.S., Dr. Pantland Hick, Lieut. Francis Gethin Hopkins, R.A.M.C., Dr. Robert Conwy Joyce, Colonel John Matthew Jones, A.M.S., Mr. Charles Lakin, Lieut.-Col. Edward Lawrie, I.M.S., Dr. David Bridge Lees, Sir John Lentaigne, Colonel Roderick Macrae, I.M.S., C.I.E., Dr. Neil McLeod, Dr. John MacRury, Dr. Samuel Macvie, Dr. Odillo Maher, Dr. Alfred Mann, Dr. George Armstrong Mason, Mr. C. S. Morrison (late President and Sec. of the Worcester and Hereford Branch), Francois Albert de Thierry Mouillot, Major George Thomas Mould, I.M.S., Dr. Brian O'Brien, Dr. George Oliver, Major Arthur Tregellés Pridham, I.M.S., Lieut.-Col. Nathaniel E. Roberts, R.A.M.C. (T.F.), Dr. Robert Barker Robson (formerly Secretary North Northumberland Division), Dr. John O. Roe, Dr. Robert John Roulston, Dr. William Omand Slater, Dr. Richard Sephton, Surgeon-General Sir Lionel Spencer, K.C.B., I.M.S., Dr. Thomas Smailes, Dr. George Walter Steeves, Dr. Charles William Thorp, Lieut.-Col. George Turner Trewhman, R.A.M.C., Dr. Thomas Underhill, Fleet-Surgeon George Alexander Waters, R.N., Dr. Alexander Welsh, Dr. Albert Westland, Mr. J. Hammond Williams.

MEDICAL BENEVOLENCE.

4. During the year 1915 amounts were collected through the Head Office for medical benevolence as follows:—

The Royal Medical Benevolent Fund ...	£568
Epsom College ...	£381
Royal Medical Benevolent Fund Society of Ireland ...	£32

The Council commends the valuable work these Societies are doing to the generous consideration of members of the Association at this time, for at no previous period have the calls upon them been so numerous and insistent.

(B) Finance.

THE FINANCIAL STATEMENT FOR THE YEAR ENDING
31ST DECEMBER, 1915.

5. The Financial Statement for the year 1915 deserves careful study, representing as it does the conditions prevailing for

a full twelve months of War, a time of much anxiety. The figures speak for themselves and call for little explanation.

THE BALANCE SHEET.

6. The outstanding liabilities and assets show but slight variation from those of a normal year. It is a matter of congratulation that the loan from the bank was reduced during the year by no less a sum than £17,500, and it is hoped that at no distant date this item will disappear entirely from the Balance Sheet. During the year, after full provision for depreciation, the Surplus Account was increased by £12,877, bringing the balance of Assets over Liabilities to £121,765.

REVENUE, OR PROFIT AND LOSS ACCOUNT.

7. The receipts from subscriptions are less by £3,645, and from Journal Account £4,679 (to which fuller reference is made later) and there is a decline in rents received. These three sources of income have not escaped the effect of the War; the total income declined by £8,489. Turning to the other side, expenditure is lower by £6,071. As to depreciation, the same provision has been made as in the previous year in respect of such item except the investments held by the Association. On December 31st, 1915, many minimum prices were still fixed. Had the nominal figures then prevailing been taken no shrinkage would have been shown, but it is doubtful whether there was then any real market. While the balance sheet was in course of preparation the Government removed the restrictions, and a real marketable price was created. Consequently your Council has considered it prudent to provide for depreciation based on prices prevailing on January 31st, 1916. This means a diminution of £1,408 in the book values. The sum is large, but the position the Association has to face is common to all holders of gilt-edged securities, and is due to the change in the earning power of capital. As already mentioned the final surplus on the year was £12,877.

GENERAL ASSOCIATION EXPENSES.

8. The interest on loan is substantially less, as also are the legal expenses, the Association having escaped during 1915 any serious litigation. Abstract A shows altogether a decrease in expenditure of £2,544.

CENTRAL MEETING EXPENSES.

9. Under this head there has been a considerable diminution of expenditure. The fact that the annual general meeting was restricted solely to business to the exclusion of all scientific work in itself meant a material saving. Most of the Standing Committees have been less active, confining themselves largely to the more urgent matters of primary importance. The work of the Insurance Acts Committee, however, has involved increased expenditure, and the activity of the Central Medical War Committee has necessitated considerable outlay, a responsibility the Association has accepted gladly in the interests of the Empire! The net result is that under this head (Abstract B) there is a diminution in expenditure of £507 as compared with the previous year.

CENTRAL PREMISES EXPENSES.

10. These expenses have increased. The charges for repairs and upkeep are higher because during the year it was necessary to overhaul the heating apparatus. Rates, taxes, insurance and electricity all show increases, while the need for insurance against air risks could not be ignored. For these reasons Abstract C shows an increase of £271.

CENTRAL PRINTING AND POSTAGES.

11. In the general printing there is a substantial reduction, not attributable to any particular head, but due to a general decrease in the output.

CENTRAL STAFF EXPENSES.

12. There is an increase under this head owing to the fact that during the year a new scheme of remuneration for the clerical staff was put into operation, in accordance with the instructions of the Representative Body and an additional assistant medical secretary came into office.

"JOURNAL" ACCOUNT.

13. The revenue in the Journal account, except for the decrease from advertisements, calls for little comment. The sales of *Secret Remedies* and *More Secret Remedies* declined and may be expected to be a diminishing source of revenue. The discounts on machining and paper are lower; less paper was consumed, and we agreed with our printers to meet

British Medical Association.

Balance Sheet 31st December, 1915.

Balance from Subscriptions for the cost of production and issue of the JOURNAL

2 873 1 4

£20,979 5 10

Having examined the Balance Sheet, dated 31st December, 1915, and Accounts with the books and vouchers of the Association, except as regards the Irish Committee Account, and having received all the information and explanations we have required, we report that the Balance Sheet is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Association according to the best of our information and the explanations given to us and as shown by the books of the Association.

We have verified the Investments of the Association on General Account and on account of the Trust Funds shown and of the Office Staff Superannuation Fund, and we have verified the possession by the Bankers of the Association of the Deeds of the Freehold Property.

EDWIN RAYNER, M.D.,
Treasurer.

GUY ELLISTON,
Financial Secretary and Business Manager.

6th April, 1916.

them in the extra expenses they had to face for machining owing to the War. The receipts for advertisements are less by £4,000, a serious shrinkage. The decision of the Association to decline to assist in relegating to civil work medical men of military age, made it illogical to accept many advertisements. The diminution on this class of advertisement alone represents something like £50 each week or £2,600 on the year. Turning to the expenditure, this has fallen in a way to balance fully the decreased revenue from advertisements. Comparing the year under review with 1913, the last complete *ante bellum* year, the *Journal* revenue is less by £5,505, while the cost of producing the *Journal* is less by £13,217, notwithstanding increased cost of labour and material. The questions of postage, labour, the make of paper as well as the difficulties of obtaining an adequate supply at anything like a reasonable price were fully reviewed in the report of the meeting of the Council reported in the Supplement to the *Journal* of 5th February last, and it is not proposed to recapitulate these facts, but the Council takes this opportunity of informing members that the supply of paper is now under Government control and is issued only against the Board of Trade certificate. The complicated problems connected with the production of the *Journal* which have arisen since the outbreak of War have so far been met successfully, and substantial economies effected. The outlook, however, is by no means clear, and calls for the exercise of caution. There is evidence that revenue from advertisements must still further diminish, and that the expenses of production in labour and material must advance, though to what extent it would be idle to attempt to prophesy.

The Council recommends:

Recommendation.—That the Representative Body place on record its high appreciation of the valuable services rendered by the whole of the Officials and Staff and that they be thanked for the able way they have worked on behalf of the Association, and congratulated on the careful manner in which they have conserved during very critical times the financial interests of members of the Association.

APPORTIONMENT OF MEMBERS' SUBSCRIPTIONS.

14. The following tables show how a Member's subscription has been apportioned towards defraying the expenses of the Association during the year ending 31st December, 1915.

CHAIRMAN.

16. The Committee appointed Mr. T. Jenner Verrall, LL.D., as its Chairman.

VICE-CHAIRMEN.

17. Mr. E. B. Turner and Dr. A. E. Shipley were appointed Vice-Chairmen.

TITLE OF COMMITTEE.

18. At its meeting on October 20th, the Committee resolved to alter its title from that of War Emergency Committee to Central Medical War Committee, as it was considered that the latter title was more comprehensive and more truly descriptive.

REFERENCE TO CENTRAL MEDICAL WAR COMMITTEE.

19. The reference given to the Committee by the Representative Body was as follows:—

Minute 37.—1. That a War Emergency Committee be appointed for the Session 1915-16.

2. That it consist of the four *ex-officio* members, four members elected by the Council from their own number, four members elected by the Representatives present in the Representative Meeting, and four other members elected in the same way who shall themselves be Representatives.

3. That it shall have power to co-opt not more than six other members representative of Universities, Colleges and other Medical Bodies.

4. That the reference to the Committee be:—To organise the Medical Profession in England, Wales and Ireland in such a way as will enable the Government to use every medical practitioner fit to serve the country in such a manner as to turn his qualifications to the best possible use; to deal with all matters affecting the medical profession arising in connection with the War; and to report to the Council.

CO-OPTION OF MEMBERS.

20. The following six members have been co-opted in accordance with the powers given to the Committee:—

Prof. Harvey Littlejohn, Dean of the Medical Faculty of Edinburgh University;

Dr. Frederick Taylor, President, Royal College of Physicians;

Sir Rickman Godlee, Bart., Ex-President, Royal College of Surgeons;

Dr. T. W. Shore, Dean of St. Bartholomew's Medical School;

Dr. Thos. Hennessy, Irish Medical Secretary and one of the Secretaries of the Irish Medical War Committee;

Dr. B. A. Richmond, Secretary, London Panel Committee;

The Editors of the *Lancet* and *B.M.J.* have also attended the meetings of the Committee by special invitation.

SECRETARIES.

21. The Committee appointed as its Secretaries, Mr. N. Bishop Harman and the Medical Secretary of the Association.

EXECUTIVE SUB-COMMITTEE.

22. It was early seen that the work of the Committee would necessitate the consideration of many matters of detail and therefore frequent meetings. An Executive Sub-Committee was accordingly appointed consisting of: Dr. C. Buttar (Chairman), Dr. T. Jenner Verrall, Mr. E. B. Turner, Colonel Galloway and the two Secretaries, to whom were later added Major Russell Coombe and Dr. B. A. Richmond.

RELATIONS WITH DIRECTOR-GENERAL, ROYAL NAVY MEDICAL SERVICE, AND THE DIRECTOR-GENERAL, ARMY MEDICAL SERVICE.

23. The relationship between Sir Alfred Keogh and the Committee has throughout been close, and the Committee is glad to know that its work has his cordial approval, and that he has more than once publicly expressed his appreciation of the assistance the Committee has been able to give him in his responsible duty of providing for the medical needs of the Army (see letter of the Director-General, published in *B.M.J.*, August 14th, 1915.) The Director-General asked that Colonel Galloway should be appointed to represent the A.M.S. on the Committee on account of his having been a member of the Army Medical Service Advisory Board and of his close touch with the medical members of the War Office staff. This was done, and the Committee has greatly benefited by Colonel Galloway's special knowledge and means of access to the War Office. Later, also at the request of the Director-General, Col. John Atkins, A.M.S., who is specially concerned in the work of Home Defence, was invited to attend all the meetings of the Committee and Sub-Committee. The Committee wishes to express its thanks to Col. Atkins for many valued services.

24. The Committee has had several interviews with the Director-General, A.M.S., at which opportunities were taken to place before him the points to which it was evident that the members of the profession generally attached the greatest importance. The Director-General also expressed his views on the future intentions of the Committee as outlined to him, and has given the Committee much valuable information as to the needs of his Department.

25. The Committee has recently met Sir Arthur May, K.C.B., Medical Director-General of the Royal Navy, and has been assured by him of his interest in and approval of the enrolment scheme. The Committee has informed Sir Arthur May that it will be glad to place at his service the machinery of the Committee for the purpose of providing him with any Medical Officers he may require, and this offer was accepted.

26. The status of the Committee has been gradually strengthened until it may now be said to be an advisory committee on matters which affect the relationship between the medical demands of His Majesty's Forces and the medical requirements of the civilian population, as well as an active recruiting agency which has been the means of securing large numbers of medical officers for the R.A.M.C. The most significant testimony to the usefulness of the Committee is to be seen in the developments that occurred after the adoption of Lord Derby's Scheme of Recruiting. The recruitment of doctors for the R.A.M.C. was left to the Committee by Lord Derby, who in a communication to the press on November 6th, 1915, approved of the operations of the Committee, and on the recommendation of the Director-General, A.M.S., agreed that the Committee should be recognised as the means of organising the medical profession with regard to military service.

27. On January 13th, 1916, the Army Council publicly announced that medical practitioners who attested under Lord Derby's scheme should enrol under the Committee's scheme and await instructions from the Committee. Special privileges have been given to medical practitioners who come within the provisions of the Military Service Act, if they have enrolled with the Committee. The position of the Committee has been further strengthened during the last three months by the issue by the War Office of certain communications to the press officially recognising the Enrolment Scheme of the Committee. The latest War Office announcement published through the Press Bureau on April 2nd, 1916, was as follows:—

In order to maintain the supply of medical officers required to meet the needs of the military services, it is urgently necessary, in the interests of the civil community no less than of our armies, that all qualified medical men not exceeding 45 years of age, irrespective of their circumstances, should without delay enter their names under the enrolment scheme which has been established by the Central Medical War Committee and has the authorisation of the War Office.

The work of enrolment is carried out by three representative bodies of the medical profession, known as the Central Medical War Committee for England and Wales, the Scottish Medical Service Emergency Committee, and the Irish Medical War Committee. It should be understood that enrolment does not mean that the medical man is at once called up for service in the R.A.M.C.; he may never be called, and in any case will not be called up until the proper time has come for his services to be accepted. The real purpose of the scheme is to secure that those doctors are selected for military purposes who can best be spared at the particular date, and from the particular place, with due regard to the needs of the civil population, to the personal circumstances of the doctor, and to the requirements of the armies.

To carry out efficiently the comparative process necessary for an equitable distribution of the civil population, it is evident that all doctors of suitable age should have offered themselves for service quite irrespective of their particular circumstances, whatever these may be, so that a proper selection may be made by a body equipped with the requisite information from all parts of the country, and thus competent to make the necessary comparisons. The only alternatives are haphazard recruitment and arbitrary demand.

It is for these reasons that the War Office has officially recognised and now relies upon the Central Medical War Committee and the corresponding committees in Scotland and Ireland. These committees include representatives of the Royal Colleges of Physicians and the Royal Colleges of Surgeons, of the universities and medical schools, and of the British Medical Association, and have associated with themselves in their work representatives of the Government departments mainly concerned.

The committees have an organisation of representative local committees in all parts of the three countries, from which they obtain local information and advice, and they work in daily contact with the various Government departments concerned.

Furthermore, for the purpose of considering and advising, through the Central Committee, on cases in England and Wales having such special features as exist, for instance, in regard to the staffs of the Metropolitan Hospitals, a Committee of Reference has, with the approval of the War Office, been now established by the Royal College of Physicians of London and the Royal College of Surgeons of England, acting jointly.

Thus it will be seen that, in order to secure the desired result, that is to say, to obtain the medical officers needed for the Army month by month, with the least possible interference with the needs of the civil population and the least possible injury to the individual practitioner, it is necessary that every medical man under the age of 45, who does not hold a certificate of enrolment (or of provisional acceptance by the War Office), should enrol at once. Only in this way can the exigencies of the situation be fairly and efficiently met.

LOCAL MEDICAL WAR COMMITTEES.

28. The Committee early realised that its efforts must prove unavailing unless supported by local organisation. Accordingly the Divisions were urged to call meetings of the local profession in their areas and to secure the appointment of a Local Medical War Committee representing all sections of the profession and both members and non-members of the Association. The response has been very good, and there are now Committees in each of the 172 areas in England and Wales. It is impossible to speak too highly of the arduous work and self-sacrifice that have been devoted to the organisation and conduct of many of these Committees, and the Committee has specially to thank the gentlemen who by acting as Chairmen and Hon. Secretaries have enabled the Central Committee to establish a network of Committees which have carried on the recruiting work for officers for the R.A.M.C. and have enabled some thousands of medical men to join the Services knowing that their interests during their absence will so far as possible be protected.

The work of these local Committees has been

- (a) To disseminate among the local practitioners, the plans of the Central Committee and the requirements of the Services.
- (b) To canvass for medical officers for the Services.
- (c) To arrange for the conduct and protection of the practices of the men who join the Services.
- (d) To assist the local military authorities in supplying, when required, civilian practitioners for military work.
- (e) To advise the Central Committee as to how far the local profession could safely be further drawn upon for the Services, having due regard to the medical needs of the civilian population.

These points must be dealt with in some detail in order that the medical profession may understand the exceedingly important functions that the Local Committees have gradually been called upon to fulfil.

(a) and (b) Dissemination of the Plans of the Central Committee; Canvassing for Medical Officers.

29. Various circulars have been issued dealing with these subjects. In the earlier months of the Central Committee's existence the plan adopted was to urge every area to do its utmost to spare as many men as possible, and a rough calculation was made of the capacity of each area for supplying officers, based on the proportion the local medical population before the War bore to the total number of medical officers required at that time. This quota was indicated as the number of medical officers that each area should strive to obtain, and the method, rough and ready as it was, served the purpose of giving the area something definite to work to. But it soon became apparent that this method needed to be modified, as it was capable of causing injustice by asking for too few from some areas and too many from others. Accordingly the quota principle has been allowed to fall into abeyance.

30. The Committee was gradually led to adopt the plan of enrolment of *all* medical men of military age for general service at home and abroad (40 years for the Navy and 45 for the Army in the case of the medical profession) and classification of these men into groups based on the ease with which generally speaking they could be spared from any locality. This system was described in Circular W. 12 issued to the Local Committees on December 14th, and published in the *Lancet* and *B.M.J.* of December 18th. The enrolment plan may be summarised as follows.—

(1) Every medical man of military age has been asked to enrol himself, that is to fill up an application for a Commission, and place it in the hands of the Committee giving it written authority to send it in to the Admiralty or War Office when in the opinion of the Committee the time has come when the individual in question should offer his services as a commissioned medical officer.

(2) He then receives a numbered Certificate of Enrolment.

(3) He is to receive not less than one month's notice of the intention to call him up.

(4) He has full opportunities of stating all his difficulties in leaving his practice, and is promised that these will receive consideration at the hands of the Local and Central Committees.

(5) He is promised that no call will be made without the Local Committee being consulted as to whether he can go and ought to be allowed to go.

(6) He is informed that enrolment does not mean that all the men enrolled will be called up—indeed it is made plain that in some districts few, and in other districts no men can be allowed to leave, at any rate until it has become imperatively necessary to lower the standard of medical attendance on the civilian population, and until every effort has been made to secure the services of men in areas where it is known there is a surplus of practitioners.

31. The similarity of the scheme to the Lord Derby system of attestation, and consideration later of the special circumstances of those who appeal will be noted, and the Director-General and the Army Medical Council by their latest announcements have indicated that they regard the scheme as the equivalent for the medical profession of the Lord Derby scheme for the rest of the male community of military age.

32. The Committee has found many misapprehensions regarding this scheme, and felt it necessary to call together Conferences of representatives of the Local Medical War Committees in order that these difficulties should be discussed. Accordingly Conferences were held at Leeds, March 21st, London, March 22nd, Birmingham, March 23rd, and Bristol, March 24th, at which representatives of the Central Committee attended in order to explain the scheme and secure the support of the Local Committees for it. The meetings were well attended and were, the Committee believes, very useful.

33. The Committee has given an undertaking not to proceed to call up practitioners under the Enrolment Scheme unless and until 75 per cent. of those medical men in England and Wales who on January 5th, 1916, were of military age, and did not hold a commission have enrolled, or have since that date received a commission in His Majesty's Forces or a letter of provisional acceptance from the War Office.

34. The Committee is glad to report that it has had much help from various Government Departments in its work of recruiting medical officers, and later in its enrolment campaign. The Local Government Board, Board of Education, National Health Insurance Commissioners and the Board of Control have assured the Committee of their full support so far as this is consonant with the public interests that these Departments specially serve.

35. The Local Government Board and the Insurance Commissioners especially have given valuable help, and the Local Government Board has issued a circular to the local authorities with which it is concerned asking them to send in a return of the medical officers they employ classified in accordance with the possibility of their being released for military service either at once, later on, or not at all. The circular also urged all the eligible medical officers to enrol with the Committee whether they think they can be spared or not.

Armet for Men who have Enrolled.

36. The Committee has asked the Director-General, A.M.S., whether a distinctive armet could be supplied to men who have enrolled. The matter is under official consideration.

(c) Arrangements for the Conduct and Protection of the Practices of Men who join the Services.

37. The Committee issued (Circular W 3) a general statement as to arrangements that might be made to minimise as far as possible the loss which must inevitably fall on most established practitioners who join the Services. The response was exceedingly satisfactory and reflected infinite credit on the *esprit de corps* and organising faculty of the profession at large. Many Local Committees have made arrangements of a very detailed character and have taken much trouble in dealing with difficult cases. Great difficulties however exist as regards the protection of the goodwill of practices in certain districts, and this applies especially in London, where the population is of a floating character and patients are not attached so firmly to practices as they are in most other parts of the Kingdom and more especially in the country districts.

38. The Committee had reason to believe that in a few cases practitioners were seeking to take advantage of the absence on Service of their colleagues. The attention of the President of the General Medical Council was called to the matter and in his address to that body at the November Session he indicated that the Council would take a very serious view of any case brought before it in which such unpatriotic and unprofessional conduct was proved. The Committee has informed the Local Committees that the British Medical Association will be prepared to bring any well attested case before the General Medical Council.

39. The Committee issued to the Press on September 23rd, 1915, a letter calling the attention of the public to the fact that they could do much to assist the profession in its efforts to protect the interests of absent practitioners, by refusing to change their doctor if he had responded to the call of the country, and by making known to any practitioner they consult during the absence of their own doctor that they intend to revert to the latter on his return. The Local Committees were urged to make use of the local Press to make a similar appeal and this has been done in many areas.

40. In this connection should be mentioned a scheme which the Committee has under consideration for the establishment of an Emergency Corps of medical men who would be prepared to place themselves at the disposal of the Committee for temporary service in any area in which the local practitioners were hard pressed by the outbreak of an epidemic. The L.G.B. and N.H.I. Commission have been consulted in regard to the proposal, which is receiving official consideration. The scheme as submitted to these Departments is as follows:—

SCHEME FOR THE FORMATION OF A CIVIL EMERGENCY CORPS TO MEET THE EXIGENCIES OF THE WAR CONDITIONS IN HOME PRACTICE.

I.—PREMISES:—

1. The evidence in the possession of the Central Medical War Committee shows that the number of medical practitioners in industrial areas under the ordinary conditions of peace is no more than is reasonably necessary to carry on the average work of those areas.
2. The most carefully graded reduction of the number of practitioners in each area will not safeguard the civil population against the dangers of lack of medical attendance in the event of a serious epidemic of disease.
3. To reduce the risk of any serious disorder arising out of such conditions extraordinary measures are needed, for the customary resource of periods of stress—temporary assistants—is lacking in war time.

II.—SCHEME:—

The organisation of a corps of medical practitioners ready to take emergency duty in any part of the country at short notice.

1. Basis of number of men required to be made on the ascertained reduction of the number of medical men in four large towns. Say 200. It is suggested that the contingency to be met under this scheme should not exceed the measure of difficulty arising in four such towns simultaneously.

2. *Eligibility for Service.*—The volunteers must be aged from 45 to 55 years. They must not be engaged in military duty. They must be or have been engaged in town practice, but not practising in any town where the civil practice is carried on with difficulty. They should not be engaged in panel practice, or if so engaged, their panel should be nominal. Selection shall be made by the Local Medical War Committees and the lists rendered to the central office for the final selection according to the geographical distribution to be arranged for the corps.

3. *Liability of volunteers.*—Each man accepted for service shall be liable for transfer to any affected area on due requisition and at 24 hours notice for a period not exceeding one month in any three months, but not for two consecutive months unless with his consent.

4. *Pay.*—Each man accepted for service shall be paid a retaining fee of twenty-five guineas for each year of his liability. When on service he shall receive the current fees of a locum tenens, say seven guineas a week, with board and travelling expenses.

III.—LOCAL ARRANGEMENTS:—

1. *At places of domicile of the volunteers.*—Each man accepted for service shall arrange for the work of his own practice to be carried on by two of his neighbours, one as first reserve, the other as second reserve. The names of these reserves shall be registered at the central office. The volunteer shall make his own arrangements for the payment of these reserves; but it is suggested that the scale of division of fees issued by the Committee for men on war service might be taken as a guide.

2. *In the affected areas.*—All industrial districts where the medical men engaged in general practice have been reduced by 20 per cent. or more below the average by the withdrawal of men from the district for war service, or below an adjusted average by the emigration of population on munition work, shall be registered at the central office.

3. On a call signed by not less than three medical men in an affected area and countersigned by some representative practitioner of the area, say the Chairman of the Local Medical War Committee, volunteer practitioners to the number required shall be notified to be ready for service within 24 hours at the place indicated.

4. The volunteer practitioner shall be billeted by the doctor requiring his services. During his period of service he shall act as partner or assistant to the local doctor, and carry on with him the full work of his practice whether of the general population or of insured patients.

5. The practitioners of the affected area requisitioning volunteer assistance shall be liable for the payment of the locum fees and the travelling expenses of the volunteer.

IV.—CENTRAL ARRANGEMENTS:—

A central committee shall be formed for the purpose of co-ordinating the working of the scheme. This Committee shall be either appointed *ad hoc* or be a sub-committee of the Central Medical War Committee. The special committee shall consist of equal numbers of members of the profession and of those authorities who shall agree to bear the responsibility for financing the arrangements.

The cost of the scheme, which would simply be the retaining fees, amounting to £5,250 per annum, should be borne in equal proportions by the Local Government Board and the National Health Insurance Commissioners.

(d) Assistance of Local Committees in supplying, when required, Civilian Practitioners for Military Work.

41. Up to the present time the Local Committees have not been called upon to assist the military authorities much in this way, though in a few areas the military authorities have utilised the Committees extensively. This matter was discussed at an interview with the Director-General and he stated that many more demands for this kind of assistance are likely to be made as the war progresses and more and more commissioned medical officers are taken out of the country. He asked for a list of all the Secretaries of the Local Committees and has circulated it to the Deputy Directors of Medical Services of the various Commands, instructing them to make use of the Local Committees in any matters in which the services of these bodies might be profitably used.

42. The Army Council has also issued an instruction that medical practitioners of military age who have not enrolled

shall not be given part-time employment with troops. This will of course greatly assist the Local Committees in their canvass for enrolments.

- (c) *Advising the Central Committee as to how far the local profession could safely be drawn upon for the Services, having due regard to the medical needs of the Civilian Population.*

43. This aspect of the work of both Central and Local Committees has naturally assumed greater importance in the past few months, as it has become evident that the capacity of some areas for sparing more practitioners was becoming seriously strained. On this subject the National Health Insurance Commissioners approached the Committee on October 6th, 1915, when the Chairman of the Joint Committee, Mr. C. H. Roberts, M.P., together with Sir Robert Morant, K.C.B., Mr. J. Smith Whitaker, and Mr. Anderson (Secretary of the English Commission) attended the meeting of the Committee by invitation. The Deputation exhibited anxiety as to the risk of serious depletion of practitioners in some areas, and inquired what the Committee was doing to prevent this and to ensure that other areas where there was a surplus of doctors would be drawn on more freely. Since that time the subject has been discussed on many occasions with representatives of the Commission, who have shown a great desire to assist the Committee in this part of its work, and have supplied the Committee with valuable statistics showing the proportion of general practitioners to population in the various administrative areas of England and Wales.

44. It was at length decided that the only way to secure that the population in no area should be unduly depleted of medical men was to ask the Director-General A.M.S., to submit every application for a Commission in the R.A.M.C. to the Committee, which should then make such inquiries as were necessary to satisfy itself whether or not any given practitioner could safely be spared and whether adequate arrangements had been made for the conduct of his practice during his absence. Such inquiries involve a great deal of work and much consultation with the Local Committees, Insurance Commissioners, and sometimes other Government Departments, but the Committee is satisfied that it is the only way to avoid serious difficulties due to over-depletion. The Director-General A.M.S., at once consented to grant no Commission in England and Wales without submitting the application to the Committee.

45. Further, the Committee issued on December 14th, 1915, to the Local Medical War Committees Circular W. 13 in which this aspect of the medical recruiting question was fully dealt with, and the responsibilities of the Local Committees as advisers of the Central Committee and through it of the War Office were emphasised. The Commissioners also issued a letter to the Insurance Committees urging them to take steps to ensure that no panel practitioner will be allowed to leave his insurance practice until definite arrangements have been made for its conduct during his absence. The Commissioners also circulated, along with their own Memorandum, a copy of the Committee's Circular W. 13.

46. In order that the Committee might be in a position to take full advantage of the co-operation and expert advice which the two Government Departments chiefly concerned in the provision of medical attendance are so willing to give, the Committee asked the N.H.I. Commission and the L.G.B., each to appoint representatives who would attend each meeting of the Committee and Sub-Committee, though without voting powers. Sir R. Morant, K.C.B., and Mr. Smith Whitaker have acted in this capacity for the Commissioners and Mr. H. O. Stutchbury and Dr. S. W. Wheaton for the L.G.B.

COMMUNICATIONS WITH HOSPITALS.

47. The Committee has on two occasions addressed Circulars to the Governing Bodies and Medical Staffs of the Voluntary Hospitals throughout the country, one on September 11th, 1915, and the other on January 10th, 1916 (W. 14), urging them to do what they could to make such arrangements as would allow the members of their resident and honorary staffs to place themselves at the disposal of the Military Authorities. Information was given as to the means devised by certain hospitals to meet the difficulties caused by shortage of staff, and the Committee has good reason to believe that these circulars have been found useful. The Committee received an important deputation from the hospitals of Manchester and discussed with it the difficulties which those bodies were finding in staffing their hospitals and was assured by the deputation that the interview had been of great use to it.

SPECIAL POSITION OF METROPOLITAN HOSPITALS AND HOSPITAL STAFFS.

48. It was intimated to the Committee that the Central Tribunal was of opinion that the necessities of hospitals and their staffs, especially in London, should be dealt with by a Committee of the two Royal Colleges. The Committee therefore approached the Royal College of Physicians, London, and the Royal College of Surgeons of England, who consented to form a joint Advisory Committee (now known as the Committee of Reference) to consider the minimum necessity of the several Metropolitan Hospitals and Medical Schools during the war in respect of medical men on their staffs (including the residential and teaching staffs), to advise the Government Departments concerned through the Central Medical War Committee in any case within this category in respect of which the question arises as to whether a particular individual is indispensable or would suffer excessive personal hardship if required to enter into military service, and further to advise the C.M.W.C. on the case of any other medical man in England and Wales in respect of whom the C.M.W.C. or the Central Tribunal under the Military Service Act, 1916, thinks it advisable that its advice should be sought, such advice to be communicated through the C.M.W.C. without alteration to the Government Department concerned.

49. The following are the members of the Committee of Reference:—

Representatives of Royal College of Physicians, London:—

Dr. Frederick Taylor, President.
Lieut.-Col. W. Pasteur.
Major Sidney Martin.
Colonel James Galloway.
With power to co-opt two others.

Representatives of Royal College of Surgeons, England:—

Surg.-Gen. Sir W. Watson Cheyne, Bt., K.C.M.G., C.B.,
President, for whom when absent Sir Rickman J.
Godlee, Bt., K.C.V.O., is deputed to act.
Lieut.-Col. William F. Haslam.
Lieut.-Col. D'Arcy Power.
Mr. Charles Ryall.
With power to co-opt two others.

Secretary to the Committee:—

Mr. Frederic G. Hallett.

The Committee confidently anticipates that the advice of the Committee of Reference will be exceedingly valuable.

SCOTLAND AND IRELAND.

50. The reference of the Committee included the power of dealing with Ireland so far as the organisation of the medical profession for military purposes was concerned. The Committee however came to the conclusion that it would be better if a Committee were specially constituted for Ireland somewhat on the lines of the Scottish Medical Service Emergency Committee, and this suggestion was conveyed to the Irish Medical Secretary B.M.A. An Irish Medical War Committee has been established composed of representatives of the various Irish medical teaching bodies and of the Local Government Board, concerning which fuller information will be found under the head of Ireland in the Report of Council. *The C.M.W.C. has co-opted as a member Dr. T. Hennessy, who is Assistant Secretary to the Irish Medical War Committee. Similarly Prof. Harvey Littlejohn, of the Scottish Medical Service Emergency Committee, has been co-opted. In this way the three Committees are kept in touch.

TERRITORIAL MEDICAL SERVICE.

51. The Committee has continued the representations which were made by the Committee of Chairmen of Committees of the Association to the Director-General as to the disadvantages under which the Territorial Medical Officer laboured as compared with the Temporary Lieutenant R.A.M.C. As a result the authorities announced that as from April 1915 last all Special Reserve and T.F. Lieutenants would be promoted Captains after six months' service. This promotion carries with it increase in pay, and it did much to allay the dissatisfaction felt by junior Territorial Medical Officers. The Committee acting in consultation with the Naval and Military Committee of the Association did not fail however to point out that as regards pay the Territorial Captain was still in an inferior position as compared with the Temporary Lieutenant R.A.M.C., and in a War Office letter dated October 17th, 1915,

it was announced that all Territorial Medical Officers accepting general service will be entitled to certain gratuities which will make their pecuniary position practically equal to that of the Temporary Officer. The Committee, on the advice of the Naval and Military Committee, informed the War Office that it held that the grant of these gratuities was no new concession, but was a right to which Territorial Officers were clearly entitled under par. 497 of the Royal Pay Warrant. The Committee again informed the War Office that in its opinion the slight disparity still existing between the pay of Territorial and Temporary R.A.M.C. officers should be removed, and also expressed its opinion that the disadvantages under which Territorial Medical Officers laboured (pay, and duration of service for period of War, as compared with the one year contract of the Temporary Officer), accounted for the undoubted difficulties experienced by Territorial units in obtaining medical officers. The reply from the War Office simply recapitulated the improvements already made in the position of the junior Territorial Medical Officer, and did not indicate any prospect of further concessions being made.

PENSIONS FOR NAVAL AND MILITARY MEDICAL OFFICERS.

52. In response to numerous enquiries, it has been definitely ascertained that Temporary Naval and R.A.M.C. Officers are treated as regards pensions in exactly the same way as the permanent officers, with the exception of certain pensions which depend on length and permanency of service.

53. In the 3rd Special Report of the Select Committee on Naval and Military Services (Pensions and Grants), the probability of improved pensions was held out to "Officers holding Combatant Commissions." The question was at once raised with the Director-General A.M.S. as to whether this included Medical Officers, and he informed the Committee, after inquiry, that it did not. Sir Alfred Keogh has promised to give this matter his personal attention, and the Committee is given to understand that the claim of Medical Officers to be treated exactly the same as Combatant Officers will most probably be conceded.

MEDICAL STUDENTS AND RECRUITING.

54. The question of the position of medical students in relation to Lord Derby's Scheme was considered several times by the Committee and considerable diversity of opinion was shown as to whether the authorities should be advised to restrain medical students from enlisting or to encourage them to do so. It was evident that whatever compunction might be felt as to allowing the ranks of future medical practitioners to be depleted by the enlistment of medical students it would be difficult, if not impossible, to restrain these young men from offering themselves for military service when they found that practically all the young men of their acquaintance were enlisting. Moreover it was pointed out by the military authorities that junior medical students were just of the age and type of men who might be expected to make efficient combatant officers. The Committee however attempted to secure a compromise and informed the Director-General that it would be advisable, if possible, to utilise medical students as far as possible in the R.A.M.C., and suggested that Commissions as Second Lieutenants or Surgeon Probationers in the R.A.M.C. might be offered to third year medical students. The proposition was not accepted by the authorities. Further representations were made with the view of preventing the entrance into combatant military service of third year medical students, that is to say, all men who have passed all their examinations in Anatomy and Physiology but have not commenced their fourth year of study. The present position of the Authorities was laid down in the following notice sent to the Committee and to the Press on November 24th, 1915:—

"Students who at or before the close of the present winter session will be qualified for entry to one of the examinations for the third year students in medicine, and duly enter for the examination for which they are now studying, will not be attested until after its conclusion, and if they are successful will be included in the class of fourth year men under Lord Derby's scheme."

The fourth and fifth year students were not encouraged to attest, but to continue their studies with a view to qualification and entrance into the R.A.M.C. as officers.

MEN OF MILITARY AGE EMPLOYED ON HOME SERVICE.

55. Considerable difficulties have arisen in regard to the position of practitioners who are under 45 years of age, and who have been employed on Home Service only. The Director-General was informed that many representations had been received by the Committee to the effect that the presence of these young men in home posts was seriously detrimental to recruiting for the R.A.M.C., as men in busy practices refused to believe that there was any urgent demand for Officers so long as the Military Authorities could afford to employ these young men at home. The Director-General at once promised to remove this difficulty so far as he could, but pointed out that a great part of it was due to the fact that most of the men concerned were employed in Territorial Hospitals over which he had not at that time complete control. In August last the Director-General was requested by the Committee "to give instructions to D.D.M.S.s and A.D.M.S.s not to retain or accept for work in military hospitals at home, medical practitioners of military age who were physically fit, but that they should encourage these practitioners to accept Commissions in the R.A.M.C.;" also that the same principle should apply to those practitioners who have signed the Imperial Service Declaration and who are at present at work in Red Cross and V.A.D. Hospitals. To this the following reply was sent on September 3rd, 1915;

"I am directed by Sir Alfred Keogh to inform you that the following policy will be adopted with regard to the engagement of medical men as temporarily commissioned officers in the R.A.M.C. :—

(1) No man under 45 years of age will be employed unless he undertakes general service obligations for a year, and is found to be physically fit for duty at home and abroad.

(2) No man over 55 years of age will be accepted for home service.

(3) No man under 45 years of age will be re-engaged after the expiration of his first contract unless he offers for general service.

I am to say that it is hoped that these restrictions will facilitate the work of the War Emergency Committee in setting free men of military age and providing for the older practitioners to look after their interests during their absence.

It will be noticed that the age for general service has been advanced by five years and that the age for home service only has been reduced by the same period."

It will be observed that nothing was said in the communication sent by the Committee as regards men who were not physically fit, but the War Office notified subsequently the exclusion from home service of all men of under 45 who are not physically fit for either home or general service, and this gave rise to dissatisfaction. Some of the men concerned who have held Commissions and who have been refused extension of them at the end of the year have blamed the Committee for this exclusion, but the Committee has pointed out that the action of the War Office was decided on departmental grounds and not at the request of the Committee, and that the Committee did in fact seek from the Director-General the re-employment of such men, and that therefore the Committee cannot be held responsible for the contracts not having been renewed.

QUESTION OF MORE ECONOMICAL USE OF MEDICAL MEN IN MILITARY SERVICE.

56. The Committee has been met in its recruiting efforts by widespread and repeated complaints that more medical officers are already in military service than are required for the needs of the service, and many instances have been given to show that military hospitals and military units in many places are overstaffed. This question has been very earnestly considered by the Committee and has been the subject of many representations to the Director-General, A.M.S., both by deputation and through Colonel Galloway. While the Committee believes that individual instances of wastage may be proved, it has been convinced by its communications with the Director-General that on the whole these complaints are due to ignorance of the larger questions of Army medical administration. In the first place, as regards the alleged overstaffing at the Front, the necessity for having ample reserves must not be overlooked. At present on the Western Front we are going through a period of what may be termed siege warfare, and no doubt in some quarters and at some times medical officers

are not used to the extent that they would be if the nature of the warfare were different. But the Army medical service must be manned for forward movements, and the Director-General has assured the Committee that the personnel has been fixed with due regard to many years of experience both in our Army and in other Armies. The Committee feels that after all the responsibility must rest upon the military authorities, who would be blamed if at any given time it were found that there were not sufficient medical officers, and the Committee does not consider that it is wise or patriotic to question the decision of the military authorities, arrived at, as the Committee has good reason to know, after full consideration of the criticisms that have been offered.

57. The same considerations apply more or less to medical officers on home service. At present there are many men engaged at home who when the character of the warfare changes will be wanted at one of the Fronts, and it is unreasonable to criticise the military authorities for employing these men at home in some capacity, even though they may not be fully employed, pending their being wanted more urgently elsewhere. Here again the necessity for having ample reserves must be emphasised, and the Committee cannot take the responsibility of urging the military authorities to refrain from recruiting medical officers that the Authorities feel sure they will require, probably in the near future, merely because at the moment they cannot fully employ them. If it be said that in view of civilian difficulties practitioners should not be urged to join the Army until it is known that they are urgently required, the reply is twofold. First, that medical, like other officers, are all the better for some preliminary military training and for the physical training and open-air life they get previous to their being required at the Front; and, secondly, that the Committee believes that if its enrolment scheme is a success and the Director-General is assured of a steady supply of medical officers as and when required, the calling away of more medical men from civilian practice to military life will be deferred as long as the military authorities feel it wise to do so.

58. In view of these considerations the Committee has felt it to be its duty not to encourage these criticisms and to ask the critics to trust the Director-General, who has shown every disposition to meet legitimate criticisms and to give full weight to the necessities of the civilian population. The military authorities must be trusted not to ask for more medical men than they feel to be absolutely necessary in the interests, either immediate or more remote, of the Army. In the meantime the Committee will continue to place before the Director-General all such criticisms as it believes to be legitimate and which have not already been fully answered by him.

ADVERTISEMENTS IN THE "BRITISH MEDICAL JOURNAL."

59. Certain cases were brought to the notice of the Committee which suggested the advisability of some censorship of advertisements offering posts which were likely to attract to civil practice medical men who ought obviously to be in the Navy or R.A.M.C. The Committee realised that it had no authority in this matter, but as it had the advantage of the presence of the Chairman of the Journal Committee and the Treasurer of the Association the matters were referred to them, with the result that so far as possible no advertisement is allowed to appear in the *Journal* which would probably, if published, result in relegating to civil practice a practitioner who should be serving with the Colours. This is all the more satisfactory inasmuch as this action was taken previous to the severe criticism expressed in the House of Commons by the Under Secretary for War as regards those newspapers which inserted advertisements of the kind just mentioned.

The proprietors of the *Lancet* and *Medical Officer* are also co-operating in this matter.

ROYAL NAVAL VOLUNTEER RESERVE.

60. Representations were made to the Committee on behalf of certain Surgeons in the R.N.V.R. who felt aggrieved that although they had received their commissions in peace time and had done their utmost to qualify for service before the War, their rank was the same as that of the Temporary Surgeons who had been appointed since the commencement of the War. The whole subject was very carefully considered with the help of the representative of the Navy Medical Service on the Council, and enquiries were made of the Medical Director-General Royal Navy, but it was not found possible to arrive at any solution of the difficulty which was

acceptable on the one hand to the Surgeons R.N.V.R. and on the other hand to the Director-General.

QUESTION OF FUND FOR HELPING PRACTITIONERS WHO HAVE BEEN ON SERVICE.

61. The Committee has given consideration to the following resolution of the Representative Meeting, referred to it by the Council:—

Minute 39—Resolved: That the Representative Meeting requests the Council to consider the advisability of raising a Medical Fund for the purpose of helping those practitioners who have been serving their country as medical officers of the Army and Navy and also of helping the dependants of such practitioners, if necessary, and gives the Council power to act.

The Committee does not feel that it possesses sufficient information on the subject to advise definitely in favour of the establishment of such a fund, but has reported to the Council its opinion that such a fund may be necessary and, with a view of assisting the Council in deciding whether it will take action has submitted for the information of the Council a memorandum on the subject, which has been referred by the Council to the appropriate Committees for further consideration and report.

OTHER REFERENCES FROM THE COUNCIL.

62. The following resolutions of the Representative Body were referred to the Committee by the Chairmen of Representative Meetings and Council:—

References from Annual Representative Meeting.

Minute 32.—Resolved: That the Council take every step possible in order to obtain favourable consideration by the Government of the question dealt with in para. 9 (Supp., July 3rd, p. 8) of communication sent to the Director-General, Army Medical Service, dated 26th May, 1915.

(para 9 above referred to): Financial considerations.

9. Very many representations have been made to the Committee to the effect that practitioners who would have been glad to offer themselves for commissions are unable to do so on account of their financial commitments as regards their practices or their families. In the case of the younger practitioners who are not established in practice the remuneration offered by the War Office is probably sufficient to protect them from any financial loss, but the case is quite otherwise as regards the men who have been for some years established in practice. Many suggestions have been made to the Committee on this point which have resolved themselves into proposals either to raise the remuneration or to increase the gratuity at the end of service. On this subject Colonel Blenkinsop placed before the Committee certain considerations which have led it to the conclusion that it cannot at the present moment press either of the above-mentioned suggestions. But the Committee feels that it must place on record its conviction that financial considerations of very varied kinds are preventing many experienced practitioners from offering their services to the War Office, and that an increase in the remuneration offered to such practitioners would be justifiable, and will be necessary if it is really desired to secure their services. The Committee believes that if the Government could see its way to grant extra pay or gratuity to cover what to many practitioners would be a considerable loss of income or capital, such action would to a considerable extent solve the present difficulty of securing medical officers.

Minute 33.—The following Rider by Dr. Major Greenwood, seconded by Mr. J. V. C. Denning, was withdrawn, the Chairman having undertaken that it should be considered by the Council and referred to the appropriate Committee:—

(1) That in all cases where military duties are discharged by institutional Medical Officers, the salaries paid to such officers should, if giving whole-time service, be on a scale not less than that paid by the War Office to members of the R.A.M.C.

(2) That where the duties are part-time only, an addition should be made to the Medical Officer's salary in proportion to the extra labour involved.

Financial Considerations.

63. As regards Minute 32 of the A.R.M., the Committee is of opinion that no further action could usefully be taken in this matter.

Institutional Officers in charge of Military Hospitals.

64 (a). The subject matter of Minute 33 was brought to the notice of the War Office, who did not see their way to take any action.

REAPPOINTMENT OF CENTRAL MEDICAL WAR COMMITTEE FOR 1916-17.

64 (b). The Council recommends:

Recommendation.—That the Central Medical War Committee be reappointed for 1916-17 with the same personnel as for 1915-16.

(D) Organisation.

GENERAL QUESTION OF GROUPING OF HOME BRANCHES FOR ELECTION OF COUNCIL: GROUPING OF THESE BRANCHES FOR ELECTION OF COUNCIL 1917-18.

65. The proposal approved by the A.R.M. 1915 for reconsideration of the general question of the grouping of the members of the Association in the United Kingdom for representation on the Council is receiving the attention of the Council. In the opinion of the Council the present time is not opportune for attempting to make important and, as experience has shown, highly contentious changes in the method of election of the Council.

The Council recommends:

Recommendation A.—That the Home Branches be grouped for election of 24 members of Council, 1917-18, under By-law 46 (a) in the same way as for 1916-17.

(For the 1916-17 grouping see *B.M.J.* Supplement, May 8th, 1915, pp. 201-2*)

GROUPING OF OVERSEA BRANCHES FOR ELECTION OF COUNCIL 1917-18.

66. The Council recommends:

Recommendation B.—That the Oversea Branches be grouped for election of 7 members of Council, 1917-18, under By-law 46 (b) in the same way as for 1916-17, except that the new Grenada Branch be included in the Canada and West Indies Group of Branches.

(For the 1916-17 grouping of the Oversea Branches see *B.M.J.* Supplement, May 8th, 1915, p. 202.)

REPRESENTATION IN REPRESENTATIVE BODY, 1916-17.

(a) *Of Home Divisions.*

67. The Council has provisionally grouped the Home Divisions in Constituencies for election of Representatives, 1916-17, in the same way as for 1915-16. In a considerable number of cases memberships have fallen slightly as compared with last year's figures, owing largely no doubt to circumstances in connection with the War. In the opinion of the Council, however, it is undesirable in the circumstances to reduce further the number of Constituencies. The Council has authorised the Organisation Committee finally to decide the grouping upon publication of the Annual List, 1916.

(b) *Of Oversea Divisions.*

Each Oversea Division and Division-Branch has been made an independent Constituency.

ARTICLES AND BY-LAWS.

68. The alterations of Articles proposed by the A.R.M., 1914, were carried out by Extraordinary General Meetings held in July and August, 1915.

QUESTION OF A CONFERENCE OF SECRETARIES IN 1916.

69. The Council has decided not to hold a Secretaries' Conference in 1916, as it is of opinion that under present conditions a Conference would not be a success.

BOUND VOLUMES OF SUPPLEMENTS.

70. It has been arranged that in accordance with the instruction of the A.R.M., 1915 (Min. 55), Honorary Secretaries

* Owing to the shortage of paper the Council has this year omitted from its report the usual grouping lists of Branches and Divisions, the reports of Branches, and the attendances at meetings of the R.B., Council and Committees.

of Divisions shall be again supplied with half-yearly bound volumes of Supplements, the issue to commence with the half-yearly volume for January-June 1916.

QUESTION OF THE ASSOCIATION BECOMING ALSO A FEDERATION FOR OTHER MEDICAL BODIES.

71. Min. 52 of the A.R.M., 1915, instructed the Council to confer with other societies formed to safeguard the interests of sections of the profession, with a view to determining how far it might be possible for the Association to come into closer relationship with such bodies, and to report with drafts of any alterations in the Articles and By-laws which the Council might consider necessary to that end. In the opinion of the Council the present time is not auspicious for such conferences. Further consideration of the matter has therefore been postponed.

RULES.

72. The Council has approved since the last report of Council Rules of Organisation adopted by 4 Divisions and 8 Branches. Divisions and Branches in the United Kingdom not yet in possession of Rules are urged to apply to the Medical Secretary for copies of the Model Rules of Organisation.

CHANGES OF BOUNDARIES.

73. The only important change made has been the formation, in response to the unanimous wish of the local members, of a Grenada Branch.

REPORTS OF DIVISIONS AND BRANCHES FOR 1915.

74. In spite of the prevailing unfavourable conditions the Council is glad to report that reports, on the whole satisfactory, have been received from the large majority of the Divisions and Branches. A gratifying feature of the reports received is that they show improved financial co-ordination between Branches and Divisions.

75. The Council wishes to place on record its warm appreciation of the work done during the session by Honorary Secretaries and Acting Honorary Secretaries of Divisions and Branches, work rendered more onerous by the special difficulties of the present time.

(a) *Reports of Home Divisions.*

76. Of the 212 Home Divisions, 150 have up to March 30th reported for 1915.

(b) *Reports of Home Branches.*

77. Up to the same date reports for 1915 have been received from 25 of the 41 Home Branches.

(c) *Reports of Oversea Divisions and Branches.*

78. Circumstances in connection with the War have prevented these from reporting as well for 1915 as has recently been the case.

GRANTS TO BRANCHES.

(a) *Home Branches.*

79. Grants for 1916 varying from 1s. to 4s. per member are being made to such of these Branches as require grants and have furnished satisfactory reports for 1915.

(b) *Oversea Branches.*

80. These grants have been made on the same basis as in previous years, namely, at the rate of 4s. per member who has paid the full subscription for the year, and 2s. per member elected after July 1st who has paid half the ordinary subscription.

(c) *Supplementary Grants.*

81. Supplementary Grants have been made to the Connaught and North of England Branches.

(E) *Journal.*

82. In the Report for last year attention was directed to the many difficulties which had to be faced in the production of the *Journal* owing to the shortage of the paper supply. These difficulties recently have become more acute, and with the stoppage of the export of wood pulp from Sweden, and the restricted facilities of transport, it is not clear what the future has in store.

83. Throughout the year the number of pages of the weekly issue of the *Journal* has been materially curtailed, and with the change of the postal rates in November, 1915, in order to come within the halfpenny rate and so save about £1,800 a year, the substance of the paper had to be materially reduced. These points were fully reviewed in the Supplement of the *British Medical Journal* of February 5th, and as they have an important bearing on the finances, they are also referred to in the Financial Statement; therefore fuller reference is not made to these matters under this head.

ADVERTISEMENT.

84. The Committee has closely watched the advertisements tendered for insertion in the *Journal*, and care has been exercised to guard against accepting for publication any that might conflict with the policy of the Association.

(F) *Science.*

• STEWART PRIZE.

85. The Stewart Prize for work in connection with the origin, spread and prevention of epidemic disease will be awarded during the current year to Colonel William Heaton Horrocks, A.M.S., B.Sc., M.B., for his work in preserving the British Army on the Continent from epidemic disease.

RESEARCH SCHOLARSHIPS AND SCIENCE GRANTS.

86. Although owing to the War many practitioners who would otherwise do so are unable to carry on research work, some practitioners who do research work are not eligible for Military Service, and the Council has therefore decided to invite applications for Grants for 1916-17 in aid of scientific research. It is not proposed however to appoint Research Scholars for 1916-17.

(G) *Medical Ethics.*

POWERS OF CENTRAL ETHICAL COMMITTEE.

87. By Standing Order of Council the Central Ethical Committee has been empowered to act for the Council on and deal with and adjudicate upon all questions of professional conduct arising in the United Kingdom, but not so as to exercise the power of expulsion given to the Council by the 10th Article of Association.

PROFESSIONAL SECRECY.

88. Last year in its Supplementary Report the Council intimated that it had invited the Royal College of Physicians, London, and Royal College of Surgeons, England, to appoint representatives to meet representatives of the Association in Conference on this subject. In response to this invitation replies were received from both Colleges to the effect that as the matter had already been considered and replies sent to the Director of Public Prosecutions it was not felt that any advantage would result from the proposed Conference.

ACTION AGAINST THE ASSOCIATION AND OTHERS.

89. In connection with the Action for conspiracy, libel and slander brought against the Association and five Members of the Coventry Division by the four medical officers of the Coventry Dispensary, and to which reference was made in the last Annual Report of Council, the Council reports that the plaintiffs' application to have the trial of this Action held in London has been allowed.

PUBLICATION IN LOCAL NEWSPAPERS OF NOTICES REGARDING APPOINTMENTS.

90. The Council has approved Regulations relative to the publication in local newspapers of Notices regarding Appointments.

EXPULSION.

91. The Council regrets to report that it has been necessary to remove from Membership of the Association a Member who continued to hold an appointment in connection with a Medical Aid Association in contravention of a resolution adopted in accordance with the provisions of its Ethical Rules by the Division to which he belonged.

RULES.

92. The Council has approved the adoption of the Revised Rules governing procedure in Ethical matters, as approved by the Annual Representative Meeting, 1915, by 113 out of 212 Home Divisions, and by 23 out of 41 Home Branches. The Council no longer recognises any Ethical Rules other than the Revised Ethical Rules approved by the Representative Body, and there are consequently 99 Home Divisions and 18 Home Branches which are not in a position to deal with any Ethical matters.

(H) *Medico-Political.*

MEDICAL INSPECTION AND TREATMENT OF SCHOOL CHILDREN.

93. The Council has considered the following Minutes of the A.R.M., 1915:—

Min. 111.—Proposed:

That the following Recommendation of Council be adopted:—

That the Annual Representative Meeting, 1915, approve the Memorandum on Medical Inspection and Treatment of School Children, as a statement of the policy of the Association in regard to these matters. (For the Memorandum see Supp., May 8th, 1915, p. 227.)

Min. 112.—Whereupon an amendment:

That treatment should not be included in the duties of a School Medical Officer.

The amendment was carried.

*Min. 113.—*The Memorandum on Medical Inspection and Treatment of School Children was thereupon, by leave, withdrawn by the Chairman of the Medico-Political Committee for further consideration.

Inasmuch as the Memorandum in question, which was the result of careful deliberation in conference with the Society of Medical Officers of Health, was approved by the A.R.M., 1914, at Aberdeen, and was merely referred to the Council for the purpose of incorporating therein certain amendments of minor importance adopted by that A.R.M., which has been done,

The Council recommends:

Recommendation A.—That the R.B. approve, as the policy of the Association on medical inspection and treatment of school children, the Memorandum published in the Supplement of May 8th, 1915 (pp. 227-9).

MEDICAL CERTIFICATES IN CONNECTION WITH POSSIBLE PENSIONS OR GRATUITIES TO DEPENDANTS OF SOLDIERS AND SAILORS KILLED ON ACTIVE SERVICE.

94. The certificates in question are required by the War Office for the investigation of claims to pensions or gratuities made by the dependants of soldiers and sailors killed on active service, and it has come to the notice of the Council that practitioners have been pressed to give these certificates gratuitously.

As there is bound to be a great demand for such certificates, which will require to be given with great care in view of the amount of national funds which will be involved, the Council is of opinion that steps should be taken to secure uniformity of action throughout the country.

The Council recommends:—

Recommendation B.—That in connection with the giving of certificates by medical practitioners as to the degree of capacity to earn their own livelihood of dependants of deceased soldiers or sailors for the purpose of establishing their claim to pension or gratuity, it is desirable—

- (i.) That there should be a uniform standard of estimating disability to earn;
- (ii.) That the work of certification should be done by a board of practitioners, and should be paid for.

Recommendation C.—That it be urged upon the Government that the above proposal would be conducive to public economy and efficiency.

PATENT MEDICINES.

95. A communication was addressed to Sir Henry Norman, Chairman of the recent Select Committee on Patent Medicines, conveying the resolution of the A.R.M., 1915, which placed on record its satisfaction with the recommendations of the Committee, and expressing the hope that when normal times arrived the Association might have his support in pressing upon the attention of Parliament the very serious evils which the Report disclosed, and the necessity for dealing with them drastically on the lines therein suggested. A reply has been received from Sir Henry Norman expressing his thanks for the resolution in question and stating that with a return to normal times he would be wholly at the service of the Association for any further help in his power in the matter.

MATERNITY AND CHILD WELFARE.

96. In view of the fact that local Sanitary Authorities were being urged by both the English and Scottish Local Government Boards to put into immediate operation the L.G.B. schemes for the establishment of Maternity and Child Welfare Centres, the Council issued to the Clerks and Medical Officers of local authorities in England, Scotland and Wales, copies of that part of the Association's report on this subject which was approved by the A.R.M., 1915. This report it will be remembered dealt with the necessity of employing the general practitioner in such schemes wherever possible.

Considerable interest has been shown in the report by local authorities, and requests have been received for some 600 additional copies, for circulation to the members of Committees dealing with the question. Many expressions of appreciation have been received regarding the action of the Association in thus circulating its views.

That part of the report of the Association which was referred back to the Council by the A.R.M., and which dealt with the question of the remuneration of medical practitioners for work in connection with schemes, is still under consideration by the Council. Application was made to Divisions for their views, but there was practically no response.

FEES FOR MEDICAL EXAMINATION FOR LIFE INSURANCE.

97. The Council has considered the action taken by the A.R.M., 1915, when, after considering the report of Council dealing with this subject, it decided to proceed to the next business. The Council has decided to take no further action in the matter at present.

NOTIFICATION OF BIRTHS ACT.

98. In view of the fact that the Notification of Births Act became law immediately after the Representative Meeting, the Council decided that it was not possible to take any useful action in connection with the following Minute 147 of the Meeting:—

Resolved: That this Meeting protests against the extension of the Notification of Births Act, on the ground that it compels the profession to reveal facts learnt by them in their professional work.

MEDICAL PROFESSION AND REBATE OF WAR DUTY ON PETROL.

99. Upon the intention of the Government to double the duty on petrol becoming known, the Council considered the question, but did not take any action as it was understood at first that commercial users of motors would not apply for rebate on the proposed tax. Subsequently, however, on it being reported that commercial users of motors had approached the Government on the question and had been granted a rebate, a communication was addressed to the Chancellor of the Exchequer expressing the hope that any rebate granted to commercial users of motor cars would also be extended to the medical profession. The reply of the Chancellor was favourable and a rebate of 50 per cent. of the new tax was conceded to the medical profession.

SUPPLY AND PRICE OF PETROL.

100. Complaints have been received during the past few months from every part of the country, but particularly from rural areas, as to the shortage of the supply of petrol and the price of such as could be obtained. Immediate and repeated representations were thereupon made to the Board of Trade. It was then found that the question had been taken in hand by the Ministry of Munitions, and representations were made to that body which resulted in a Conference being held between representatives of the Government and of the Association. The representatives of the Association pointed out that if prompt action were not taken the difficulty in obtaining a supply of petrol might lead to practitioners having to curtail their work. It was further urged that the fact that so many practitioners are now doing military work and attending to the practices of men on military service entitled them to special consideration.

101. The Council is pleased to report that the case of the profession for special treatment was received very sympathetically. The representatives of the Government were able to show that the question was an exceedingly complicated one, and that before effective action could be taken to secure a supply for the profession information must be obtained as to the amount likely to be required by the profession as a whole and in different parts of the country. Accordingly a circular has been issued to every medical man in the country and the Government expects very shortly to be in a position to estimate the total quantity required, and will then be able to proceed with its detailed arrangements for making such a quantity as can be spared available to practitioners. The Association has offered to the Ministry of Munitions the machinery of the Divisions of the Association in dealing with the question of distribution.

IMPORT DUTY ON MOTOR CARS.

102. In view of the fact that under the Finance (No. 2) Bill it was proposed to make a concession on the new "ad valorem" import duties on motor cars, accessories and component parts, in the case of motor cars proved to be constructed and adapted for use and intended to be used solely for certain business purposes or as *bona fide* motor ambulances, representations were made to the Chancellor of the Exchequer that such concession should be extended to motor cars of medical practitioners.

The Chancellor however intimated that he could hold out no hope of such a concession to medical motorists, as the exemption for trade vehicles was confined to motor ambulances and motor vans or lorries to be used *solely* in connection with the conveyance of goods or burden in the course of trade or husbandry, none of which vehicles could be used for purely private purposes, while the doctor's car could.

PROPOSED INCREASED TAX ON MOTOR CARS.

103. On the introduction of the Budget in April, 1916, it was seen that the increased tax on motor cars would fall very heavily on medical practitioners, and the Chancellor of the Exchequer was at once approached with a request that some special concession should be made to members of the medical profession who use their cars for professional purposes only. It was pointed out that, generally speaking, these cars are used in a way which might fairly entitle them to freedom from any tax, in the same way that commercial cars are free. The case of practitioners in the more sparsely populated districts who require to have cars of comparatively high power and on whom the tax will fall particularly heavily was specially pressed on the attention of the Chancellor.

The Chancellor of the Exchequer replied that it was the intention of the Government that medical practitioners should be entitled to a rebate of half the new tax, but the Council has again pressed the Chancellor to consider the desirability of leaving the present motor taxes untouched so far as concerns cars used by medical practitioners for professional purposes only. A reply has been received that the whole question is again under consideration.

DOCTORS' MOTOR CARS AND LIGHTING RESTRICTIONS.

104. In connection with the new motor car and lighting restrictions Order of the Home Office, communications were received from rural practitioners all over the country asking whether some relaxation of the restrictions could not be made in favour of medical practitioners using motor cars in the course of their professional work. Representations were therefore made to the Home Office, but as will have been seen from the correspondence with the Home Office published in the Supplement of January 15th, 1916, it was found impossible to obtain any relaxation of the Order for medical practitioners. The Home Office considers that the present Order must at any rate have a fair trial before any suggestions as to exemption or modification can be entertained. The Council is ready to take up the matter again if further experience shows that it is impossible for doctors to carry off their work under the Order.

PROPOSED COLLEGE OF NURSING.

105. The Council considered a letter sent to the Editor of the *British Medical Journal* by the Hon. A. Stanley, M.P., Chairman of the Joint War Committee of the British Red Cross Society and the Order of St. John of Jerusalem in England. The letter was addressed to all hospitals, seeking their support for a proposal for the establishment of a College of Nursing for the purpose of granting diplomas to nurses. The College has since been established as a limited Company.

106. The representatives of the Association on the Central Committee for the State Registration of Trained Nurses have been instructed to take such action as may be indicated by the attitude of the College to State Registration.

REDUCTION OF FEES FOR NOTIFICATION OF INFECTIOUS DISEASES.

107. The report of the Government Retrenchment Committee contained a recommendation that the fee to medical practitioners for notification of infectious diseases should be reduced for the following reasons:—

As doctors have now become familiar with the work of notification and so many additional diseases have been added to the list since the fees were originally fixed, we consider that the time has come for reducing the 2s. 6d. fee to 1s. The amount of labour involved in filling up the notification form is, we understand, very slight indeed, and a fee of 1s. would seem to be adequate remuneration for the purpose.

The proposal to reduce the fee was incorporated in a Local Government Bill introduced by the Government in April, and a communication was immediately addressed to the Local Government Board stating that the Association disapproved of the suggestion of the Retrenchment Committee, and asked to be given an opportunity of placing its views more fully before the Board by way of deputation.

108. A deputation, consisting of the Chairman of Representative Meetings, the Chairman of the Parliamentary Sub-Committee (Mr. Bishop Harman) and the Medical Secretary, was accordingly received by the Parliamentary Secretary of the Local Government Board (Mr. Hayes Fisher). A strong protest was made against the proposed reduction. It was, however, suggested that if the Government insisted upon a reduction, medical practitioners might be willing, as their contribution to retrenchment, to accept during the War a nominal fee of 1s. for the notification of measles only, seeing that compulsory notification of measles has just been introduced, and also that the number of cases would probably be large. Mr. Hayes Fisher promised to place the views of the deputation before Mr. Walter Long, but when the clause came up for discussion on April 11th it was found that the latter had been obdurate. In spite of strong protests made by Sir Philip Magnus, Mr. Jonathan Samuel and Mr. J. Boyton, the clause embodying the reduction went through. The three Members of Parliament have been thanked for their action.

109. The Council has repeated its protest against the reduction to the President of the Local Government Board and has, in addition, pressed upon him a point which the Council has had before it for some time, namely, the unification so far

as possible of the forms of notification of the diseases which medical practitioners are required to notify to various Government and local authorities. The Council has also urged that practitioners be supplied with franked envelopes for returning the forms to the authorities concerned.

PROPOSED DISCONTINUANCE OF REPORTS OF CERTIFYING FACTORY SURGEONS.

110. Another recommendation of the Government Retrenchment Committee which concerned the medical profession was the following:—

We understand that the reports of certifying surgeons on accidents, which cost £12,500 per annum, are now of little value, and entail in all serious cases a duplication of the reports made by the inspectors. The Committee on Accidents in Factories recommended that legislation should be obtained to enable them to be dispensed with, and we concur in this proposal.

The matter was at once considered by the Parliamentary Sub-Committee which had the advantage of the assistance of Dr. W. F. Dearden, Honorary Secretary of the Certifying Factory Surgeons Association, and representations were at once made to the Home Office asking that before this proposal was embodied in a Bill the Association should be allowed to submit its views on the subject by deputation. The objection of the Association to the abolition of these reports was based on the following grounds:—

(a) that reports on surgical cases require surgical experience which the factory inspector does not possess;—

(b) that the factory inspector does not come into close personal contact with the patient concerned in any accident, as does the certifying factory surgeon, and is therefore not in a position to obtain intimate first-hand knowledge as to the facts of the accident;—

(c) that having regard to the considerable amount of unskilled labour at present engaged in factories, and the depletion in the ranks of the factory inspectors, it would be injudicious from the public health point of view to abolish one of the principal safeguards of the workman as regards accidents, namely the investigation by the certifying factory surgeon;—

(d) the suggestion was made that consideration might be given to the advisability of extending the duties of certifying factory surgeons in connection with accidents, on the lines of their position with regard to certain industrial (poisoning) diseases. In these cases workmen alleged to be suffering from such diseases must, before claiming compensation under the Compensation Act, obtain from a certifying factory surgeon a certification that they are suffering from such a disease.

The Council is in close touch with the Certifying Factory Surgeons Association on this matter, and it is hoped that the Home Secretary will receive a joint deputation from the two Associations.

REPORT OF ROYAL COMMISSION ON VENEREAL DISEASES.

111. In the Annual Report last year the Council informed the Representative Body that representatives of the Association had given evidence before the Royal Commission on Venereal Diseases. The memorandum of evidence was submitted to the A.R.M. and approved. The report of the Commission has now been issued, and the Council welcomes the report as a great advance in the protection of the public health, and is glad to see how sympathetic the Royal Commission is to the views expressed on behalf of the Association. The Council will press upon the Government the importance of taking early action to carry out the recommendations of the Royal Commission.

112. Besides the recommendations to which so much publicity has been given as regards the public provision of treatment for venereal diseases, the Commission has strongly urged that effect be given to the recommendations of the Select Committee on Patent Medicines as regards the suppression of advertisements of persons professing to treat venereal diseases. In addition the Royal Commission is strongly in favour of a policy the Association has long recommended, namely, the confidential certification of the cause of death.

REPRESENTATION ON EXECUTIVE COMMITTEE OF NATIONAL COUNCIL FOR COMBATING VENEREAL DISEASE.

113. The Council has thought it desirable that the Association should, if possible, be represented on the Executive Committee of the National Council for Combating Venereal Disease, a body which is composed largely of the members of

the recent Royal Commission, and whose chief work will be to press by all possible means the recommendations of the Commission.

The Council has accordingly asked for representation on the Executive Committee, and if this is granted, will nominate the Chairman of Representative Meetings.

NOTIFICATION OF PREGNANCY.

114. The attention of the Council has been drawn by several Divisions to a movement in favour of the notification by doctors and midwives of pregnancy. This has already taken definite form in at least two areas, and in one of them (Huddersfield) a fee of 2s. 6d. is offered to practitioners for each case they notify, with the consent of the mother. The local profession decided to take no action in the matter pending consideration of the subject by the Association. The Council is entirely in favour of any scheme which will encourage prospective mothers to arrange in advance for their nursing and medical attendance during the period of pregnancy as well as at the time of delivery. But it is too early yet to say whether notification of pregnancy will or will not have this effect. Many persons who are deeply interested in the care of prospective mothers are afraid that notification may have quite the contrary effect, namely, of making the mothers, especially unmarried mothers, shy of consulting either a doctor or a midwife until the last available moment, for fear that their condition may be made more or less public.

The Council recommends:—

Recommendation D.—That while it is desirable to encourage prospective mothers to make early arrangements for being properly cared for during the time of pregnancy as well as at the actual time of delivery, the Association is not at present prepared to support notification of pregnancy to a public authority.

MANUFACTURE OF DRUGS AND CHEMICALS HITHERTO IMPORTED FROM GERMANY.

115. The Buckinghamshire Division asked the Council to bring to the notice of the Government the desirability of guaranteeing protection to firms willing to lay down plant to manufacture drugs and chemicals previously imported from Germany. The Council is of opinion that the country and the profession cannot afford again to be left at the mercy of a foreign supply of substances many of which are essential in medical and surgical treatment.

The Council has accordingly asked the Government to consider the desirability of assisting British manufacturing chemists to produce the necessary drugs and chemicals heretofore only imported from Germany, and is bringing the matter also before the following bodies:—Board of Trade, Local Government Board, National Health Insurance Commission, Pharmaceutical Society of Great Britain, and Society of Chemical Industry.

L.C.C. POWERS ACT, 1915.

116. The attention of the Council has been drawn by the Metropolitan Counties Branch to certain provisions of the L.C.C. (General Powers) Act, 1915.

Part IV of the Act provides under penalty that lying-in homes, with the exception of, *inter alia*, establishments conducted by medical practitioners certified as below, shall be registered. It enacts that its provisions with regard to registration, powers of entry, and inspection of such homes shall not apply in the case of a lying-in home carried on by a qualified medical practitioner with respect to which there shall have been lodged with the County Council a certificate, in a form to be prescribed, signed by two other qualified medical practitioners, to the effect that the home and its equipment are in all respects suitable for the purpose, and that the medical practitioner carrying on the home is a fit and proper person to do so, such certificate to be renewable yearly.

Part V of the Act makes similar provision for the case of establishments for massage or special treatment. All such have to be registered with the County Council except, *inter alia*, establishments conducted by medical practitioners certified as below. The certificate by two practitioners in this case must be to the effect that such establishment is not and will not be used for any immoral purpose, and that the medical practitioner carrying on the establishment is a fit and proper person to do so.

117. The Council is of opinion that such a requirement from a medical practitioner constitutes a very serious

reflection on the medical profession and on the General Medical Council, the body which is supposed to remove from the Register medical practitioners who are not fit and proper persons to be registered. The Council has therefore drawn the attention of the General Medical Council to these sections of the Act and has suggested that the General Medical Council should, in the interests of the medical profession, arrange to have reported to it all proposals which affect the medical profession, contained in Parliamentary Bills either public or private.

118. Arrangements are made in the Head Office that all public Bills which seem to affect the medical profession are carefully examined by a member of the staff, but private Bills are not available for this purpose. The Council is trying to make arrangements with the London County Council whereby it may be provided in future with early information as to any future private Bills promoted by the London County Council which in any way affect the medical profession.

ELECTION OF DIRECT REPRESENTATIVES ON GENERAL MEDICAL COUNCIL.

119. As reported in the Supplementary Report of Council for 1915 there will be at the end of this year an election of direct representatives of the medical profession on the General Medical Council.

The retiring candidates are Drs. H. Langley Browne, H. A. Latimer, J. A. Macdonald and T. Jenner Verrall.

The Divisions have been consulted as to their nominations for the vacancies with the result that all the retiring members have been nominated for re-election.

The Council recommends:—

Recommendation E.—That the support of the Association be given to the following candidates in the election of direct representatives on the General Medical Council at the forthcoming election:—H. W. Langley Browne, M.D., F.R.C.S.E., West Bromwich; H. A. Latimer, M.D., M.R.C.S., Tunbridge Wells; J. A. Macdonald, M.D., M.Ch., LL.D., Taunton; and T. Jenner Verrall, M.R.C.S., L.R.C.P., LL.D., Bath.

(I) National Health Insurance.

CO-OPTION TO INSURANCE ACTS COMMITTEE.

120. In addition to the members appointed by the grouped Representatives the following have, in accordance with the By-laws, also been appointed members on the nomination of the various bodies mentioned:—

Dr. P. V. Fry, West Riding, Yorks.	Local Medical
Dr. T. Campbell, Lancashire	
Dr. T. Ridley Bailey, Staffordshire	and
Mr. H. B. Brackenbury, Middlesex	
Mr. P. Napier Jones, Berkshire	Panel Committees
Dr. J. R. Drever, Glasgow	
Dr. Olive Claydon, Oldham, Associations of Registered Medical Women.	of Great Britain.
Prof. Bostock Hill, Society of Medical Officers of Health.	
Dr. Major Greenwood, London, Poor Law Medical Officers' Association of England and Wales.	

The Committee also appointed Mr. T. Jenner Verrall and Dr. W. A. Hollis as two non-panel practitioners.

EFFECTS OF THE WAR ON THE MEDICAL SIDE OF THE INSURANCE ACTS.

121. The following resolution of the Representative Body has received careful consideration:—

Minute 157.—Resolved: That the profession notes with alarm the disturbance of the probable sickness incidence of insured persons owing to the withdrawal of healthy lives by enlistment in the Army, with the probable return of unhealthy lives into the insured classes at a later day; and also the reduction of advance of grants by the Insurance Commissioners to the different Insurance Committees.

As has already been reported to the members of the Association, the Commissioners have been interviewed on this subject, which was the subject of full debate. (For report of interview see Supp., July 31st, 1915, p. 70.)

122. The Council is fully imbued with the great importance of the subject but does not see its way usefully to prosecute it further until it has further data upon which to found its case for special consideration.

The Council recommends:

Recommendation A.—That in view of the difficulty experienced in ascertaining the exact number of insured persons who have enlisted, and in collecting evidence as to the sickness incidence of those insured persons remaining, and considering that strong representations on the subject have already been made to the Commissioners, no further action be taken at present, but that the Council be instructed to collect what information it can on the subject in order that it may be used when any revision of the terms on which Insurance practitioners are employed is discussed.

CONFERENCE OF REPRESENTATIVES OF LOCAL MEDICAL
AND PANEL COMMITTEES.

123. The Council decided to hold a Conference of representatives of Local Medical and Panel Committees, as in each of the past three years, if the Local Committees were of opinion that in present circumstances it was likely to be a success. The Committees were accordingly circularised on the question. There was a large majority against holding a Conference at present. The Council has therefore instructed the Insurance Acts Committee to call a Conference later in the year if and when it is of opinion that the occasion for it has arisen.

RELATIONS BETWEEN ASSOCIATION AND THE LOCAL
MEDICAL AND PANEL COMMITTEES.

124. The Representative Body will be glad to know that the relations between the Association and the large majority of the Local Medical and Panel Committees in England, Scotland and Wales continue to be close and mutually beneficial. Most of the Committees report their doings to the Head Office and make constant use of it for obtaining advice and assistance which the Association is always glad to give. The Association has ample evidence that this help is greatly appreciated. More and more the Head Office is being used as a clearing house for passing on to Local Committees the experience gained and forwarded by other Committees. The addition to the Insurance Acts Committee of representatives of Local Medical and Panel Committees has greatly strengthened that body.

DRUG TARIFF.

125. At a Conference held with the Insurance Commissioners (arising out of the decisions of the June, 1915 Conference of Representatives of Local Medical and Panel Committees) the Commissioners enquired whether the Association had considered the position that was likely to arise in connection with the amendment of Regulations concerning the supply of medicines if, as was expected, the recommendations of the Departmental Committee on the Drug Tariff resulted in the production of a Commercial Tariff.

126. Preliminary discussion only took place at that Conference, and subsequently the question was discussed exhaustively with the Commissioners. Suggestions were made by the Commissioners which were embodied in a Memorandum, which, after revision by the Insurance Acts Committee, was circulated to all Local Medical and Panel Committees in the country with a request for their opinion upon the various methods of dealing with the situation therein explained. The Memorandum (M. 4 and 5) was published in the Supplement to the *Journal* of 11th September, 1915. Meantime the Report of the Departmental Committee was published and was found to contain recommendations that the Drug Tariff should be placed on a Commercial basis.

127. The replies received from the Local Medical and Panel Committees were very carefully considered with the result that a communication was addressed to the Commissioners, stating:—

I. That the Association welcomed the Report of the Departmental Committee on the Drug Tariff in so far as it (a) justified the contention of the Association that the present drug tariff was full of the most extraordinary anomalies, and resulted in great injustice; (b) recommended the adoption of the main principles for which the Association contended; and (c) suggested that these principles should be carried out, in the main, by methods which were identical with, or consistent with, those put forward by the Association;

II. That the Association was willing, under proper conditions, to accept a commercial tariff on the lines laid down in the Departmental Committee's Report, provided such arrangements were made, by Regulation or otherwise, as should ensure that there should be no reduction of the panel practitioner's remuneration below the

minimum which was promised by the Chancellor of the Exchequer in 1912, as the assured basis of payment for doctor's services—namely, 7s. per insured person per annum, and

III. That with regard to matters of detail, the replies the Insurance Acts Committee had obtained from Local Medical and Panel Committees provided abundant opportunities for discussion if and when the Committee was assured that the one outstanding principle emphasised in all the answers would be conceded—namely, that the profession should be guaranteed that the 7s. would not be encroached upon.

128. The Commissioners immediately arranged for a further Conference which took place on October 14th, when it was indicated to the Commissioners that, having regard to the practical unanimity of the replies of Local Medical and Panel Committees on the question, the Association must first press for the guarantee of the 7s., and, secondly, for the retention by the profession of its financial interest in the "floating" 6d., particularly as the latter was one of the chief means of checking excessive prescribing.

129. At this Conference the Commissioners put forward a proposal which was discussed and subsequently embodied by the Commissioners in a Memorandum addressed to the Association asking for its opinion.

The gist of the proposal was:—

(a) That the Government should guarantee (i.) the doctors' minimum of 7s., and (ii.) payment in full on a commercial tariff of the chemists' bills, the Government expecting to cover the latter risk by the saving which it believed would follow from the lowering of the total cost of drugs;

(b) That the possibility of the doctors in any area getting the whole or part of the floating 6d. should remain exactly as at present. Prescriptions in future would be priced under both the old and the new tariff—the former for the purpose of calculating the proportion of the Drug Fund to go into the Practitioners' Fund, and the latter for the purpose of paying the chemists, the additional administrative work involved being paid for by the Commissioners.

130. After consideration of the proposal the Commissioners were informed:—

(i) That the Association approved the proposals of the Commissioners, and would advise Local Medical and Panel Committees to accept them;

(ii) That the Association would do all in its power to render effective the existing safeguards against extravagant prescribing as embodied in Article 40 of the Regulations, subject to the elimination of the functions of the Pharmaceutical Committee in the matter;

(iii) That the approval by the Association of the proposed arrangements was dependent on the understanding that no extra cost would be thrown upon the Panel Committees in carrying out the new administrative details.

131. The outcome of the Association's negotiations with the Commissioners was communicated to Local Medical and Panel Committees in Circular M.6 (Supplement to the *Journal* of November 6th, 1915), in which the Association urged acceptance of the altered conditions. Practically no opposition has been made to the new Drug Traffic arrangements by practitioners, and many Panel Committees have expressed their appreciation of the successful work done by the Association on their behalf.

132. It should be noted, however, that in Scotland, owing to the opposition of the chemists there, the old Tariff is still in operation, though the subject will be re-opened during the course of the present year.

ENQUIRIES INTO OVER-PRESCRIBING.

133. The Council in view of the undertaking (ii.) mentioned in par. 130 above which it felt justified in making on behalf of Panel Committees generally, is glad to report that as the result of an action in the High Court, brought by a panel practitioner against the local Insurance Committee with respect to the action of the latter in surcharging him upon the recommendation of the Panel Committee (the enquiry by that Committee having been conducted in accordance with the suggestions contained in the Association's Memorandum on the subject) the action of the Panel Committee has been completely vindicated. In this connection the Association has informed the

Commissioners (i.) that it is desirable that some Memorandum should be issued by them as regards the procedure to be adopted by Panel Committees in dealing with cases of alleged over-prescribing, such Memorandum embodying the experience gained from various appeals to the Commissioners and to the Courts, and (ii.) that the Association would be glad to have the opportunity of seeing any such Memorandum in draft form and of offering its suggestions thereon.

The Commissioners have stated their intention of issuing such a Memorandum and have promised to give the Association an opportunity of making comments on it before issue.

NEW AGREEMENT AND MEDICAL BENEFIT REGULATIONS.

134. New draft Medical Benefit Regulations for 1916, issued by the Commissioners were considered by the Insurance Acts Committee and approved, subject to amendment of one or two small points which the Commissioners accepted and embodied in the final form of the Regulations.

135. The alterations of the Regulations and Agreement for 1916 as compared with those for 1915 were—

- (i.) as regards the Drug Tariff, previously referred to.
- (ii.) as regards the administrative proceedings necessary to deal with cases of alleged over-prescribing. This change was necessitated by the new arrangements as regards the Drug Tariff.
- (iii.) a provision whereby an Insurance Committee may require, after consultation with the Panel Committee (and subject, in default of agreement between those Committees, to decision by the Commissioners) the abolition of the use of the term "rep. mist," and
- (iv.) a provision whereby all certificates shall be written in ink or in some other indelible substance, and a practitioner's signature shall be written with his own hand.

As regards (iii.) and (iv.) upon which neither the Association nor Panel Committees had been consulted beforehand by the Commissioners, the Association lodged a strong protest against this omission, which it was pointed out would, if repeated, seriously prejudice the smooth working of the present method of consultation between the two bodies. It is understood that the omission was purely an oversight on the part of the Commissioners and not by any means intentional.

The Association, therefore, in Circular M. 7 urged that the new Regulations might well be accepted by Local Medical and Panel Committees.

SUPPLEMENTARY DRUG TARIFF.

136. The Association has continued to carry out in conference with representatives of the Pharmaceutical Society, the pricing of the starred drugs in the 1915 Tariff, that is to say the drugs whose prices are subject to considerable fluctuations owing to the War. The Conferences are being continued during 1916 in view of the fact that the 1915 Tariff is still required for purposes of calculating the amount of the floating 6d. available for distribution to the practitioners of an area and the prices thereon must fluctuate with the prices obtaining in the 1916 Tariff.

STOCK MIXTURES.

(a) *Agreed List.*

137. The 1916 Drug Traffic contains a provision whereby a reduced fee will be paid to chemists for the dispensing of certain liquid preparations not exceeding 10 in number, which (i.) were, prior to 1st January, selected by a Panel Committee from a formulary or special pharmacopoeia locally adopted and agreed by the local Panel and Pharmaceutical Committees, or, failing agreement, settled by the Commissioners, as being capable of being stocked in bulk without deterioration, or (ii.) selected from time to time by the Panel Committee from a list agreed by the Association and the Pharmaceutical Society, or in default of agreement adjudged by the Commissioners to be capable of being stocked in bulk without deterioration.

138. In pursuance of the latter provision, a Conference was held (on November 18th) of representatives of the Committee, the Pharmaceutical Society, and the Commissioners, at the suggestion of the latter, with a view to facilitate the carrying out of the provision and to reduce to a minimum both differences of

opinion as to procedure between the Society and the Association and references from either, or both, to the Commissioners.

139. The Conference agreed on certain points to be avoided in selecting the mixtures to be included in the list. A further Conference was later held with representatives of the Pharmaceutical Society previous to which a list of proposed stock mixtures had been submitted by the Association. These mixtures had been selected as those most commonly in use among those Panel Committees that already have recognised stock mixtures or have local Formularies. In view of the importance of the technical side of the discussion the expert opinion of Mr. E. F. Harrison, Pharmaceutical Chemist, B.Sc., F.I.C., was obtained, and he accompanied the Association's representatives at the Conference. The negotiations are not yet completed, but the Council hopes that the Commissioners will soon be in a position to circulate the agreed list of stock mixtures for the use of such Panel Committees as care to use stock mixtures.

(b) *General Question of the Use of Stock Mixtures.*

140. The National Association of Insurance Committees forwarded for the comments of the Association a strong protest it had received against the use of Stock Mixtures from the West Ham Insurance Committee. Opportunity was taken to forward a full reasoned reply on the whole subject in the hope that it might help to dispel some of the ignorance of the subject which is displayed by many members of Insurance Committees, even by pharmaceutical representatives on those Committees who should know better. The letter was published on page 50 Supplement, March 25th, 1916, and it is hoped that Panel Committees and medical representatives on Insurance Committees will find it useful.

SUSPENSION OF RIGHT OF TRANSFER OF INSURED PERSONS IN CERTAIN CASES.

141. The 1915 Conference of Representatives of Local Medical and Panel Committees passed a resolution urging that the Commissioners be invited to withhold the right of an insured person to transfer from the list of any doctor who is absent on naval or military service for the period of the war, or until a reasonable time after his return. This was brought to the notice of the Commissioners at the Conference the Insurance Acts Committee had with them in July last and received sympathetically by them. The Regulation issued by the Commissioners as a result of the Conference has, it is understood, given great satisfaction to Insurance practitioners who have accepted commissions in the Army or Navy.

INQUIRY INTO THE WORKING OF THE INSURANCE ACTS.

142. The Council, noting various announcements in the press that Approved Societies were intending to urge the Government to hold an inquiry into the working of the Insurance Acts, immediately informed the Prime Minister and Mr. C. H. Roberts, M.P., that while the Association would welcome an inquiry at an appropriate time, it would be impossible at the present to secure the attendance of medical witnesses or to collect the evidence that the Association would desire to place before such an inquiry. Mr. Roberts replied that the Government and Commissioners concurred in the opinion of the Association. Later when it was announced that an inquiry was to be held on the financial scheme of the Acts as regards sickness, disablement and maternity benefits, the Chairman of the Insurance Commissioners was asked whether the omission from the reference to the Enquiry Committee of Medical Benefit was deliberate. He replied that the Association "was right in understanding that the terms of reference to the Enquiry Committee were carefully framed with a view to excluding altogether matters comprised within the terms and conditions of Medical Service under the Insurance Acts." In view of this very specific statement the Council has taken no further action in the matter.

PAYMENTS TO PANEL PRACTITIONERS—1914 AND 1915 ACCOUNTS.

143. Repeated and urgent complaints have been received from all quarters of the country as to the alleged excessive deductions made from the monthly or quarterly advances to Insurance practitioners, and to the protracted delay in the settlement of the 1914 accounts. Considerable correspondence has taken place between the Association and the Commissioners, all of which has been reported in the Supplement.

144. As regards the deductions from advances the Commissioners hold very strongly that the uncertainty as to the

lists, caused by recruiting in addition to the normal inflation of all lists, justified them in their recommendation to Insurance Committees that not more than £72 per 1,000 persons on the Register be advanced quarterly, and they are advising the advance of practically the same amount for 1916.

145. As regards the settlement for 1914, the Commissioners late in 1915 stated that it was hoped to proceed with it forthwith, but not until April 1916 was the settlement made so far as the Council can ascertain, and the payments are not yet made in some areas. This is a most unsatisfactory state of things, and while willing to make all allowances for a Department that has seen, like so many other bodies, all its usual arrangements upset by the War, the Council is of opinion that any system of payment which cannot provide for final settlement until 16 months or more after the termination of the year in which the money is due is a bad one and must be altered. Questions are now arising as to whether the same delay will occur as regards the settlement of the 1915 accounts. An interview with the Commissioners took place on April 19th, at which the whole subject was discussed. The Council hopes shortly to be able to place before Local Medical and Panel Committees proposals for dealing with the situation.

MEDICAL REFEREES UNDER THE INSURANCE ACTS.

146. The Council has given very careful consideration to the following Minute of the A.R.M., 1915:—

Minute 152.—Resolved: That the Representative Body, on reconsidering the whole subject of fees for examination and report on cases submitted to part time referees under the National Insurance Act, requests the Council to consider and report as to the advisability of greater elasticity as between case and case in the fees demanded for these examinations.

The Council recommends:

Recommendation B.—That pending the establishment of a permanent system of referees under the Insurance Commission, it is desirable that the Association should co-operate in the promotion of a system of temporary arrangements under suitable conditions.

Recommendation C.—That the fee of 10s. 6d. already approved by the Representative Body for examination of and report on cases submitted to part-time referees under the National Insurance Act be re-affirmed as the minimum fee for cases examined by practitioners who hold no stated appointment to the Approved Society submitting the case, and Divisions and Branches be allowed to approve schemes for the payment of practitioners in their areas appointed as medical referees to Approved Societies, provided that where such a scheme involves payment by salary or in accordance with the time occupied, or the acceptance of a fee less than 10s. 6d. per case examined, the scheme shall require the approval of the Council of the Association.

COLLECTIVE BARGAINING ON BEHALF OF INSURANCE PRACTITIONERS.

147. The 1915 Conference of representatives of Local Medical and Panel Committees requested the Association to devise a scheme whereby collective bargaining on behalf of Panel Committees could be carried out by the Association in connection with the signing of new agreements by Insurance practitioners. Considerable attention has been given to this subject and a memorandum is ready for use at an appropriate time. It was proposed to circulate it to Panel Committees in time for discussion at the Conference had the latter been held at the usual time. The Memorandum will now be held in readiness either for the Conference when it is held, or for use prior to any negotiations which may be necessary as to any material alteration of the terms of service.

TRAVELLING EXPENSES OF MEMBERS OF PANEL COMMITTEES.

148. On a representation by several Panel Committees the opinion of all such Committees was taken as to the desirability of Panel Committees being allowed, if they so desire, to pay travelling expenses of their members out of the statutory allotment from the Medical Benefit Fund. It was found that most Committees were in favour of this. Representations have been made to the Commissioners accordingly, and the Pharmaceutical Society of Great Britain has promised to co-operate by making a similar representation as regards Pharmaceutical Committees.

DEFINITION OF THE TERM "CONFINEMENT" IN THE MODEL AGREEMENT.

149. The opinion of the Association having been sought by several Panel Committees, they have been informed that the time during which a practitioner is not by virtue of his agreement (Clause 2 (1)) required to give treatment in respect of a confinement should be held to be the period of ten days after the birth of a child.

(J) Public Health and Poor Law.

SECURITY OF TENURE FOR MEDICAL OFFICERS OF HEALTH.

150. Members will be gratified to learn that the new President of the Local Government Board (Mr. Walter Long, M.P.) has intimated to Sir Philip Magnus, M.P., who, with Dr. Addison, M.P., introduced the deputation to Ministers on this subject in 1914, that like the late President of the Board he is strongly in favour of security of tenure for whole-time medical officers of health and sanitary inspectors appointed in the future. An Order of the Board has been drafted accordingly, but its issue is being postponed for the present for, it is understood, the following reasons:—

First, because many of the best men who previously held these posts are now serving in the Army or Navy, and that it is consequently undesirable that their places should be permanently filled by other applicants in their absence.

Secondly, because even when vacancies occur through death or resignation, such vacancies cannot be so efficiently filled at a time when competition for the appointments is necessarily restricted owing to the absence of many competent men who might be applicants.

The Council is of opinion that these are good and sufficient reasons for the postponement of the issue of the Order. The matter will be re-opened at the first opportunity.

DEPARTMENTAL COMMITTEE ON POOR LAW ORDERS.

151. The Council has intimated to the Departmental Committee on Poor Law Orders its approval of the Memorandum forwarded to that body by the Poor Law Medical Officers' Association, and has urged upon the Committee that the suggestions contained in that Memorandum for the simplification of such Orders be accepted.

PUBLIC HEALTH AND POOR LAW APPOINTMENTS.

152. The Council is pleased to report that action has been taken in support of the policy of the Association in connection with a large number of appointments, and that with very few exceptions the action has been successful.

(K) Scotland.

MIDWIVES ACT FOR SCOTLAND.

153. The Council has great pleasure in reporting that acting on representations made by various lay and medical bodies in Scotland, including the Scottish Committee, the Secretary for Scotland introduced a bill for the Registration of Midwives in Scotland which has now become law. Under the Act two medical practitioners are to be appointed by the Scottish Committee as members of the Central Midwives Board, Scotland, and it is interesting to note that this is apparently the first Act of Parliament in which any statutory recognition is given to the Association.

The Scottish Committee has appointed Dr. Wishart Kerr, of Glasgow, and Dr. Michael Dewar, of Edinburgh, as its representatives, and they will retain their seats on the Board for five years from the commencement of 1916.

SUGGESTION BY PARLIAMENTARY RETRENCHMENT COMMITTEE TO ABOLISH SCOTTISH INSURANCE COMMISSION.

154. The Scottish Committee had before it a report in the lay press of the alleged intention of the Retrenchment Committee to abolish the Scottish Insurance Commission and administer the Insurance Acts in Scotland by a central body sitting in London. The Committee at once ascertained the opinion of the Scottish Divisions, which showed that they were practically unanimously against the proposal. The suggestion seems to have been dropped, at any rate for the present.

MEDICAL REFEREES UNDER THE INSURANCE ACTS.

155. Considerable attention has been given by the Scottish Committee to proposals made by the Scottish National Union of Friendly Societies in regard to the appointment of medical referees to Approved Societies acting under the Insurance Acts. That Union was prepared to allow such appointments to be made by representative bodies of the medical profession in each area, but the fees offered were less than the minimum fee laid down by the Representative Body of the Association. Grave dissatisfaction has been caused to loyal members of the Association in Scotland by the operation of this minimum fee, and the Committee has made suggestions to the Council as regards the modification of the present position.

COST OF CENTRAL BUREAU FOR CHECKING INSURANCE PRESCRIPTIONS.

156. Several inquiries have been received by the Scottish Committee asking whether Panel Committees should subscribe to the cost of the Scottish Central Bureau for checking prescriptions. Acting on the advice of the Insurance Acts Committee the Scottish Committee has advised that each Panel Committee should decide for itself whether the work done by the Central Bureau has been beneficial to practitioners in the area concerned, and, if so, that it should contribute to the cost.

PAYMENTS TO INSURANCE PRACTITIONERS FOR 1915.

157. Many expressions of dissatisfaction have been received from Insurance areas in Scotland concerning the long delay in the settlement of Insurance practitioners' accounts for 1914 and 1915. The Scottish Committee accordingly approached the Scottish Commissioners and expressed the view that whatever excuse there might be for delays in 1914, caused as they were by the entirely unforeseen circumstances of the war, that could not apply to 1915, as there had been ample time to put into operation the machinery for ascertaining the name of every insured person who enlists. The Committee also stated that in its opinion the delays were due primarily to the inertia of the Approved Societies who would not voluntarily send the necessary information to the Commissioners, and apparently no particular pressure is being put upon them by the Commissioners. The Committee therefore asked whether during 1915 there were likely to be the same deductions from the payments made to Insurance practitioners and the same delay in making a final settlement, and, if such deductions and delays were expected, what steps were being taken to obviate them. The reply of the Commissioners was of a non-committal nature which did not clear up any of the difficulties of the Committee. A copy of the correspondence between the Committee and the Commissioners was published in the Supplement of March 4th, 1916.

(L) Ireland.

SETTLEMENT OF THE CERTIFICATION QUESTION.

158. In accordance with the request of the Chairman of Council and Treasurer that as few meetings of Committees as possible should be held, the usual quarterly meetings of the Irish Committee were not called as there was no pressing business for the special consideration of the Committee. Most of the members of the Committee, who were also members of the Irish Medical Committee, had been repeatedly called to Dublin during the year in connection with the negotiations with the Irish Commissioners over the question of certification of sickness benefit under the Insurance Act. These negotiations were conducted by the Irish Medical Committee at whose disposal the Irish Committee, B.M.A. two years ago put the services of the Irish Medical Secretary. Owing to the friendly offices of Dr. Macdonald, Chairman of Council, and the Medical Secretary, an interview was arranged between Mr. C. Roberts, M.P., who had assumed responsibility in Parliament for the administration of the Insurance Act, and the representatives of the Irish medical profession. As the result of this interview, which took place at the time of the Annual Representative Meeting of 1915, negotiations for a settlement progressed satisfactorily, and the new arrangements for the certification of sickness benefit came into force on the 1st January, 1916. The conditions of certification from an ethical and monetary point of view are on the whole satisfactory. As regards remuneration the doctors in rural districts have got their full demand of half-a-crown per insured person, the mixed and urban areas 2s. per insured person, and in urban areas with over 10,000 of a population, where the doctors demanded 2s. 6d. per certificate, they are to be paid at the capitation rate of 1s. 3d. Experience alone will

prove whether this capitation rate will be more or less than the equivalent of 2s. 6d. per certificate. The provisions made in the certification scheme for the appointment of whole-time medical referees have been abandoned until after the war, lest their appointment might interfere with the supply of doctors for military service. At the urgent request of the representatives of the Irish Medical Committee instructions were included in the Memorandum of Instructions to Medical Certifiers, issued by the Irish Insurance Commissioners, that a doctor who had signed the Agreement for certification *must refuse* to examine or issue a certificate to any insured person who is under the treatment of another doctor, whether he signed the Agreement for certification or not, so long as such doctor is prepared to issue free of charge to insured persons such certificates as may be required by the body administering Sickness and Disablement Benefits.

159. There are, however, some important details to be arranged between the doctors and the Insurance Commissioners as regards the method of payment and the frequency of certificates in long continued disability. In the latter respect doctors in rural areas protest that, if Approved Societies persist in their demand for weekly certificates, necessitating domiciliary visits where the insured persons are no longer under medical treatment, practitioners will be unable to recoup themselves out of the certification remuneration owing to the expenses incurred in travelling long journeys, especially at the present time when petrol and motor taxes are so very high.

IRISH MEDICAL WAR COMMITTEE.

160. A general meeting of the profession of the City of Dublin, convened by the Dublin Division of the British Medical Association, was held at the Royal College of Physicians on May 18th, 1915, when the President of the College (Dr. McDowell Cosgrave) was in the Chair. The meeting was very well attended, enthusiastic, and most representative of the profession. Dr. M. R. J. Hayes, Honorary Secretary of the Dublin Division of the British Medical Association, explained the objects of the meeting, and amongst others who addressed the meeting were: The President of the Royal College of Physicians, President of the Royal College of Surgeons (Mr. F. Conway Dwyer), Professor McWeeney, Dr. Tweedy, Sir Andrew Horne, and Sir Arthur Chance. A Committee was formed called the Dublin War Emergency Committee, consisting of two representatives of each of the various licensing bodies in Dublin with power to add to their number. Subsequently, on the suggestion of the Central Medical War Committee, the Dublin Committee invited the provincial medical schools in Belfast, Cork and Galway to select representatives to act on the Committee. This invitation was accepted, with the result that the more representative body is now known as the Irish Medical War Committee. Dr. M. R. J. Hayes is Honorary Secretary and the Irish Medical Secretary, Dr. T. Henneasy, Assistant Secretary. The Irish Offices of the British Medical Association, 16, South Frederick Street, Dublin, were placed at the disposal of the Irish Medical War Committee and have been adopted as the official address of the Committee. The Irish Medical War Committee has done excellent work in providing recruits for the Royal Army Medical Corps with the result that the Irish profession has supplied long ago more than its proportion of officers. Nevertheless the Committee is determined that there shall be no falling off in its efforts to keep up a sufficient supply of doctors for service with the Army and Navy as long as the war lasts.

(M) Oversea Branches.

161. The ordinary activities of the Oversea Branches have, as in the case of the Home bodies, been largely in abeyance in view of the claims upon the profession as a result of the War. The Council has noted with much gratification the patriotic way in which many of the Oversea Branches have assisted their respective Governments in connection with the National Emergency, notably in aid of the recruiting of medical men for His Majesty's Forces. A large number of the Oversea members of the Association have been or are on active service. Many other members have been doing part-time service with Forces in their respective districts. In many cases the Military Authorities have expressed to the respective Branch Councils their appreciation of the valuable assistance and support thus rendered by the Branches.

J. A. MACDONALD,

Chairman of Council.

26th April, 1916.

Association Intelligence.

PROCEEDINGS OF COUNCIL.

A MEETING of the Council was held at 429, Strand, W.C., on April 26th.

Present :

Dr. J. A. MACDONALD, LL.D., Taunton, in the chair.
Dr. W. AINSLIE HOLLIS, Hove, Past President.
Mr. E. B. TURNER, London, Chairman of Representative Meetings.

Dr. EDWIN RAYNER, Stockport, Treasurer.

Dr. JOHN ADAMS, Glasgow	Dr. JOHN GORDON, Aberdeen
Lieutenant-Colonel Sir JAMES BARE, M.D., LL.D., Liverpool	Dr. JAMES GREEN, Portsmouth
Surgeon-General P. H. BENSON, I.M.S. (retired), Southwick	Major T. D. GREENLEES, Weymouth
Dr. M. G. BIGGS, London	Dr. MAJOR GREENWOOD, London
Lieutenant-Colonel R. A. BOLAM, Newcastle-on-Tyne	Mr. N. BISHOP HARMAN, London
Mr. H. B. BRACKENBURY, London	Dr. G. E. HASLIP, London
Major RUSSELL COOMBE, Exeter	Colonel W. T. HAYWARD (Australasian Branches)
Dr. J. SINGLETON DARLING, Lurgan	Major ALBERT LUCAS, Birmingham
Mr. E. J. DOMVILLE, Exeter	Dr. H. C. MACTIER, Wolverhampton
Major A. C. FARQUHARSON, Retford	Major GEORGE PARKER, Bristol
Lieutenant E. ROWLAND FOTHERGILL, Hove	Dr. F. J. SMITH, London
Dr. ADAM FULTON, Old Basford	Dr. W. JOHNSON SMYTH, Bournemouth
Mr. T. W. H. GARSTANG, Altrincham	Mr. T. JENNER VERRALL, LL.D., Bath
Dr. THOMAS GOODFELLOW, West Didsbury	Dr. CLAUDE WILSON, Tunbridge Wells
	Dr. O. R. M. WOOD, Woolpit

ABSENT.

Sir Clifford Allbutt, Colonel Galloway, Dr. Campbell, Dr. D. Ewart, Dr. Hamilton, Captain Larkin, Fleet Surgeon Lumley, R.N., Colonel C. H. Milburn, Colonel Munro Moir, and Captain Moorhouse were unavoidably prevented from being present.

NEW MEMBERS.

The CHAIRMAN welcomed, on attending for the first time, Dr. Claude Wilson, the Representative of the Kent, Surrey, and Sussex grouped Branches; also Lieutenant-Colonel Hayward of Adelaide, who again has been returned as the Representative of the Australasian Branches.

OBITUARY.

It was reported that Sir Francis Lovell and Mr. Colin Campbell, former members of Council, had died since the last meeting, and the Chairman was requested to convey an expression of sympathy to the respective families.

COLONEL GALLOWAY, A.M.S.

The Council offered its congratulations to Colonel Galloway on his appointment as Consulting Physician with the British Expeditionary Forces.

FINANCE.

A report containing a Retrospect of the Finances of the Association, covering the last ten years, was approved for presentation to the Annual Representative Meeting. This was published in the SUPPLEMENT of last week.

ENROLMENT SCHEME.

The action of the Treasurer in paying, to the amount of £88, expenses of the meetings of the profession in various centres to stimulate the Enrolment Scheme of the Central Medical War Committee was approved.

ANNUAL BALANCE SHEET, 1915.

The Financial Statement for the year 1915, as certified by the Auditors, was passed for presentation to the Annual Representative Meeting. The detailed accounts are published in this issue with the Report of Council.

QUARTERLY ACCOUNTS.

The accounts for the quarter, amounting to £10,769 6s. 5d., were approved, and the Treasurer authorized to pay same.

THE TREASURER.

Dr. EDWIN RAYNER reminded the Council that his third term of office as Treasurer of the Association would expire at the annual meeting in July, and that he would not seek re-election.

THE WITTENBERG CAMP.

The Council placed on record its abhorrence and condemnation of the barbarity and cowardice of Dr. Aschenbach in his attitude towards the typhus-stricken prisoners in the camp at Wittenberg.

ANNUAL MEETING, 1916.

Friday, July 28th next, is fixed for the holding of the Annual Representative and General Meetings in London.

NEW MEMBERS.

Fourteen candidates were elected members of the British Medical Association.

ANNUAL REPORT OF COUNCIL.

Much of the time of the Council was devoted to matters which are embodied in its Annual Report, published elsewhere in the SUPPLEMENT of this week.

Meetings of Branches and Divisions.

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.

A MEETING of the Lanarkshire Division was held in Glasgow on April 26th. Dr. GRANT (Blantyre), Vice-Chairman, occupied the chair. As the Honorary Secretary was on service Mr. W. S. McKenzie (Larkhall) was appointed Secretary *pro tem*.

The late Dr. Macpherson.—Dr. GRANT paid a tribute to the memory of the late Dr. Macpherson (Bothwell), who had been chairman of the Division, of the Lanarkshire Medical Practitioners' Union, and of the Lanarkshire Local Medical and Panel Committees, a member of the Lanarkshire Insurance Committee, chairman of the Lanarkshire Collieries Medical Service Association, and chairman of the Collieries and Public Works Surgeons Committee for Scotland, and also a member of the War Emergency Committee. The tremendous work he did for his medical brethren was done with energy, capacity, and tactfulness, and it would be impossible to find one to fill his place. It was resolved to enter on the minutes of the Branch an expression of the great sense of the loss sustained by the death of Dr. Macpherson, and to send an excerpt to his widow expressing sympathy for her in her sad bereavement.

Appointment of Chairman and Vice-Chairman.—Dr. Grant was unanimously appointed chairman and Dr. Fotheringham vice-chairman of the Division.

War Emergency Committee.—On the question of appointment or reconstitution of the War Emergency Committee, it was agreed that it should consist of Drs. Grant, Goff, Little, Fotheringham, and Monie, and Mr. Marshall, Clerk to the Insurance Committee.

NORTHERN COUNTIES OF SCOTLAND BRANCH: CAITHNESS AND SUTHERLAND DIVISION.

A MEETING of the Caithness and Sutherland Division has been held in Helmsdale for the purpose of considering a circular from the convener of the Scottish Medical Service Emergency Committee, pointing out the number of men in the area of the Division who held whole-time appointments in connexion with His Majesty's Forces; and asking for the opinion of the Division on the provisional estimate the Committee had made that it should be possible to free for service one other practitioner from the area.

Dr. KYD AITKEN, who is acting as war locumtenent for Dr. Turner, Lochinver, took the chair.

The SECRETARY read apologies of absence from a number of practitioners who found it impossible to attend the meeting, the scarcity of doctors and extra work thereby entailed making it difficult for them to leave their practices for a whole day.

After free discussion it was apparent that there were still a number of medical men in the area who were willing to undertake whole-time military service provided adequate facilities were afforded for carrying on their

work in their absence. The Secretary was instructed to forward the following observations to the Scottish Medical Service Emergency Committee:

1. There are fourteen medical men from the area at present on whole-time military service, eleven of whom offered their services voluntarily since the war began.
2. There are only seventeen practitioners left in the two counties of those normally practising there, and one whole-time officer.
3. There are no young graduates or other unattached medical men now in the area.
4. From the general character of the medical service in the rural parishes of the two northern counties, it is practically impossible for the medical man in one parish to attend to the needs of a neighbouring parish in cases otherwise than where it is at present done.
5. In the burghs of Wick and Thurso, in the medical service of which there are included the parishes of Wick, Watten, Keiss, Bower, Halkirk, Thurso, and Reay, the medical supply is at present hardly adequate.
6. More medical men can be liberated for military service from the area only if they are replaced by locumtenents, who must be able to undertake hard work and long journeys and stand exposure to all weather conditions.

The position of those men in the area of the Division who had not registered with the Emergency Committee, or who had refused to undertake any military duty, was also discussed, and, on the motion of the CHAIRMAN, seconded by Dr. MacLACHLAN (Dornoch) it was unanimously agreed that, as a protest against their attitude, no notice of meetings called in connexion with the present military situation should be sent them.

Association Notices.

ELECTION OF COUNCIL, 1916-1917.

NOTICE is hereby given that nominations for candidates for election as Members of Council by Branches or Groups of Branches in the United Kingdom for the year 1916-17 must be forwarded to reach the Financial Secretary and Business Manager, at the Office of the Association, not later than Saturday, May 20th, 1916. Each nomination must be on the prescribed form, copies of which will be furnished by the Financial Secretary and Business Manager upon application.

Separate forms have been prepared:

- (a) For a nomination by a Division, and
- (b) For a nomination by any three Members of a Branch respectively.

Those applying are requested to state for which purpose the form is desired.

An announcement of the Nominations received will be made in the JOURNAL of May 27th.

* Election will be by voting papers. These papers will contain the names of all duly nominated candidates, and will be issued from the Central Office on Saturday, June 10th, and will be returnable not later than Saturday, June 17th.

The result of the election of Members to the Council will be published in the JOURNAL of June 24th.

By Order of the Council,

GUY ELLISTON,
Financial Secretary and Business Manager.

May 6th, 1916.

ANNUAL REPRESENTATIVE MEETING, 1916.

DATE.

The Annual Representative Meeting of the Association, 1916, will be held at the Connaught Rooms, Great Queen Street, London, W.C., on July 28th and following days as may be required.

DATE FOR NOTICES OF MOTION.

Attention is drawn to the fact that *Notices of Motion*, if any, from Divisions and Branches for consideration by the Annual Representative Meeting must be published in the BRITISH MEDICAL JOURNAL not later than the issue of May 27th, and for this purpose should be received by me not later than May 20th, 1916.

ALFRED COX,

Medical Secretary.

May 3rd, 1916.

BRANCH AND DIVISION MEETINGS TO BE HELD.

LEINSTER BRANCH.—Dr. William Doolin, Acting Honorary Secretary (50, Fitzwilliam Square, Dublin), gives notice that the annual meeting of the Branch will be held at the Irish offices of the Association, 16, South Frederick Street, Dublin, on Monday, May 15th, at 4.30 p.m. Agenda: Appointment of officers. Adoption of revised organization rules and ethical rules. Receive report of financial position. Apply for supplementary grant for 1916 of such amount as the meeting may decide. Any other business.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—Drs. W. J. Greer and L. Freeman Marks, Honorary Secretaries, give notice that the annual meeting of the Branch will take place in Cardiff on June 8th for the election of officers and other business.

SOUTHERN BRANCH.—Mr. James Green, Honorary Secretary, gives notice that the Council of the Branch, at its meeting on May 18th, will nominate candidates for the following offices for the ensuing year—namely, the president-elect, two vice-presidents, the honorary secretary, and the honorary treasurer. The Honorary Secretary is prepared to receive nominations, in writing, from any three members of the Branch for any such office on or before June 1st; failing the receipt of such nominations, the nominees of the Branch Council will be duly elected, in accordance with Rule 5 (Organization Rules).

MEMBERS ELECTED TO THE BRITISH MEDICAL ASSOCIATION

(SEPTEMBER 1ST, 1915, TO MAY 4TH, 1916).

First List.

BY THE COUNCIL.

Anderson, Alan Douglas, Lieutenant R.A.M.C., M.R.C.S. Eng., L.R.C.P. Lond.
Anderson, Gustave Alexander M., M.B., Ch.B. Edin., Surgeon H.M. Australian Ship Pioneer, care of G.P.O., London
Bantry-White, Harry Ernest, M.B., Captain R.A.M.C. (S.R.)
Barrett, William Thomas, M.D., 643, Courtney Street, Victoria, B.C.
Bowman, Frederick B., Captain R.A.M.C., M.B. (Tor.)
Breton, William Kenneth Dudoit, Staff Surgeon R.N., M.R.C.S., L.R.C.P. Eng.
Clearkin, Peter Alphonsus, M.B., B.Ch., B.A.O., W.A.M.S., Sierra Leone
Clemens, Frederick William T., Surgeon R.N., M.B., B.S. Lond.
Copland, James Ebenezer, M.R.C.S. Eng., L.R.C.P. Lond., Grenada, B.W.I.
De Muth, Otto, M.D., C.M. McGill, Lieutenant R.A.M.C.
De Neef, César Victor Emmanuel, M.D., Brussels, Docteur en Médecine, Chirurgie et Accouchements, A. 172 Calais
Denvir, Joseph Charles, Lieut. R.A.M.C. (T.), M.B., B.Ch.
Edwards, Walter Goldsworthy, Staff Surgeon R.N., L.R.C.P. and S. Edin.

Harty, Arthur Henry, Surgeon R.N., M.B., Queen's Canada, M.R.C.S., L.R.C.P.
Hennessy, Joseph Martin Reeves, L.R.C.P. & S. Edin., Lieutenant I.M.S.
Hodgson-Jones, Russell Walbank, M.R.C.S. Lond., L.R.C.P. Eng., Lieutenant R.A.M.C.
Hughes, Dunbar Bovell Berkeley, M.B., C.M. Edin., Grenada, B.W.I.
Kennedy, Edward Galway, Captain I.M.S., M.B., B.Ch., B.A.O., R.U.I.
Lumley, William, Captain R.A.M.C., L.R.C.P. and S.I.
McKeever, Michael A., Lieutenant R.A.M.C., M.B., B.Ch., B.A., N.U.I.
Miller, Henry Cecil, Lieutenant R.A.M.C., M.B., B.Ch. Dub., B.A.O.

REDUCTION OF NOTIFICATION FEES.

DR. ARTHUR H. GREGSON (Blackburn) writes: The chief point about the reduction of the notification fee is whether we will actively oppose it, or whether we will regard one shilling as better than nothing.

If the Government will take away the compulsion as far as the medical man is concerned we cannot complain. If we consider it better to have one shilling than let the parent notify the case, then one shilling is a just amount. In this case we can expect the Government to reduce our panel fees and see if we will take that also lying down.

The course which seems to me the only one likely to be successful is to give the Government the alternative of taking away the compulsion, or hauling each individual doctor (who will fight) before the courts.

I see no reason why the medical profession should bear any special share in retrenchment unless the work also is reduced. Even after the Government protested against the rise in wages they gave rises repeatedly. If they really cannot afford to pay for measles being notified, let them cease to require notification; but they could not raise an additional 10 million before the war, and now they are raising 100 million.

To a great extent our generosity in treating people free is responsible for the Government action. In the days before the Government acknowledged responsibility our generosity would have been right, but the day the Government introduced the Insurance Act they compounded our bad debts and good debts, and acknowledged that the responsibility was upon themselves, even though they did not take it all at once.

DR. HENRY THOS. BARTON (Secretary, Blackpool Local Medical and Panel Committees) writes: I have been present at three Representative Meetings when the question of the British Medical Association becoming a trades union has been under discussion, and on each occasion our leaders from the platform have told us that in their opinion we should gain nothing by such a change. At Liverpool Mr. Hempson was especially emphatic when he asked Representatives what more they wanted than that which the constitution before them already gave.

The Association can now justify these opinions and render the profession a great service by moving effectively in the question of notification fees. In the recent Budget certain taxes have been withdrawn or modified in the face of vigorous protests from parties concerned. Is it not the duty of the Medico-Political Committee to take this matter up and point out to the Government the fallacies in arguments such as those used by Mr. Hayes Fisher in the House on April 11th? We are told that the authorities recognize the Association as the mouthpiece of the profession, and are exhorted to use that fact as an argument in canvassing for new members. In my Division there is a small but important section of practitioners who are antagonistic, and it is quite impossible under present circumstances to influence them. Experience of Representative Meetings has taught me that this state of matters typifies in miniature the whole profession. The Association has now an opportunity of reconciling the malcontents and once more standing where it did in 1912.

DR. S. J. ROSS (Bedford) writes: I think that the Retrenchment Committee might have made a suggestion which would have been of considerable financial benefit to the community, and to which nobody would have taken exception—the saving of the waste of printing and paper in connexion with the Insurance Act. Why are we so subdued over the suggested plan of paying 1s. for notifying cases of infectious disease instead of 2s. 6d.? Possibly because most of our more virile members are on active service, possibly because those of us who remain at home have so much to do that our power of initiative is exhausted; possibly because we were impressed, during the Insurance Act controversy, that we were numerically a negligible body so far as vote catching is concerned. If we had been numerically powerful, even in these days of stress, doubtless our fee would have been doubled, or, I may add, if we had belonged to the Labour party.

Ours is a profession noted for its generous dealing with the community, and so long as we are satisfied with verbal praise we are the most appreciated of the dwellers in this island. *Auti alteram partem* is the motto of the Association; therefore I bid you listen:

Scarlet fever was rife at the time I was called out to Cople, four miles away from Bedford, to see a child with a rash. These people had recently come to Cople, and had no doctor. They

were willing to pay, of course, but they had not the intention of so doing. I went out, and discovered that the child was suffering from scarlet fever. The only fee I obtained was the notification fee of 2s. 6d. A taxicab would have cost more. Now it is proposed to pay 1s. I can only say that if this proposal be carried, and I am called out to a village four miles away to see patients of whom I know nothing, I shall be otherwise engaged. The proposed fee would not cover even the petrol and wear and tear of the car. The Government may accept the 1s. fee, but I shall not.

DR. A. M. ST. JOHN WRIGHT (Liverpool) writes: It is only natural to expect a balanced judgement from such a committee, but is it so in this case?

Either the notifications are worthless (then why were they not fearlessly abolished *in toto* and the entire cost saved?), or if they are worth anything they are worth the paltry 2s. 6d. each. For I contend that a single notification of typhus, small-pox, plague, or cholera is worth the cost of a whole year's fees to the community involved; but to a nation depending on its overseas trade it is inestimable. Slipshod work will be the result of the miserable pittance of a shilling, and other nations will only be too glad to discredit the value of a bill of health given under such conditions from a British port, with the result loss of money, time, and temper by enforcement of quarantine regulations to safeguard their own community.

INSURANCE.

INSURANCE COMMITTEES.

LONDON.

FINES IMPOSED ON PANEL PRACTITIONERS BY THE
INSURANCE COMMISSIONERS.

Protest by the Insurance Committee.

It was reported to the meeting of the Committee on April 27th that the case of a practitioner against whom an accusation of neglect had already been preferred and sustained by the Committee had been further investigated by the Insurance Commissioners. After giving careful consideration to the practitioner's observations, the Commissioners stated that they could not avoid the conclusion that the practitioner did not take sufficient care in his treatment of the insured person concerned to enable him to arrive at a correct diagnosis. He admittedly had suspicions that the patient might be suffering from tuberculous disease, and had ample facilities for having his suspicions verified. The Commissioners accordingly decided to withhold the sum of £10 from the Exchequer grant for medical benefit, which would otherwise be payable to the Committee. The Committee, while resolving to take advantage of the provision in its agreement with the practitioner by which any sum lost to it through his default might be recovered out of the moneys payable to him, added a rider expressing the view that the range of surcharges of the nature of fines for breaches by practitioners of their agreement with the Committee was generally excessive and disproportionate, and beyond what the justice of the cases required.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

Local Medical War Committees.—At the meeting of the London Panel Committee on April 18th a motion was brought forward by Dr. M. COHEN, seconded by Dr. W. T. PAGE, affirming the desirability that the present members of the Panel Committee representing practitioners on the panel in the various districts of London should be co-opted as members of the Local Medical War Committees in their respective areas. Dr. J. A. ANGUS pointed out that, taking the metropolis as a whole, the panel practitioners were in the majority, and Dr. B. A. RICHMOND said that all that was wanted could be secured by individual action on the part of members of the Committee in their own neighbourhoods. The resolution was carried *nemine contradicente*.

Emergency Settlement of Accounts.—It was stated that the general body of panel practitioners in London had been consulted as to the desirability of pressing for the emergency settlement of their accounts for the medical year 1915, and that 90 per cent. of those who responded were in favour of such a course, the minority deeming it advisable that the final payment should be withheld until the Insurance Commissioners were in a position to calculate the actual figures in each case. It was resolved to

have resort to the expedient of an emergency settlement, and thus avoid the deplorable delay which occurred in connexion with the accounts for 1914.

Analysis of Drugs and Appliances.—In view of the fact that panel practitioners frequently have cause to question the quality or the quantity of the drugs supplied to insured persons by chemists, the Committee decided to urge upon the London Insurance Committee the necessity of a more careful supervision in this respect, stating that at present there was no guarantee that the drugs prescribed were dispensed as ordered.

COUNTY OF SURREY.

At a meeting of the Panel Committee on March 17th it was agreed to accept the degree of inflation of the index register of the county by 13.81 per cent. as also applying to the lists of insured persons for whom doctors dispense.

It was decided to make no alteration in the area to which the special mileage fund applies, but to protest to the Surrey Insurance Committee against the delay in providing the Panel Committee with the statistical data of prescribing in Surrey for the month of January, 1916.

YORK.

At a meeting of the Local Medical and Panel Committee on April 19th, the SECRETARY reported that he had given the clerk a written authorization to make a deduction for the voluntary levy of ½d. per insured person from all those panel doctors who had previously authorized such deduction, with an indemnification against any loss which might occur if any of the deductions were objected to. His action was endorsed.

The Secretary was instructed to ascertain from the clerk to the North Riding Insurance Committee what was being done as regards the question of the case values, and on receipt of his reply to write again to the Commissioners on the matter, pointing out the manifest injustice caused by withholding the final credit for 1914 from York when it had been sent to the North Riding.

A local pharmacopoeia, consisting of ten stock mixtures, was approved and forwarded to the Pharmaceutical Committee for acceptance as the official list of stock mixtures for the York area.

RENFREW COUNTY.

At a meeting of the Panel Committee on March 29th, it was decided to inform the Insurance Committee that the Panel Committee was not in favour of the total prohibition of proprietary medicines. It was reported that the final credits for 1914 were practically ready to be issued to Insurance Committees, and that they disclosed a considerable further credit for medical benefit. The new Panel Committee regulations were submitted, the effect of which is to postpone the election of a new Committee from March 31st, 1916, until "such date, not being later than twelve months after the termination of the present war, as the Commissioners may determine."

KINCARDINESHIRE.

At a meeting of the Local Medical and Panel Committees, on April 21st, the suggestion that the British Medical Association should make representations to the Commissioners on the subject of travelling expenses of members of Committees was approved.

CORRESPONDENCE.

PAY UNDER THE INSURANCE ACT FOR YEAR 1914.

DR. C. H. POWERS (Westend, Hants) writes: The so-called final settlement for 1914, which has recently made its belated appearance, surely puts panel practitioners in a very unenviable position.

When I, with some reluctance, signed the original contract, I foolishly imagined that the words of the agreement were intelligible and definite; and that I, in consideration of the fact that I dispensed for all my patients, would receive 7s. + 2s. per head.

The contract contains this clause: "The practitioner shall be credited with a rate of 1s. 7½d. per quarter in respect of persons included in his list at the commence-

ment of the quarter who are entitled to medical benefit, and a further rate of 1½d. per quarter in respect of persons so included who are eligible for sanatorium benefit."

Certainly some of the regulations were rather verbose (one sentence in one edition contains over 250 words), but, lest there should be any doubt about their interpretation, the Insurance Commissioners brought out "a concise official explanation." Paragraph 22 of this explanation says:

If the object desired is that each practitioner shall know as exactly as possible the income on which he can rely in respect of his liability to give attendance under the head of medical benefit during the year, the method to be adopted is obviously that of simple capitation, under which he will know definitely that if he has 1,000 insured persons on his list for the year he will receive in a district in which he does not dispense at least £325. With the 6d. for treatment of tuberculosis and 6d. from the Drug Suspense Fund (where cost of drugs does not exceed 1s. 6d. per head) it will be £375. In a rural district where the doctor did the dispensing it would be £450.

Again, paragraph 23 ends thus:

The payment for each quarter shall be on the average of those on his list on the first day of the quarter and those on his list on the last day of the quarter. Subject to these small adjustments, the practitioner working on a simple capitation system . . . may confidently rely on receiving at least 7s. (including the 6d. for tuberculosis), and possibly (with the amount derived from the Drug Suspense Fund) as much as 7s. 6d. per head per annum of all the persons on his list.

There appears to be no ambiguity in these words. As a further proof of what was originally intended, payment for 1913 was made as follows:

In August 3s. 6d. for treatment (less sums already received) and 1s. for dispensing.

In October 1s. 9d. for treatment.

In February, when the last payment was made, 1s. 9d. for treatment and 1s. for dispensing.

Up till 1914 all seemed clear, but with our present experience the official explanation might simply have said, "In no case can you get more than 7s. 6d. or 9s. with dispensing"; or "Wait and see, and finally take what can be found for you." We are, as a matter of fact, told that all each doctor can receive depends entirely upon how much the year's working of the Act has been able to provide for the Practitioners' Fund.

It may be of advantage to give details of my own work and pay during 1914. My practice is rural, and the population therefore scattered. I dispense for all. The average number on my list was accepted by myself and by the committee as 246. My record cards showed that 133 were actually attended, and the total number of attendances was 1,026, considerably more than half of which were visits, paid at various hours of the day and night and at various distances. I dispensed about 620 bottles of medicine, chiefly 3viii, 40 bottles of lotions, etc., 50 boxes of ointments, pills, tablets, etc., besides numerous dressings, bandages, etc. In the words of the concise official explanation, I confidently relied upon receiving £110 14s., less a small sum for expenses, and, in addition, an uncertain amount for unallotted persons.

The sum expected for those on my list consists of two different amounts:

	£	s.	d.
For treatment	92	5	0
For dispensing	18	9	0

I now give a copy of the statement received in February, 1916, with cheque in final settlement for 1914:

Professional Services:

	£	s.	d.	£	s.	d.
Your share of £38,592 6s. 3d., being amount allocated from Central Fund to Hampshire doctors for the year ...	88	9	2			
Less paid on account	73	9	3			
				14	19	11

Drug Account:

	£	s.	d.	£	s.	d.
Your share of £2,825 19s. 2d. ...	15	10	4			
Less paid on account	15	5	1			
				0	5	3
				15	5	2

No intimation is here given of how the figures are arrived at, though with each quarterly cheque the number on my list for the quarter and the rate of instalment were mentioned. It appeared that I was to receive £6 14s. 6d. less than the sum confidently relied upon, but

in reality it was much worse, as I discovered that the payment included a sum of, I believe, about £3 for the unallotted, so that I consider that I actually received nearly £15 less than I might naturally have expected. In answer to inquiries, various official explanations have been given, such as

1. That the number on doctors' lists in the county for the year 1914 was 107,245, but the Commissioners reduced this estimate to 92,765, because the year 1914 was eleven days short, and because the lists were said to be inflated.

2. That the words of the agreement do not mean that the practitioner shall be paid 1s. 9d. a quarter for each member.

3. That during 1914 the dispensing rate worked out at 1s. 5½d. instead of 1s. 6d.

With regard to (1) I can quite understand that the eleven days short does mean a certain reduction of the amount payable.

With regard to (3) the payment received by me worked out at a little more than 5d. for each thing dispensed, without counting dressings, or 6d. for each bottle of medicine, and nothing at all for ointment, pills, lotions, liniments, dressings, etc. What am I expected to put in the bottles with the present price of the empty bottle?

Which part am I supposed to look upon as my payment for work done? Certainly not the dispensing. Yet the treatment account comes considerably below the lowest rates of any recognized tariff.

I have given full details because, thinking that they might prove useful, I kept a record, and believe this statement may be interesting at the present moment.

Of course I am unaware whether the majority of panel practitioners are satisfied to be paid in this way for attendance on insured people, with the accompanying labour and worry of certificates, records, etc. I do, however, think that we must all realize what the present position means.

I am told that in the old club days, many doctors used to receive, without demur, whatever cheque the secretary sent and without ever having any list of members. So far as payment goes, the present system appears to be equally bad. Unless we can be assured that the words of the concise official explanation will be carried out, we must remain completely in the dark as to what we are going to receive.

If the lists are inflated, when will they be corrected and when shall we start afresh? At best, is it fair that, granted inflation, a practitioner shall have no opportunity of proving the number on his list? Also, what is the good of practitioners and committees agreeing each quarter as to the number if we are afterwards to be told that the numbers are all wrong? In conclusion, I can only say that our county officials have always dealt most courteously with inquiries, and I appreciate the difficulties of their position as well as of our own.

NON PANEL DOCTORS AND NATIONAL INSURANCE CERTIFICATES.

IN order to minimize as much as possible the inconveniences caused to doctors who attend insured persons in their private capacity, the Association has published books of certificates which, it is believed, will meet the requirements of approved societies, so far as is practicable in the case of certificates not given under the obligations of the official medical certification rules. The form of certificate is sufficiently like the official form to remove many of the difficulties which insured persons who have been attended by private doctors have had in satisfying the requirements of their approved societies, but is sufficiently distinct from the official form to show at once that it is being used by a doctor who is attending the patient in a private capacity—that is to say, either by a doctor who is not on a panel, or by a panel doctor other than the one on whose list the insured person is.

The Association has shown the certificates to the Insurance Commissions for England, Scotland, and Wales, and they raise no objection to the issue of them by the Association to medical practitioners for use when attending insured persons not being their panel patients, and not being persons whom they are attending as medical officers of institutions under Section 15 (4), or in virtue of "own arrangements" under Section 15 (3).

The books are being issued at cost price. They contain 50 certificate forms, and may be obtained from the Financial Secretary and Business Manager, British Medical Association, 423, Strand, W.C., price 6d. each, post free.

INSURANCE NOTES.

The Dundee Insurance Committee has sought to arrange for morning consultations, in addition to the evening hours fixed. A large number of doctors have not replied to the suggestion, and some have refused to give further facilities for consultations. It was decided to raise the matter again when new contracts were entered into.

At a meeting of the Glasgow Insurance Committee it was decided, on the motion of Dr. Lamb, to revert, for the duration of the war, to the practice which existed previous to December last of permitting repeat prescriptions.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeons L. Kilroy to the *Fidra*, J. W. Craig, M.B., to the *Pembroke*, N. L. Richards to the *Ajax*, P. H. Boyden, M.D., to the *Victory*, additional, for Haslar Hospital; W. K. Hopkins to the *Crescent*, G. E. Macleod to the *For. Surgeons* F. H. Rock, M.D., to the *Pembroke*, A. M. Henry to the hospital ship *Karapara*. Temporary Surgeons C. M. Williams to the *Impregnable*, R. P. Langford-Jones and G. E. Heath to Chatham Hospital, W. C. Wade to Plymouth Hospital, I. H. Lloyd and H. M. Oddy, M.B., to Haslar Hospital. To be temporary Surgeon: H. W. L. Molesworth.

ROYAL NAVAL VOLUNTEER RESERVE.

Staff Surgeon W. B. Betenson to the *Powerful*, vice Fasson; Surgeon Probationer A. E. Gallaher to the *Lydiard*, vice Aylward.

ARMY MEDICAL SERVICE.

Colonel J. M. Irwin, M.B., to be temporary Surgeon-General whilst a Director of Medical Services.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonels to be temporary Colonels whilst Assistant Directors of Medical Services: J. D. Alexander, M.D., A. W. Hooper, C.M.G., D.S.O.

Temporary honorary Lieutenant-Colonel Sir D. Hardie, M.D., having ceased to be employed by the Australian Voluntary Hospital, relinquishes his commission.

Major P. S. Leelan, F.R.C.S., to be temporary Lieutenant-Colonel whilst Assistant Director of Medical Services.

Temporary Captain J. P. Campbell, M.B., to be temporary Major. Captain A. D. Fraser, M.B., to be temporary Major whilst commanding a field ambulance.

Temporary Captain F. Charlesworth, M.B., to be temporary Major. Temporary Lieutenant T. H. Lunney, M.D., relinquishes his commission.

Temporary Lieutenants to be temporary Captains: I. M. Grant, M.D., G. B. Nicholson, A. B. Rendle, M.D., G. D. Fairley, M.B., T. B. Carlyn, W. H. Sheffield, M.B., D. Wood, F.R.C.S., J. Keag, K. H. A. Kellie, M.B., W. Gilbertson, M.D., E. C. Bourdas, M.D., F.R.C.S.E., E. P. Satchell, M.B., H. W. Barnes, M.B., J. H. J. Davys, K. F. Sonntag, M.D., H. A. C. Swertz, M.B., J. B. Walker, H. J. de Brent, A. D. Howard, M.D., P. Kitchen, P. H. Haddfield, J. C. Glen, D. Gillies, A. Emery, M.B., J. B. Alexander, M.B., C. A. Robinson, M.B., J. P. Howe, H. H. Folker, L. H. Walsh, M.D., F. Bryan, M.B., C. C. de B. Daly, M.B., B. H. Leigh, S. C. Dyke, W. N. Parker, M.D., T. W. Kelly, M.D., W. B. Heywood, M.D., R. A. Flynn, W. Beck, E. F. Greene, S. H. Hall, M.B., F. G. Bullmore, H. R. Sedgwick, M.B., E. Allan, M.B., J. D. Gunn, M.D., F.R.C.S.E., D. C. Graham, M.B., R. L. Ritchie, M.B., E. M. J. O'Farrell, F.R.C.S.I., W. C. W. Glenny, J. A. Goutie, M.B., J. C. Rix, W. Hutchison, M.B., J. Wylie, M.B., B. H. S. Aylward, M.B., E. A. Aylward, M.B., A. G. H. Smart, M.B., R. McC. Paterson, W. Haward, M.B., B. S. Browne, M.B., C. Butler, M.D., R. Deaman, J. D. Gimlette, E. B. Stone, W. D. Wilkins, M.B., W. Harvey, M.B., H. B. Taylor, H. B. Shepherd, J. Craig, M.D., P. A. McCarthy, M.D., W. A. Slater, H. Grey, M.D., B. M. Carruthers, M.B., C. H. Armitage, M.B., F. J. Fahy, M.B., E. W. S. Martin, M.B., W. J. F. Symons, M.B., R. A. Banbury, T. Johnston, A. G. Southcombe, M.D., W. V. Robinson, B. W. Cohen, M.B., N. C. Talbot, M.B., F. H. Moran, M.B., C. F. Strange, E. E. Isaac, C. J. Nicholson, F. T. D. Glendinning, N. McI. Falkner, M.D., J. W. Bennett, R. L. Williams, T. D. Jago, C. H. Hopwood, M.B., A. J. H. Boyton, C. B. Dobell, M.D., H. Crichton, M.D., T. Fearnehead, O. L. Chalk, F. L. Underwood, E. M. C. P. Power, G. B. Brown, M.B., L. Rose, M.D., W. Kirk, M.D., T. P. Gray, M.D., J. R. H. Ross, M.B., J. M. Twynman, M.B., M. Hall, A. E. Carsberg, M.D., G. H. S. Leitchworth, C. E. W. Wilmot, M.B., H. A. Upward, M.B., E. V. Hunter, J. B. Mason, M.B., H. H. K. Sparrow, W. Leggett, M.D., J. T. Hurst, M.B., B. B. Ferrar, R. Buchanan, M.B., W. W. Bonham, R. S. Dewar, M.B., G. M. Elliott, M.B., A. C. Profeit, M.D., I. A. Davidson, M.D., N. G. W. Davidson, F.R.C.S., W. Macdonald, M.D., A. H. D. Smith, W. E. Cooke, M.D., W. H. Hooton, F. S. Campbell, M.D., A. A. Rutherford, M.B., D. McK. Reid, M.D., H. H. Robinson, H. T. Prince, A. W. Tabuteau, F.R.C.S.I., O. J. Jenner, J. H. Mason, M.B., W. W. Dickson, M.B., A. L. E. F. Coleman, M.B., A. H. Corley.

Temporary Lieutenant T. Bates, M.B., F.R.C.S., relinquishes his commission.

Temporary honorary Lieutenants to be temporary Lieutenants: J. E. C. Maguire, J. G. Ackland, W. R. White-Cooper. E. C. Wilkinson, M.B., to be temporary honorary Lieutenant whilst employed at No. 5 British Red Cross (Liverpool Merchants') Mobile Hospital).

To be temporary Lieutenants: B. B. Roberts, A. B. Tucker, M.B., F.R.C.S., G. C. W. Williams, F.R.C.S.E., S. Littlewood, M.B., J. G. Ross, M.B., F. W. Davidson, M.B., C. Stanley-Clarke, M.B., W. B. Anderson, M.B., A. E. Harrison, M.B., D. Ross, M.D., S. Robson, M.D., F.R.C.S.E., W. M. Thomas, R. T. Taylor, A. E. Pinniger, M.B., H. L. Morrow, M.B., J. Harvey, M.B., W. Ward Smith, M.D., F.R.C.S., J. R. Hall, M.B., J. P. Lowson, M.D., P. J. Murray, M.B., J. MacF. Donnan, M.B., D. J. Drake, P. Milnes, R. A. Leembruggen, J. F. C. O'Meara, M.B., C. G. Skinner, M.B., A. M. Boyne, M.B., W. Anderson, M.B., B. Butterworth, M.B., A. F. Wright, M.B., J. C. Houston, M.B., W. F. Dunlop, M.B., C. W. Aikman, M.B.

GENERAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Captain T. J. Crean, V.C., D.S.O., to be temporary Major whilst commanding a field ambulance.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Major H. G. Smeeth, M.D., to be temporary Lieutenant-Colonel whilst commanding a field ambulance.
Captain R. G. J. McEntire, M.B., resigns his commission on account of ill health.

To be Lieutenants on probation: Cadet Lance-Corporal D. H. Paterson, M.B., Edinburgh University O.T.C.; G. Irving, M.B.

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

To be temporary Captains: J. R. Cummings, J. A. M. Campbell, W. P. Freeman, H. C. Hall, C. H. V. Smith, J. B. Swinden, C. E. Preston, E. McA. Campbell, Captain F. A. Brockenshire (Canadian Militia).

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

Lieutenant-Colonel E. V. Gosling, from East Anglian Field Ambulance, to be A.D.M.S. East Anglian Division, with the temporary rank of Colonel.

Lieutenant-Colonel T. F. Dewar, M.D., from D.A.D.M.S. to be A.D.M.S. Central Force, with the temporary rank of Colonel.

ROYAL ARMY MEDICAL CORPS.

London Field Ambulance.—Lieutenant (temporary Captain) D. J. Scott, M.D., to be Captain.

London General Hospital.—Lieutenant L. N. Reece to be Captain.

Welsh Field Ambulance.—Captain E. L. Anderson, M.B., from Attached to Units other than Medical Units, to be Captain. R. Griffith (late Major Royal Welsh Fusiliers) to be Major. K. F. R. Davison to be Lieutenant.

East Anglian Field Ambulance.—Captain W. J. Dearden relinquishes his commission on account of ill health.

South Midland Casualty Clearing Station.—Lieutenant C. W. T. Baldwin to be Captain.

South Midland Mounted Brigade Field Ambulance.—Lieutenant A. C. O. Brown to be Captain.

North Midland Mounted Brigade Field Ambulance.—Captain L. A. Dingley, M.D., to be temporary Major whilst in command of a field ambulance. Lieutenant J. B. Maclean, M.B., to be Captain.

Southern General Hospital.—Major A. N. Davis resigns his commission on account of ill health. Captain W. J. Foster, F.R.C.S., from T.F. Reserve, to be Captain, and is seconded for duty with the Reading War Hospital. Lieutenant R. Hitchings to be Captain.

West Lancashire Field Ambulance.—Lieutenant J. St. G. Wilson to be Captain.

Highland Field Ambulance.—R. Grey, M.B., to be Lieutenant.

Attached to Units other than Medical Units.—Captain (temporary Major) M. B. Ray, M.D., to be Major. To be Captains: Surgeon-Captain J. Owen, from Lancs (Fortress) Engineers, Lieutenants S. O. Bingham and G. Johnston, M.B.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BOLTON INFIRMARY AND DISPENSARY.—Second House-Surgeon. Salary, £200 per annum.

BOOTLE BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £170 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £160 per annum.

BURY INFIRMARY.—(1) Lady Senior House-Surgeon; (2) Lady Junior House-Surgeon. Salary, £250 and £150 per annum respectively.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. CAMBERWELL: PARISH OF ST. GILES.—Assistant Medical Officer for the Infirmary and Children's Homes. Salary, £220 per annum, rising to £240.

CARDIFF: KING EDWARD VII HOSPITAL.—Fourth-year Student Dresser. Salary, £26 per annum.

DERBYSHIRE ROYAL INFIRMARY.—House-Physician and Casualty Officer. Salary, £200 per annum.

FEDERATED MALAY STATES.—Assistant Superintendent of the Government Central Lunatic Asylum. Salary, £400 per annum, rising to £600.

HASTINGS: EAST SUSSEX HOSPITAL.—House-Surgeon. Salary, £100 per annum.

LEEDS: PUBLIC DISPENSARY.—Two Resident Medical Officers (ladies). Salary, £200 per annum.

LIVERPOOL HOSPITAL FOR CANCER AND SKIN DISEASES.—Honorary Assistant Surgeon.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—Assistant House-Surgeon (non-resident). Honorarium, 120 guineas a year.

MANCHESTER CHILDREN'S HOSPITAL, Pendlebury.—Two Resident Medical Officers. Salary, £100 per annum and £5 per month war bonus.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Lady House-Surgeon. Salary, £120 per annum.

NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—(1) Senior Clinical Assistant to Out-patients; (2) Two House-Surgeons; (3) House-Physician and Obstetric Assistant.

SALISBURY GENERAL INFIRMARY.—(1) House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN.—Junior Lady House-Surgeon. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Physician. Salary, £120 per annum.

VENTNOR: ROYAL NATIONAL HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.—Assistant Resident Medical Officer.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, S.W.—House-Physician. Salary, £200 per annum.

WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—Senior Student to act as Assistant to House-Surgeons.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Honiton (Devon), Turton (Lancaster).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BURTON, H., M.D.Durh., District Medical Officer of the Stockport Union.

LAM, P. W., M.B., Ch.B.Edin., Assistant Medical Officer to the Leicester Parish Infirmary.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTH.

HAY.—On May 1st, at Medina Lodge, Cowes, to Dr. and Mrs. Arthur Hay, a daughter.

MARRIAGE.

BACHELOR—KEMPTHORNE.—On April 26th, 1916, at Wyck Bissington, Gloucestershire, Henry Washington Batchelor, Captain R.A.M.C., to Kathleen Mary, younger daughter of Rev. and Mrs. P. H. Kempthorne.

DEATH.

HOWES.—On April 25th, at Lincoln, F. C. P. Howes, M.D.Edin., M.B.C.S.Eng., L.S.A., aged 75 years.

DIARY FOR THE WEEK.

TUESDAY.

RÖNTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Mr. H. E. Donithorne: The Ionization Method of Measuring X Rays. Dr. Martin Berry: A Mercury Interrupter. Major Wilson: A Tungsten Arc Lamp.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF SURGERY: SUBSECTION OF PROCTOLOGY, 5.30 p.m.—Annual General Meeting. Papers on Rectal Wounds in the Present War by Lieutenant-Colonel Cuthbert Wallace and Mr. P. Lockhart Munnery. Cases.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

THE POST-GRADUATE COLLEGE, West London Hospital, Hammer-smith, W.—Clinical work; graduates only.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
MAY.	
5 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
11 Thur.	London: Insurance Acts Committee, 2 p.m.
12 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
15 Mon.	Leinster Branch, Annual Meeting, Dublin, 4.30 p.m.
19 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
26 Fri.	London: Executive Subcommittee of Central Medical War Committee, 2.15 p.m.
JUNE.	
2 Fri.	London: Executive Subcommittee of Central Medical War Committee, 3.15 p.m.
8 Thur.	South Wales and Monmouthshire Branch, Annual Meeting, Cardiff.
JULY.	
28 Fri.	ANNUAL REPRESENTATIVE MEETING, Connaught Rooms, Great Queen Street, London, W.C., and following days as may be required.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

THE PLEA FOR COMPUSSION.

SIR,—I have read with interest your article in the *BRITISH MEDICAL JOURNAL* of May 6th. p. 661, "Urgent demand for medical officers" for the army.

I wish I could share your hope that the required number of doctors can be obtained by voluntary methods. For my part the sooner I see compulsion applied to our "rising" young surgeons and physicians the better pleased I shall be. My reason for this attitude of mind is best explained by quoting my own case.

When war broke out in August, 1914, I was home on temporary half-pay, as the result of illness contracted on military service in India. At this time also I was medical officer in an institution where the light indoor work suited my state of health. However, on the outbreak of war, after several unsuccessful applications on my part for permission to return to duty, I was finally permitted to join a Territorial unit. Soon after I found myself in France, and for several months did "my bit" to the best of my knowledge and ability. Later my division was ordered to the Balkans. Conditions of life here were different, and after sticking the rigours of climate and service as well as I could I knocked up, was invalidated home, and finally "turned down" by a medical board as unfit for further military service on account of ill health.

To my intense surprise and disgust, on my return home I find vigorous young men still filling posts of house-surgeon and house-physician at various London hospitals. At one special hospital which I have in my mind there are two house-surgeons, senior and junior, while to cap it all an athletic young gentleman is acting as clinical assistant. Another point—but here I must confess personal interest perhaps prejudiced me—I applied for a public health appointment to one of the London boroughs, hoping that such a post would suit my health while permitting me in my spare time to give lectures and demonstrations to R.A.M.C. men in training. What was my surprise to find that five of the six candidates up were men of military age and apparently in the pink of condition, while the man who did get the post already held a similar appointment at the same salary, except that it was in the country and he preferred being in town. Another public health post I applied for was given to a woman. So here I am, Sir, in indifferent health, with my old people to support, no money saved, seemingly no chance of municipal employment while slackers stay at home; but, thank Providence and the War Office, I have £46 gratuity in my pocket, and a firm resolve to keep going till the "Last Post" blows for me.

Yes, Sir, if I had my way I would conscript more doctors in a week than your patriotic appeals would bring in a year; and, after all, mine would be the saner method, as compulsion now, when the need is greatest, is

better than compulsion twelve months hence, when perhaps the harm to our troops would have already been done.—I am, etc.,

May 8th.

CAPTAIN R.A.M.C.(T.).

SIR,—There is now no doubt as to the urgent need of many more medical men for service in the Royal Army Medical Corps. There is also need that many should remain to attend the civil population at home. The ideal to be aimed at is that these should be justly apportioned.

Those who are in all ways—physically, professionally, and by reason of their surrounding circumstances—most suitable, should be compelled to serve, otherwise injustice arises. Under the voluntary system it is the men whose consciences are most acute, who are most willing to put their country's needs before their own, who are the first to offer themselves, while at the other extreme are those, no doubt a very small but still existing minority, who put their own interests first, and would profit by the sacrifices of others. These last it is useless for you to appeal to; but in between are many who would willingly offer their services but who hang back because their responsibilities are great, and their positions more difficult because of those who will not play the game.

The country has decided that compulsion is right and necessary for the fighting services in these times of danger. Why is it otherwise with the medical service?

Sir T. Clifford Allbutt and Sir W. Osler, in their appeal for voluntary enrolment, say, "with conscription the task of selection *might* fall into the hands of local lay tribunals, the voluntary scheme provides that in each district it falls to a local committee of medical men, whose professional knowledge," etc.

If it is possible for Local Medical Committees to deal with an adequate number of men under the voluntary system, why should it not be possible for them to do so under conscription?

Why should compulsion be looked upon, as it appears to be, as something of which to be ashamed? It is compulsion only for those who would shirk their proper responsibilities; for the rest it is merely just and equitable organization, and would, I am convinced, be warmly welcomed by the very great majority of the profession.

In your leading article (May 6th) you say "no man is really in a position to select himself—that is, to decide whether he should enter the medical service or stay at home." That is exactly what the enrolment scheme invites each man to do. Compulsion means that every medical man of military age is bound to offer himself, and the tribunal, which, if properly constituted, as it could be, is best able to judge whether he is suitable, decides for him. I myself am above the present military age, but, should the age limit be raised, I should still more warmly welcome compulsion as relieving me of a great load of responsibility in deciding for me between the calls of home and country, and this I believe to be the view of the great majority of medical men.—I am, etc.,

Edsall, May 6th.

WM. THORNFELLY.

PROPOSED ABOLITION OF REPORTS OF FACTORY SURGEONS.

A joint deputation representing the Incorporated Association of Factory Surgeons and the British Medical Association waited upon the Home Secretary on May 5th with reference to the recommendation of the Committee on Retrenchment in the Public Expenditure that the inquiries and reports of certifying surgeons on accidents occurring in factories and workshops should be dispensed with. Sir Thomas Flitcroft (Bolton), Dr. John Hedley (Middlesbrough), and Dr. W. F. Dearden (Manchester) represented the Certifying Factory Surgeons' Association, and Mr. Bishop Harman (London), Dr. J. W. Bone (Luton), and Dr. Alfred Cox, Medical Secretary, represented the British Medical Association.

Dr. Hedley said that the present was an inopportune moment for any alteration; the inspector in his district was unable to deal with the increased work due to the war. In view of the extraordinary amount of labour which had been introduced, largely female, it was difficult to see how the Act could be carried out unless the number of inspectors were increased.

It was pointed out further that there was a greater responsibility on the Government to see that workpeople were properly protected against accident. One member of the deputation stated that 10 per cent. of the reports of accidents made by employers were framed in such a way as to throw the responsibility on the injured person, who was more willing to tell a surgeon than his employer the true facts. Unless there were factory surgeons a large number of cases would never be reported or would be reported in a misleading manner.

Dr. Dearden presented a number of abstracts from employers' notices and certifying surgeons' reports to demonstrate the systematic sifting out of cases requiring definite action by the Department. They showed, he said, the impossibility of relying upon the employers' notice for a correct account of the nature and causation of an accident; the usefulness of the surgeon's report; the importance of the injured person's evidence as a determining factor in ascertaining causation; and the utility of surgical and scientific knowledge in deciding the actual causation of accidents from machinery, hot liquid explosion, and escape of poisonous fumes. His association was of opinion that the exceptional situation presented by the increase of unskilled labour in factories should be dealt with not by abolition of investigation but by extension of the certifying surgeon's function. He should be temporarily empowered to give instructions respecting safety, and even to direct any fencing of machinery which appeared necessary.

On behalf of the British Medical Association Mr. Bishop Harman said they unanimously supported the case presented by the factory surgeons. The saving of £12,500 seemed to be a policy of penny wise and pound foolish. If it were decided that reports were necessary there was no way in which they could be got so quickly and so cheaply as by employing the certifying surgeon.

Mr. Samuel, in reply, said he had to bear in mind two facts. One was that in respect to a very large class of industrial accidents, or accidents in mines and on railways, there never had been any question of certifying surgeons' reports. The system of controlling accidents in mines and on railways had proceeded without difficulties or drawbacks, the reports on the accidents being made only by persons who had not got medical qualifications. Secondly, Ministers of the Government had to be guided by results of expert inquiry.

A few years ago a committee was appointed to consider the whole question of accidents in workshops. It sat for more than two years, and among its members were three representatives of Labour—Mr. Ramsay MacDonald, Mr. Gill, and Mr. Vivian. Its sole desire was to safeguard every work from accidents, and to perfect the system of dealing with industrial accidents. It reported that the factory surgeons' reports were superfluous, and made a recommendation for their abolition, except in special cases where a special inquiry was thought to be necessary. A certifying surgeon was, of course, not an expert on fencing machinery or other safeguards, and when it was suggested that no one could make a proper report unless he had a knowledge of anatomy he did not know whether it could really be accepted as reasonable. Although a surgeon might be needed in the case of a finger being cut off to cure the wound, a factory inspector, who had been told that the finger had been cut off and saw the

injured person, did not require any anatomical knowledge to recognize the fact. He was advised by those who knew that in the majority of cases the certifying surgeon's report added nothing to the employer's report. There might be exceptional cases, he said, where a certifying surgeon's report might be of real value, but the great majority of them—there were many thousands during the course of a year—added nothing to the inspector's knowledge beyond what employers had told him. If information given by employers was inaccurate, the inspector always sent the report back for further details. The certifying surgeon's work would still, of course, be necessary, in existing circumstances, for certifying fitness, and also for industrial poisons and diseases which had to be dealt with under the Workmen's Compensation Act.

At the present time there was a great demand for doctors' services in every direction arising from the withdrawal of a great number of medical men from civil work to undertake military work, and this was specially a time when it was difficult to justify continuing to require a number of doctors all over the country to spend time in making reports which had been declared by an investigating committee to be superfluous, and which were largely duplicates of reports received from other quarters. So far as the certifying surgeons' fees were concerned, if their functions were limited, the remuneration would, of course, be diminished, but this was a time when adjustments could be made with the least hardship to doctors, as they could make up for any loss by taking over practices of medical men on military duty. Mr. Samuel went on to say that he was laying before Parliament shortly a bill dealing with similar points of economy with regard to the Home Office, and if he did not include this one his position in the House of Commons would be somewhat remarkable. He would be asked whether the economy of £12,500 was recommended by the Retrenchment Committee, whether a similar recommendation was made by a committee a few years ago, and if his own factory department advised him that certifying surgeons' reports were unnecessary and superfluous. To those questions he would have to answer "Yes." He would also be asked if the reports should be continued, and if the expenditure ought to be incurred, and he would have to answer "No." To be consistent, it would be impossible for him to maintain an attitude which would involve the continuance of the expenditure and also involve calling upon doctors to make these reports when their services were demanded elsewhere. He had considered the memorial sent in by the association, and it had not convinced him that a case had been made out. Although the deputation had instanced one or two cases that day which might be weighty, he must frankly say that the statements they had made had not led him to modify the opinion he formed on the documents which had been published.

REDUCTION OF NOTIFICATION FEES.

In connexion with the decision of the Government to reduce the fees paid for the notification of infectious disease, it may be of interest to publish the following communication addressed by the British Medical Association to the President of the Local Government Board and the reply received:

British Medical Association,
429, Strand, London, W.C.
May 1st, 1916.

Sir,

I understand that to-morrow the House of Commons will consider the amendments made by the House of Lords in the Local Government Board (Emergency) Bill. Is it too late to ask that the action of the Government in reducing the fees paid for the notification of infectious diseases shall be reconsidered? We have already made our protest, but our post during the past three weeks shows that this reduction is hotly resented by the great majority of the general practitioners of the country, who freely stigmatize the reduction as an exceedingly shabby piece of legislation and as stealing a march upon the large number of practitioners who are now on active service.

The Association is unwilling at this time to make the task of the Government more difficult by raising any organized opposition on the question, but desires to make it clearly understood that the absence of this opposition does not indicate the want of strong feeling on the subject.

I am instructed to express the hope that even yet you may see your way to drop the clause in the bill to which objection is taken.

I am, Sir, your obedient servant,
ALFRED COX,
Medical Secretary.

The President,
The Local Government Board.

Local Government Board, Whitehall, S.W.,
May 2nd, 1916.

Sir,
I am directed by the Local Government Board to acknowledge the receipt of your letter of the 1st instant and to state that the subject to which it relates will receive the attention of the Board.

I am, Sir, your obedient servant,
(Signed) H. C. MONRO,
Secretary.

The clause providing for the reduction was, as stated last week, finally adopted by the House of Commons on May 2nd.

At a meeting of the Executive Committee of the National Medical Union held at 346, Strand, on May 4th, 1916, the following resolution was passed:

That the Executive Committee of the National Medical Union express their strong disapproval of the action of the Local Government Board in attempting to effect any reduction in the notification fees. They urge that all local non-panel bodies should pass strong resolutions on this matter and forward them direct to their local members of Parliament, and that each secretary be advised to circulate a petition among the local profession and forward these petitions, when complete, to the secretary of the National Medical Union, 346, Strand. Such resolutions and petitions to be then referred to the Parliamentary Committee of the Union with the object of taking such further action as may be necessary to place the matter before both Houses of Parliament.

A COUNTRY DOCTOR writes: Recently an insurance patient of mine developed diphtheria. The local medical officer of health will not disinfect the patient's house until a negative result is obtained by bacteriological examination. In this case three swabs were sent; the postage of each, which I had to pay, was 2½d. So actually I spent, with the postage of the notification, 8½d.; in addition, later I shall have to send in my account. The last time I had to apply three times for the money, and a receipt by post will be expected when the money comes. I can see in the future a fair prospect of the postage alone often coming to more than the Government think the notification worth. It is not a big matter in actual money to the individual practitioner, but I certainly think it is a warning of what we may expect later when the terms of the National Insurance are reconsidered.

INSURANCE.

DEPRIVATION OF BENEFIT.

APPEAL FROM REFEREE'S DECISION.

In the House of Commons, on March 29th, Mr. Stuart-Wortley asked the Chairman of the Joint Committee of Insurance Commissioners the following questions:

Whether it has been found that a woman insured in the approved society conducted by the Prudential Assurance Company, and receiving a weekly allowance as insurance benefit therefrom, could be deprived of that benefit by the individual decision of a referee appointed by the Prudential Company without previous knowledge of the case and without consultation or communication with her panel doctor; whether a woman thus deprived of benefit or otherwise treated with harshness could under No. 13 (30b) of the approved society's rules be required, as a condition of obtaining redress or getting her case submitted for impartial inquiry, to deposit a sum which might amount to so much as £1, and in case of an adverse decision to forfeit the deposit and pay the whole of the expenses of the arbitration; whether along with the notice of deprivation of benefit any information was given to the insured person as to the existence of a right of appeal or the nature of the steps to be taken to bring about such appeal; whether the said Rule 13 was one of forty-eight rules which cover seventy-two pages of the printed book; and whether it was proposed to leave unaltered a state of the law which made benefits so precarious and redress so difficult to persons of small means from whom compulsory contributions had been levied?

Mr. C. Roberts replied as follows: It rests with the society of which an insured person is a member to determine, subject to the member's right of appeal, whether the facts of a given case justify the payment of benefit, and any medical evidence obtained in accordance with the rules is for the guidance of the society in coming to a decision. In the case of the particular society named in the question, I understand that where a member is required to submit herself for special medical examination under the rule referred to, steps are now taken to inform the doctor by whom she has been attended, and that, where the matter is referred to a medical umpire, it is not the society's practice to require any deposit, although the payment of a deposit is authorized by the rule. I am also

informed that in all cases in which payment of benefit is suspended on the report of a medical referee the member is now furnished with information as to the course which she may pursue if dissatisfied with the society's decision. The particulars given in the fourth part of the question are substantially correct. Copies of the rules are available to members on payment of a sum not exceeding 2d. As regards the last part of the question, I am sending the right hon. gentleman a copy of a circular issued by my department in May last on the subject of procedure in disputes between societies and their members.

Mr. Stuart-Wortley: Do the changes which the hon. gentleman has announced date since the inquiry into this particular case?

Mr. Roberts: I am not quite sure of the date, but I think the changes have been made comparatively recently.

We have received from Dr. W. James Susman (Henley-on-Thames), chairman of the Oxfordshire Panel and Local Medical Committee, a letter, in the course of which he writes:

Mr. Charles Roberts's answer in certain particulars is only partially correct, whilst in others he has been absolutely misinformed.

Perhaps it would be as well to state clearly from personal experience what happens when the Prudential Assurance Society suspects that one of its members is malingering. The member receives a written notice either that

- (a) The society's doctor will call on the next day (it is exceptional for a longer notice than twenty-four hours to be given); or
- (b) The member is required to attend at a stated place for examination. In some cases this may involve a whole day's travelling and a complicated railway journey.

At the same time the doctor in attendance on the patient is, as a rule, but not always, notified that the examination is to take place. More often than not this notice only arrives on the day fixed for the examination. In some cases no hour is given for the consultation, and if the time is stated the medical referees usually does not keep to it. From my own experience, I can definitely state that the examination is of the most cursory character—the average time is apparently about three minutes. In not a single case that I have come across (and there are many) has the medical referee had the benefit of hearing the patient's past medical history from his (or her) own medical attendant.

As the result of this medical examination the society has the power, and frequently exercises it, of suspending the member from further sickness benefit. Mr. Charles Roberts states that in these cases "the member is furnished with information as to the course which she may pursue if dissatisfied with the society's decision." I do not know of any case in which a member was provided with this information, but I know of many in which it was not done.

Now if these are facts—and I can guarantee that they are—there is obviously something very wrong.

Quite apart from the discourtesy shown to the medical attendant, such methods cannot provide the society with the requisite information for forming a correct judgement upon the case, and as for the wretched member, such treatment surely savours of the autocratic and brutal methods of the Hun.

Unfortunately, I believe it to be a fact that the Commissioners have no power over the internal affairs of a society. Further, so great is the power that a society like the Prudential exercises, that very few members of Parliament can be induced to take the matter up.

If, then, any change is to be effected it must be by the concerted action of the medical profession, and I would suggest that as a start any medical man having a similar experience to mine should communicate the details to me as soon as possible. By tabulating a large number of cases we may be able to influence public opinion to such an extent that the society will be forced to take action.

I myself know of one case where a patient who had been declared by the authorities at a well-known hospital to be in a serious state of consumption, was considered by the society's referee "fit to resume work," and was sent to work against the advice of the hospital authorities and her own medical attendant. And this after three minutes' examination.

In another case an epileptic domestic servant was declared "fit for work," but unfortunately for her, with her bad medical history, no one will employ her.

STOCK MIXTURES.

As has already been reported, the Association has for some time been conferring with the Pharmaceutical Society of Great Britain with regard to the list of preparations which are, in the opinion of these two bodies, or failing agreement adjudicated by the Commissioners, capable of being stocked in bulk without deterioration. Under the current tariff Panel Committees will be in a position, if they so choose, to select from this list when published a number of formulæ not exceeding ten which shall then be dispensed at the special fee of 2.3d.

The penultimate stage of the protracted negotiations was reached on May 9th when the Commissioners sat to hear representatives of the British Medical Association and Pharmaceutical Society as regards six formulæ as to which agreement had not been reached. After consideration of the arguments on both sides, the Commissioners found in favour of the contention of the Pharmaceutical Society, whereupon the representatives of that body made an alternative suggestion for the composition of the mixtures in question, which was accepted on behalf of the British Medical Association. The list will be issued forthwith by the Commissioners, and will contain twenty-eight formulæ based on a compilation and comparison of the formulæ which appear to be in most common use in insurance practice throughout the country.

ASSOCIATION NOTICES.

BRANCH AND DIVISION MEETINGS TO BE HELD.

LEINSTER BRANCH.—Dr. William Doolin, Acting Honorary Secretary (50, Fitzwilliam Square, Dublin), gives notice that the annual meeting of the Branch will be held at the Irish offices of the Association, 16, South Frederick Street, Dublin, on Monday, May 15th, at 4.30 p.m. Agenda: Appointment of officers. Adoption of revised organization rules and ethical rules. Receive report of financial position. Apply for supplementary grant for 1916 of such amount as the meeting may decide. Any other business.

SOUTHERN BRANCH.—Mr. James Green, Honorary Secretary, gives notice that the Council of the Branch, at its meeting on May 18th, will nominate candidates for the following offices for the ensuing year—namely, the president-elect, two vice-presidents, the honorary secretary, and the honorary treasurer. The Honorary Secretary is prepared to receive nominations, in writing, from any three members of the Branch for any such office on or before June 1st; failing the receipt of such nominations, the nominees of the Branch Council will be duly elected, in accordance with Rule 5 (Organization Rules).

VACANCIES.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

BAINSLEY: BECKETT HOSPITAL AND DISPENSARY.—House-Surgeon. Salary, £250 per annum.

BELFAST MUNICIPAL SANATORIUM.—Temporary Assistant Resident Medical Officer. Salary, £200 per annum.

BIRMINGHAM GENERAL DISPENSARY.—Resident Medical Officer. Commencing salary, £250 per annum.

BOITON INFIRMARY AND DISPENSARY.—Second House-Surgeon. Salary, £200 per annum.

BOITON UNION.—Senior Assistant Medical Officer for the Townleys Hospitals. Salary, £250 per annum.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £150 per annum.

BURY INFIRMARY.—(1) Lady Senior House-Surgeon; (2) Lady Junior House-Surgeon. Salary, £250 and £150 per annum respectively.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST. Victoria Park, E.—Assistant Resident Medical Officer. Salary, £150 per annum.

DEWSBURY COUNTY BOROUGH.—Lady Medical Practitioner in connexion with Scheme of Maternity and Child Welfare. Salary, £300 per annum.

DUBLIN: GUEST HOSPITAL.—Assistant House-Surgeon. Salary, £120 per annum.

HASTINGS: EAST SUSSEX HOSPITAL.—House-Surgeon. Salary, £100 per annum.

KENT EDUCATION COMMITTEE, Maidstone.—School Medical Inspector and Medical Officer of School Clinic. Salary, £350 per annum.

KING EDWARD VII HOSPITAL FOR OFFICERS, Grosvenor Gardens, S.W.—Resident Medical Officer.

LABORATORIES OF PATHOLOGY AND PUBLIC HEALTH, 38, New Cavendish Street, W.—(1) Bacteriologist; (2) Laboratory Assistant.

LEEDS PUBLIC DISPENSARY.—Two Resident Medical Officers. Salary, £300 per annum.

LEWISHAM BOROUGH.—Tuberculosis Dispensary Medical Officer. Salary, £250 per annum.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—Assistant House-Surgeon (non-resident). Honorarium, 120 guineas per annum.

MANCHESTER CHILDREN'S HOSPITAL, Pendlebury.—Two Resident Medical Officers. Salary, £100 per annum and £5 per month war bonus.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Lady House-Surgeon. Salary, £120 per annum.

MANCHESTER: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Resident Surgical Officer. Salary, £150 per annum.

NEW HOSPITAL FOR WOMEN, Easton Road, N.W.—(1) Senior Clinical Assistant to Out-patients; (2) Two House-Surgeons; (3) House-Physician and Obstetric Assistant.

PADDINGTON GREEN CHILDREN'S HOSPITAL, W.—House-Surgeon (Lady). Salary, £80 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Clinical Assistant. Salary, £110 per annum.

ROYAL COLLEGE OF SURGEONS OF ENGLAND.—(1) Two Members of the Court of Examiners; (2) Hunterian Professors and Arris and Gale Lecturer.

SALISBURY GENERAL INFIRMARY.—(1) House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN.—Junior Lady House-Surgeon. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Physician. Salary, £120 per annum.

SHEFFIELD UNION HOSPITAL.—Resident Assistant Medical Officer. Salary, £400 per annum.

VENTNOR: ROYAL NATIONAL HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST. Assistant Resident Medical Officer.

WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Senior House-Surgeon. Salary, £250 per annum.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

BARENDET.—On May 3rd, at 65, Rodney Street, Liverpool, W., the wife of Frank Hugh Barendt, M.D.Lond., F.R.C.S.Eng., of a daughter.

BLACK.—At Springs, Transvaal, South Africa, on the 7th inst., the wife of James Black, M.D.Edin., a son.

JOY.—On the 3rd May, at Manor House, Tamworth, Staffs, the wife of C. H. Joy, M.D., of a son.

DEATH.

JACKSON. Fell asleep on Sunday, April 30th, at 56, Tierney Road, Streatham Hill, Philip John Jackson, M.B.C.S.Eng., L.S.A., Medical Officer, South-East District, General Post Office, aged 65 years.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 8 p.m.—Annual general meeting.

TUESDAY.

ROYAL SOCIETY OF MEDICINE: SECTION OF THERAPEUTICS AND PHARMACOLOGY, 4.30 p.m.—Annual general meeting. Discussion on The Treatment of Diabetes by Alimentary Rest, to be opened by Dr. O. Leyton.

SECTION OF PSYCHIATRY, 6 p.m.—Annual general meeting.

THURSDAY.

ROYAL SOCIETY OF MEDICINE: SECTION OF DERMATOLOGY, 4.30 p.m., Exhibition of Cases. 5 p.m., Annual general meeting. Cases.

FRIDAY.

ROYAL SOCIETY OF MEDICINE: SECTION OF OTOTOLOGY, 5 p.m.—Annual general meeting. Mr. W. M. Mollison: Note on the Monochoord. Cases and Specimens.

SECTION OF ELECTRO-THERAPEUTICS, 8.30 p.m.—Annual general meeting. Exhibition of X-ray and Electro-Medical Apparatus, etc.

SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11, Chandos Street, W., 5.30 p.m.—Major J. M. Atkinson, R.A.M.C.: Cerebro-spinal Fever. Dr. A. C. Stevenson: Nodules in Lung from a case of Morphine Injectors' Septicæmia (Whitmore's Disease), and Cultures of a Bacillus Isolated from the Same.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
	MAY.
12 Fri.	London: Executive Subcommittee of Central Medical War Committee, 2.30 p.m.
15 Mon.	Leinster Branch, Annual Meeting, Dublin, 4.30 p.m.
17 Wed.	London: Central Medical War Committee 2 p.m. (provisional).

CURRENT NOTES.

SUPPLY OF PETROL TO DOCTORS.

THE Medical Secretary has written to the Secretary of the Departmental Committee on Petrol Supplies again urging the special difficulties of doctors, pointing out that in some cases they have been unable to undertake country visits because they could get no petrol; and asking whether a guaranteed supply for professional purposes may shortly be expected.

REDUCTION OF NOTIFICATION FEES.

The chairman of the annual meeting of the London and Counties Medical Protection Society, in his address, as reported last week, criticized the action of the British Medical Association in suggesting that 1s. was an adequate fee for notifying cases of measles. Dr. Fowler's attention has been drawn to the fact that this does not correctly express the course taken by the Association. As stated in the annual report of Council, the deputation to Mr. Hayes Fisher said that if the Government insisted upon the reduction of these fees, against the expressed wish of the profession, medical practitioners might be willing, as their contribution to retrenchment, to accept during the war a nominal fee of 1s. for the notification of measles only. This is, of course, not at all the same as saying that 1s. was an adequate fee for the notification of measles. The Association has repeatedly and strongly protested against any reduction of these fees.

On this subject we are asked to publish the following correspondence:

138, Harley Street, W.
May 15th, 1916.

My dear Harman,

At our annual meeting I wish to ask a question: "Is it true that the deputation from the head office of the British Medical Association to the Local Government Board admitted that 1s. would be a sufficient fee for notification of infectious diseases?" If the answer is "No," the matter drops; if the answer is "Yes," then I move:

That the Marylebone Division expresses its indignant surprise that the British Medical Association should have made such a statement and asks the Representative Meeting to express its disapproval and also its instruction to try to have the 2s. 6d. fee restored.

Yours sincerely,
FRED. J. SMITH.

108, Harley Street, W.
May 16th, 1916.

Dear Dr. Smith,

Cross-examining counsel loves to put to the witness in the box a question and demand a plain Yes or No. There are not many questions that can be answered thus simply. But happily your question can be truly answered in this curt fashion.

You ask—"Is it true that the deputation from the head office of the British Medical Association to the Local Government Board admitted that 1s. would be a sufficient fee for notification

of infectious diseases?" I answer—"No," and without hesitation.

At our interview with the Government representatives we took up a definite and unassailable stand against the statement of the Retrenchment Committee that the filing of a notification form involved no more than "clerical labour worth one shilling." This statement, we maintained, showed a total lack of appreciation on the part of the Government advisers of what the notification of a disease meant and involved. We pointed out that serious responsibility was involved, and one that laid the doctor open to an action at law in case of a real or alleged error on his part. In rubbing in this statement I confined myself to my own knowledge of the notification of ophthalmia neonatorum, and the case was admitted by Mr. Hayes Fisher, the Government representative, who happened to have more than an ordinary knowledge of this disease. Not only did we repudiate the Government position, but we urged that the present fee was all too small for such work. We admitted that the same heavy responsibility did not hold in the case of the notification of measles, for no parent would be likely to be disturbed at the notification of a fever which was unfortunately held by most to be too trivial for the care of a doctor. And that as the fee for the notification of measles was already on a different basis to that of other notifiable diseases the Government might logically claim to treat it separately. But we made it clear that any exceptional fee for measles was to be considered only "as a reduction on taking a quantity," and a war economy concession, and not the concession of the professional position. I should like your permission to publish this correspondence in the medical journals.

Yours sincerely,
(Signed) N. BISHOP HARMAN.

REPORT OF ROYAL COMMISSION ON VENEREAL DISEASES.

The bearing of the recommendations of the Royal Commission on the interests of medical practitioners and hospitals is to be the subject of consideration by a joint meeting of the Medico-Political, Public Health, and Hospitals Committees. The Parliamentary Subcommittees, strengthened for the purpose by representatives of the Public Health and Hospitals Committees, will meet on May 24th to prepare a draft report.

INSURANCE.

The Use of the Term "Rep. Mist."

On May 3rd the Medical Secretary appeared before the Insurance Commissioners on behalf of the Hampshire Panel Committee to support its request that the use of the term "Rep. mist." should be continued in the county under suitable safeguards. Drs. Rogers and Roberts appeared on behalf of the Panel Committee, and the Pharmaceutical and Insurance Committees appeared in opposition, the former being assisted by a representative of the Pharmaceutical Society. The decision of the Commissioners has not yet been made known.

Scope of Service under Medical Benefit: Sight Testing.

On the invitation of the Surrey Local Medical Committee the Medical Secretary on May 10th gave evidence in an inquiry before Medical Referees, the object of which was to settle whether the estimation of refraction by means of test type and trial lenses did or did not come within the services required of a medical practitioner under his agreement with an Insurance Committee. The referees

were Mr. Fischer Williams, barrister-at-law, Dr. Adam Fulton, and Mr. Bishop Harman. Dr. Lankester, chairman of the Surrey Local Medical Committee, conducted the case on behalf of that Committee, Mr. Bell, the Clerk of the Insurance Committee, appeared to support the Panel Committee, and Mr. Gwyer presented the Commissioners' case. The decision is awaited with great interest, as though technically it will only apply to the case in question it will no doubt serve as a precedent, settling whether panel practitioners are expected to test refraction by the means used in this case if they are able to do it.

THE INCREASE OF MOTOR LICENCES.

THE Automobile Association and Motor Union has received a great number of protests against the proposed new taxes from motorists resident in all parts of the United Kingdom. In the main these protests emanate from the professional and business classes, such as surveyors, doctors, clergymen, farmers, commercial travellers, veterinary surgeons, etc., and it is clear that if the present proposals are passed into law they will operate harshly against men of moderate means and the owners of cars used for utilitarian purposes. The Automobile Association and Motor Union has already approached the Chancellor of the Exchequer and recommended (a) reduction of the tax on the 16-26 h.p. class; (b) relief for old cars; (c) abatement or exemption where cars are used for public work, and (d) modification of the proposed taxes on motor cycles and the rejection of the horse-power basis for this class of vehicle. The proposed abrogation of the licences already issued is also being carefully considered. These licences indicate that having paid the amount stated the person in question is entitled to use his car or motor cycle up to December 31st, 1916, without further payment. It is clear that many motorists only paid this duty on the assumption that the terms of the licence would be adhered to by the Government, and that by such payment they were guaranteed the use of their cars for the whole year without further duty being imposed. By reference to paragraph 103 of the annual report of the Council of the British Medical Association, published in the SUPPLEMENT to the JOURNAL of May 6th, it will be seen that on the introduction of the Budget in April the British Medical Association communicated with the Chancellor of the Exchequer to consider the desirability of leaving the present motor taxes untouched, so far as concerned cars used by medical practitioners for professional purposes only, and that a reply had been received that the whole question was again under consideration.

Meetings of Branches and Divisions.

LANCASHIRE AND CHESHIRE BRANCH: ROCHDALE DIVISION.

THE annual meeting of the Division was held at Rochdale on April 27th, when Dr. GEDDES, the Vice-Chairman, presided.

Annual Report.—The SECRETARY read the annual report. The financial statement showed a balance in hand of £3 12s. 3d.

Election of Officers.—The following officers were elected for the year:

Chairman: Dr. Geddes (Heywood).

Vice-Chairman: Dr. Lord (Castleton).

Secretary and Treasurer: James Melvin (Rochdale).

Representative to Annual Meeting: Dr. Lord (Castleton).

Deputy Representative: Dr. Carse (Rochdale).

Executive Committee: The officers, together with Drs. Ashcroft of Littleborough, and Harris, Kilroe, and Wilson of Rochdale.

Ethical Rules.—It was resolved:

That the Rochdale Division hereby adopts the revised rules governing procedure in ethical matters of a Division not itself a Branch, as approved by the Annual Representative Meeting, 1915, without modification and in substitution for any ethical rules now in use by the said Division.

SOUTH-EASTERN OF IRELAND BRANCH.

THE annual meeting of the South Eastern of Ireland Branch was held at Kilkenny on May 3rd, when Dr. JAMES was in the chair. Dr. A. B. Stephenson was installed as President for 1916 and 1917. A cordial vote of thanks was passed to the outgoing President, Dr. J. Quirke.

Election of Officers.—The following officers were elected:

President-elect for 1916-17: Dr. M. Mitchell (Johnstown).

Treasurer: Dr. J. H. Jellett (Waterford).

Honorary Secretary: Dr. P. Grace (Kilkenny).

Representative for Annual Representative Meeting: Dr. T. Laffan (Cashel).

Deputy Representative: Dr. Joseph Power (Ardinnan).

Representative on Irish Committee: Dr. J. V. Ryan (Carlow).

Association Notices.

GRANTS IN AID OF SCIENTIFIC RESEARCH.

THE Council of the British Medical Association is prepared to receive applications for grants in aid of Research into the Causation, Treatment, or Prevention of Disease. Preference will be given to medical practitioners and to applicants who propose to investigate problems directly related to practical medicine.

Applications for grants must be received not later than June 17th, 1916, and must be made on the prescribed form which, together with the Regulations governing such grants, can be obtained on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

BRANCH AND DIVISION MEETINGS TO BE HELD.

EAST YORKSHIRE AND NORTH LINCOLN BRANCH: EAST YORKSHIRE DIVISION.—Mr. H. L. Evans (101, Prince's Avenue, Hull) gives notice that the annual meeting of the Division will be held in the Board Room of the Hull Royal Infirmary, at 8.15 p.m., on Friday, June 9th. Business: To receive the annual report and financial statement. To elect officers.

KENT BRANCH.—Dr. E. A. Starling, Honorary Secretary (Chillingworth House, Tunbridge Wells), gives notice that the third annual meeting of the Kent Branch (which this year will be only for the transaction of necessary business) will be held on Wednesday, June 7th, 1916, at 5.30 p.m., at the Royal Star Hotel, Maidstone. The Council recommends that there should be no change in the officers of the Branch, and also the holding of the annual meeting in Chatham on the usual lines when the country has returned to a more normal condition after the war.

LANCASHIRE AND CHESHIRE BRANCH: ST. HELENS DIVISION.—Dr. F. J. Knowles, Honorary Secretary (Victoria Square, St. Helens), gives notice that the annual general meeting of the St. Helens Division will be held at St. Helens on Tuesday, May 23rd, 1916.

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman (Honorary Secretaries) give notice that the annual general meeting of the Branch will be held at 429, Strand, W.C., on Tuesday, June 27th, at 4 p.m. The business will be: (1) Report of scrutineers as to the election of new officers. (2) The annual reports of council and of representatives of the Branch on the Central Council. (3) Alteration of Rule 7 b. (4) The adoption of the Revised Ethical Rules as approved by the Annual Representative Meeting, 1915. (5) President's address: Medical Administration of Modern Armies.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.—Mr. C. Edward Wallis, Honorary Secretary (13, Queen Anne Street, W.), gives notice that the annual general meeting of the Marylebone Division will be held at No. 108, Harley Street, on Thursday, May 25th, 1916, at 5.30 p.m., to receive the annual report of the Executive Committee; to elect the officers of the Division for the coming year; instructions to Representatives at Representative Meeting on matters referred to Divisions (vide BRITISH MEDICAL JOURNAL SUPPLEMENT, May 6th, 1916); nominations to the Central Council; nomination to the Branch Council; adoption of model ethical rules.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—Drs. W. J. Greer and L. Freeman Marks, Honorary Secretaries, give notice that the annual meeting of the Branch will take place in Cardiff on June 8th for the election of officers and other business.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

WE are informed by the Honorary Secretary (Dr. Sidney C. Lawrence) of the Society of Members of the Royal College of Surgeons of England that the following letter has been addressed, on behalf of this society, to the Royal College of Surgeons of England and the conjoint advisory committee of that College and the Royal College of Physicians of London:

To the Secretary, Royal College of Surgeons of England.
Sir,—At a recent meeting of the Council of this society the resolution, as under, was passed unanimously, and I was

instructed to acquaint you with the same in order that it may be brought to the notice of your Council and of the advisory committee of the English Royal Colleges of Physicians and Surgeons.

Resolution.

That this society is strongly of opinion that the paid services of medical men over military age should be more utilized for whole or part time duty at home barracks, civil and military hospitals, etc., so as to free younger men for active service abroad; that where medical men, ineligible for war duties, could not be found for out-patient departments of civil hospitals or tuberculosis or school medical work, such departments should be at once closed for the duration of the war.

That the Government should withhold their approval of the appointment of men of military age to vacancies arising in the Poor Law or public health services or in any public appointment until the conclusion of the war, and that in every case such appointments be only made for the duration of the war or until six months after the conclusion of peace, as under present conditions fair competition for such posts is impossible, and shirkers are thereby unduly favoured.

INSURANCE.

TRAVELLING EXPENSES OF PANEL COMMITTEES.

THE following letter has been addressed by the British Medical Association to the Secretary of the National Health (Joint) Committee:

British Medical Association,
429, Strand, London, W.C.,
May 8th, 1916.

SIR,

Travelling Expenses of Doctors of Panel Committees.

At different times during the past two years representations have been made to the Association by County Panel Committees in favour of their being allowed to pay the travelling expenses of their members.

The Insurance Acts Committee has circularized the whole of the Panel Committees in England, Scotland, and Wales, inquiring whether they are of opinion that steps should be taken to provide that it should be possible to defray the travelling expenses of members of Panel Committees out of the statutory allotment made towards the expenses of those Committees from the Medical Benefit Fund.

The replies have satisfied the Insurance Acts Committee that there is an undoubted desire that the statutory allotment should be available for this purpose, and it is evident that many Panel Committees believe that the payment of travelling expenses would help to secure a better attendance at their meetings.

The fact that the members of Panel Committees are engaged not only in protecting the interests of insurance practitioners but in doing work which is an essential part of the administration of the National Health Insurance Acts, seems to the Insurance Acts Committee to be an irresistible reason why the Panel Committee should be entitled to use its funds for such a purpose, and the request seems a particularly reasonable and modest one, seeing that the money out of which the expenses would be paid comes out of the pockets of the doctors themselves.

I am therefore instructed to express the hope that the Commissioners will take, on the first available opportunity, the steps that are necessary to allow travelling expenses to be paid by those Panel Committees that are in favour of making such payments.

I am, Sir, your obedient servant,
ALFRED COX,
Medical Secretary.

The Secretary of the National Health (Joint) Committee,
Wellington House, Buckingham Gate, S.W.

CORRESPONDENCE.

PAY UNDER INSURANCE ACT FOR YEAR 1914.

DR. FRANCIS E. TOWNSEND, M.D. (Normanby, Yorks), writes: Dr. Powers's letter in the SUPPLEMENT of May 6th, p. 106, is typical of the treatment the doctors are receiving at the hands of the Committees and Commissioners. I with others quite thought that the Commissioners would act honourably with the contracts made with us, and I regret to say it is not so. We certainly contracted for 7s. a head for attendance and 1s. 6d. drugs + floating 6d. per annum on insured persons, and we who do the whole of the dispensing in country practices where there are no chemists are entitled to the full 2s. (1s. 6d. for drugs and 6d. (floating)). In 1914, we of the North Riding of York-

shire received on the number of patients on our panels at the beginning of each quarter 1s. 9d. for the first three quarters, for the fourth quarter 1s., and for drugs 6d. for the first three quarters and nothing for the fourth quarter; but the Committees deducted 25 per cent. from the drugs account for second and third quarters. They paid the drugs account for temporary residents and mileage (sufficient to buy four tyres for a motor car at the most), and having waited seventeen months for the balance, we have been obliged to sign a final statement for 1914, accepting on the mean number of patients for the year 6s. 8.985d. per patient for attendance and 1s. 9.66d. for drugs and floating 6d., no mention being made, although this is the final settlement of pay, for temporary residents. I have kept all vouchers for the year, and will be pleased to submit same to you. Our work is doubled, not to mention the constant correspondence with the Committee, signing of certificates, and often much unpleasantness caused between the patient and doctor by the certification rules, the keeping of record cards, and the constant signing and posting (we have to pay all postage) of medical cards to Committees. No labourer, from the lowest to the most skilled mechanic, would put up with such treatment from an employer for one week. Can nothing be done by the Association to take a test case to the courts and see if a county court judge would get us our rights?

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Fleet Surgeon L. S. Whitman, M.B., to the Fox; A. W. B. Lyesay to the Victory, additional, for disposal; Staff Surgeons G. E. G. Vickery, M.B., and A. J. Wernet, M.B., to the Pembroke; B. S. Robson, M.B., to the Vivid; H. H. Babbington, to the Vivid, for disposal; E. Cameron, M.B., to the Victory, for disposal; F. J. Gowan to the Fearless; A. D. C. Cummins to the Victory, additional, for disposal; Surgeons K. H. Hole and G. F. Syme have been promoted to the rank of Staff Surgeon for meritorious examinations. Surgeons H. W. Nicholls to the Vivid; G. B. Cockrem, R. F. P. Cory, to the Victory; J. G. Bond, M.B., G. F. Syme, to the Pembroke; A. Fairley to the Victory, additional, for disposal; R. J. G. Parnell to the Hussar, Temporary Surgeons R. B. Boston, M.B., to the Victory; R. Lyon, M.B., H. Wetherbee, and C. M. Williams to the Pembroke; W. G. Robertson to the Vivid; A. C. Ballance, M.B., to the Orin; W. MacMurray, M.B., and A. G. Evans to the Mount Stuart Hospital; P. C. Woodlatt, F.R.C.S., to Penbroke Dock Hospital; R. W. Brander, W. E. Boyd, and G. J. C. Smyth, M.B., to the Pembroke, additional, for disposal; H. F. McNally, M.B., to the Hampshire; S. S. Beare to the Victory, additional, for disposal; A. O. Courtis to the Caesar; H. Whyte to the Victory, additional, for Haslar Hospital.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeons C. F. A. Hereford to the Vivid, additional, for disposal; O. H. F. Atkinson to the Powerful, for Trevelick Quarters. Surgeon Probationers T. F. Broderick, V. R. O'Connor, S. J. Healy, A. C. Halliwell, T. L. Hillier, L. H. Bartram, H. G. Taylor, T. G. Evans, P. S. Horrocks, E. K. Macdonald, J. D. M. Cardell, D. A. Cunningham, N. T. Williamson, E. R. Peirce, C. R. Bency to the Victory additional, for Haslar Hospital; V. M. Syme to the Peteret. To be Surgeon Probationers: H. Thomson, J. K. Murray, E. Gray, G. E. Iae, N. B. Gadsby, D. L. M. Tod, W. T. Benson, J. N. Gale, SGT. B. B. Gray, J. Allan, J. W. S. Blacklock, D. C. Lamond, M. K. Jardine, G. Paterson, G. W. T. H. Fleming, P. L. Ewan, O. Gray, F. W. Leinarchand, A. B. Macdonald, E. M. Fraser, E. A. Sparks, D. McClean, D. C. Clark.

ARMY MEDICAL SERVICE.

Surgeon-General T. M. Corker, C.B., K.H.P., is retained on the active list under the provisions of Articles 120 and 522, Royal Warrant for Pay and Promotion, 1914, and to be supernumerary.

Colonel J. Maher, C.B., to be temporary Surgeon-General whilst a Director of Medical Services.

Temporary Colonel A. W. Mayo Robson, C.V.O., F.R.C.S., relinquishes his temporary commission.

Temporary Colonel R. R. Sleman, M.D. (Lieutenant-Colonel R.A.M.C.T.F.) relinquishes his temporary commission on vacating his appointment as Assistant Director of Medical Services.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel H. A. Haines is retained on the active list under the provisions of Articles 120 and 522, Royal Warrant for Pay and Promotion, 1914, and to be supernumerary.

Temporary Major F. M. Humphris, F.R.C.P.E. (Captain R.A.M.C.T.F.), relinquishes his temporary commission.

Majors to be temporary Lieutenant-Colonels whilst in command of field ambulances: W. F. H. Vaughan, A. E. S. Irvine, D.S.O., vice Major (temporary Lieutenant-Colonel) E. M. Pennerather, who relinquishes the rank of temporary Lieutenant-Colonel on reposting, H. H. J. Fawcett.

The following is substituted for the notifications in the London Gazette of April 5th and 11th, 1916, respectively: To be Lieutenant-Colonels whilst commanding casualty clearing stations: Major D. L. Harding, D.S.O., F.R.C.S.I., Major R. F. Ellery.

Major R. B. Hole, M.B., to be temporary Lieutenant-Colonel whilst commanding a casualty clearing station.

Majors to be temporary Lieutenant-Colonels whilst commanding R.A.M.C. training centres: A. H. Safford, B. A. Craig, C. R. Sylvester-Bradley, T. H. Gibbon, M.D.

Granted temporary and honorary rank whilst serving with the British Red Cross Hospital, Netley: As Major: Temporary honorary Captain H. L. T. J. M.D. As Lieutenants: H. J. Wallace, R. S. Totham, M.B., L. W. Sharp.

To be temporary Majors: W. J. Prendergast, M.B., whilst employed at the 1st Birmingham War Hospital, H. French, M.D., F.R.C.P., and

W. C. G. Ashdowne, F.R.C.S., whilst employed at the 1st County of Middlesex War Hospital.

Captains to be temporary Majors whilst in command of field ambulances: C. H. Denyer, V. T. Carruthers, G. H. Dive, vice Major (temporary Lieutenant-Colonel) H. E. J. A. Howley, who relinquishes the rank of temporary Lieutenant-Colonel on reposting.

C. T. Parsons, M.B., to be temporary Major, whilst serving with the Fulham War Hospital (substituted for notifications published in the *London Gazette* of May 15th and July 10th, 1915).

The name of Captain (temporary Major) Thomas T. H. Robinson, M.B., is as now described, and not as in the *London Gazette* of April 18th.

Temporary Captain G. Taylor, M.B., F.R.C.S., to be temporary Major.

H. Dearden to be temporary honorary Captain whilst employed with No. 3 British Red Cross Hospital.

Temporary Lieutenants to be temporary Captains: N. L. Pritchard, M.B., G. Norman, M.B., R. McL. Muir, M.B., R. H. Rollinson-Whitaker, F.R.C.S., J. Dunbar, M.B., J. H. Johnston, E. Weatherhead, M.B., M. Bridgman, M.D., B. T. Saunders, M.B., R. Williams, C. J. Gibson, M.D., W. B. Lawrence, G. A. Renwick, M.D., J. B. MacCulloch, M.B., C. G. Adams, M.B., C. R. R. Huxtable, M.B., J. Connell, M.B., W. J. Hill, M.B., M. H. E. Montesole, M.B., J. W. Heekes, W. F. Abbott, F. A. Hort, M.D., I. Campbell, J. Brown, M.D., C. A. Farrell, E. C. Wallace, R. M. Clarke, M.B., H. H. Clarke, M.D., H. M. Meyrick-Jones, M.D., C. J. Butler, B. Sweeten, M.B., C. H. T. Iott, M.B., R. C. Fuller, G. F. Holt, R. N. Salaman, M.D., J. T. McConkey, C. A. W. Pope, M.B., W. T. Hedley, M.B., T. Strain, M.D., A. G. R. Ritchie, M.B., G. A. Simpson, D. Cowin, M.B., W. S. Langworthy, M. T. MacMahon, C. F. White, M.B., R. Richards, W. C. Gavin, M.B., J. M. Pooley, E. W. Lynch, W. Salisbury, M.B., H. J. Hickin, M.B., V. H. Mason, M.B., H. E. O'Brien, N. Campbell, M.B., P. H. Delamere, A. H. Priestley, M.B., J. R. Robertson, J. H. Moir, M.D., A. M. Cowie, M.B., L. W. Batten, A. D. Bigland, M.D., H. R. Dew, M.B., R. K. Birnie, M.B., J. Morlet, M.B., A. Weigall, M.B., G. C. Scantlebury, M.B., J. G. Sleeman, M.B., W. A. L. H. Henderson, M.B., A. W. Bretherton, M.B., T. E. George, M.B., W. A. Boorman, M.B., W. A. H. Birrell, M.B., W. Rogerson, M.B., W. S. Newton, M.B., G. C. Bury, M.B., G. B. Courtney, M.D., R. McC. Service, M.D., J. Porter, M.B., J. F. Pierce, R. J. Merson, M.B., F. W. S. Stone, L. G. Davies, M.B., T. S. McIntosh, M.D., J. C. Sale, T. D. Kennedy, M.B., K. Simpson, M.B., J. Scott, M.B., H. M. Spoor, M.B., H. F. Nolan, H. H. Moffatt, G. H. Darlington, M.B., F. G. Wrigley, M.D., J. H. Marshall, M.B., A. L. Weakley, M.B., F.R.C.S.E., V. J. Bateson, G. S. Goodwin, M.D., J. Rowat, M.D., J. J. Robb, M.D., A. M. Warwick, M.B., B. E. Wright, M.B., C. S. Crichton, M.D., W. G. Hopkins, G. S. Applegate, R. M. Walker, A. H. Butcher, A. E. Druiett, R. Kenefick, M.B., G. R. Lipp, M.B., T. Stansfield, M.B., W. J. J. Arnold, M.B., W. Carnes, G. W. Stone, R. Stephens, M.B., J. C. Waithman, M.D., W. R. Etches, M.D., F. H. Looney, M.B., R. W. Hogg, M.B., J. Hughston, M.B., W. A. Shann, M.B., N. Grellier, D. Johnston, J. W. Turner, M.B., T. Warner, M.D., F.R.C.S., W. C. Blackham, M.B., A. Gray, M.D.

Temporary honorary Lieutenants to be temporary honorary Captains: E. H. Hicks whilst serving with the British Red Cross Society in France; F. W. Hamilton, M.B., whilst serving with No. 2 British Red Cross Hospital.

Vacancies and Appointments.

VACANCIES.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

BRISTOL ROYAL INFIRMARY.—(1) House-Physicians; (2) House-Surgeons. Salary, £100 per annum in each case.

BURNLEY: VICTORIA HOSPITAL.—Lady House-Surgeon. Salary, £150 per annum.

BURY INFIRMARY.—(1) Lady Senior House-Surgeon; (2) Lady Junior House-Surgeon. Salary, £250 and £150 per annum respectively.

CANNING TOWN WOMEN'S SETTLEMENT HOSPITAL, Plaistow.—Female Resident Medical Officer. Salary, £150 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—Fourth-year Student Dresser. Salary, 52 guineas per annum.

GENERAL COUNCIL

MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1916.

Tuesday, May 23rd, 1916.

Sir DONALD MACALISTER, K.C.B., President,
in the Chair.

THE one hundred and third Session of the General Medical Council began at the offices of the Council, 44, Hallam Street, W., on Tuesday, May 23rd, at 2 p.m.

The following new members took their seats: Professor Harvey Littlejohn, University of Edinburgh; Dr. Johnson Symington, Queen's University, Belfast; Professor A. F. Dixon, University of Dublin.

PRESIDENT'S ADDRESS.

THE HEAD OFFICES.

Gentlemen,—The Council meets to-day in its new chamber, and enters into complete occupation of the building erected for its accommodation under the supervision of the Site Committee. To that body, to the architect Mr. Frere, to the builders Messrs. Chinchin and their craftsmen, to the office staff, and to all who have helped forward the work of construction, equipment, and arrangement under conditions of exceptional difficulty, I would, in the Council's name, express our grateful acknowledgements. Members and the public will find, I hope, that the new offices enable us to transact business in circumstances of greater quiet and comfort than were possible in Oxford Street. Considerations of economy have made us postpone for the present some desirable improvements in matters of furnishing and the like. The essentials have been provided, however, and the rest can be added as times improve. Meanwhile, it is satisfactory to know that the expenditure on the building and its contents has been met from the proceeds of the sale of the Oxford Street premises and from surplus funds in the hands of the Council and its Branches. The building will thus be free from debt, and at the same time the income hitherto derived from the Council's property, on the old site, will be unimpaired. The new offices will, I am persuaded, prove in the end to be thriftier, as well as handier, than the old.

THE LATE SIR WILLIAM TURNER.

Our late president, Sir William Turner, who took a warm interest in the transfer, has not lived to see it completed. His death in February last deprived us of a wise and experienced counsellor and his university of a great

administrator, honoured alike for his scientific eminence and for his sterling character. In remembrance of his long association with the Council I have ventured to place his bust in this chamber. It is the original model for the marble bequeathed to the Anatomical Museum at Edinburgh. Through the courtesy of the sculptor, Mr. Herbert Hampton, I have been enabled to acquire it, and I now offer it for your acceptance as a memorial of my distinguished predecessor.

THE LATE SIR CHARLES BALL.

We have also to lament the loss of our friend and colleague, Sir Charles Bent Ball, who died in the midst of his many activities two months ago. His strong good sense, his professional knowledge and skill, and his genial warmth of manner gained for him an influential position here as elsewhere. We shall miss him greatly, both in the Council and in the committees, whose work he guided with real devotion.

NEW MEMBERS.

Sir William Whitla retires on the completion of his term of office as the representative of the Queen's University of Belfast. His great erudition and practical knowledge in the department of pharmacology and therapeutics were freely placed at the service of the Pharmacopoeia Committee. His colleagues and the editors were constantly indebted to him for willing and able help in the preparation of the new *Pharmacopoeia*.

In his place the Queen's University has appointed Professor Symington. As successor to Sir Charles Ball, the University of Dublin sends us Professor Dixon. The addition of these distinguished anatomists to those who are already valued members of the Council, will ensure that the importance of anatomy as a branch of medical education will not be overlooked. Dr. Harvey Littlejohn, whose appointment in place of Sir Thomas Fraser I intimated in November, takes his seat now. To him, and to the other new members, I desire to offer not only an official but a personal welcome. I am privileged to call them friends as well as colleagues.

THE COUNCIL'S STAFF.

At the end of last year our General Registrar, who is still on military service, was promoted to the rank of Lieutenant-Colonel. He is now in command of a battalion preparing for service at the front. To his great regret his military duties will prevent his attendance here this session. He was especially desirous to be in his place at this inaugural meeting in the new chamber. As you are aware, he ably assisted in the work of the Site Committee, until the inexorable demands of the war absorbed his whole time and strength. Mr. Cockington, as acting registrar, has filled his place most capably. Though the staff has

been depleted, and the extra labour of removal and rearrangement has been heavy, all concerned have worked so zealously that no dislocation of the public service has occurred. It is but right that our officials should know that their efforts, in a difficult situation, are appreciated by the Council. I am assured that they have materially assisted the medical departments of the services.

CENTRAL AND LOCAL MEDICAL WAR COMMITTEES.

The necessary demands of these services for qualified medical officers continue to put a severe strain on the resources of the profession. The Central and Local Committees, which have now been established in the three kingdoms, and recognized for recruiting purposes by the military authorities, are actively engaged in endeavouring to meet these demands, and at the same time to leave a fair provision for the medical needs of the civil population. The task is not easy. It calls for much careful consideration of individual persons, places, and circumstances. This could hardly be given under any general scheme of conscription, or by any but professional committees in touch with practitioners throughout the country. The value of the work already done by these committees is acknowledged by the War Office and the Admiralty. The greater the support and confidence extended to them by the profession the better they will be able to carry through their important operations for the good of all.

REGISTRATION IN 1915.

It had been expected that in 1915, the first complete year since the war began, the number of practitioners added to the *Register*, and available for military or civil work, would show a perceptible decrease. The expectation would probably have been realized but for the decision to recall from the combatant ranks medical students of the senior years, and but for the establishment of reciprocity with the Dominions and with Belgium. In the result it came out that the number of registrations in 1915 was 1,526, or 354 in excess of the average (1,172) for the preceding five years. Of the whole number, 181 appear in the Colonial List and 88 in the Foreign List.

MEDICAL STUDENTS.

The question of maintaining, in this and in future years, a supply of newly-qualified practitioners sufficient for the needs of the country continues to engage the attention of the military authorities and of the Council. The calling up of junior medical students, under the successive systems of recruiting, has undoubtedly given rise to some anxiety. Inquiries were accordingly made, at the instance of Lord Derby, as Director-General of Recruiting, in order to ascertain the facts of the situation. From returns obtained by the Council last January, it appeared that the number of students who during 1915 began medical study in the various professional schools and teaching institutions was 1,935. The number of first-year women students was 456. The number of second-year students was 1,020. The average annual entry of first-year students registered during the preceding five years was 1,441. In 1915 there were thus nearly 500 first-year medical students in excess of the average annual number registered in the preceding five years.

At the beginning of the present year the number of first-year students in actual attendance on instruction at medical schools (apart from teaching institutions) was ascertained to be 1,626.

The expected depletion of students, as compared with normal years, had thus been more than compensated by new entries, and if things remained as they were the position four years hence would not be unsatisfactory. It was thought advisable, however, to recommend that exemption from military service, already conceded to fourth-year and fifth-year students, should be extended to third-year students, who showed their proficiency in the earlier subjects of the curriculum by passing a third-year professional examination in March or April, at the end of the winter session. An Order to this effect was accordingly issued from the War Office. Lord Derby then asked the Executive Committee to appoint a small committee, including two representatives nominated respectively by the President of the Board of Education and the Secretary for Scotland, for the purpose of watching the general situation as regards Great Britain, and reporting upon it to him as Director-General of Recruiting. In view of the fact that

under the attestation and the compulsory systems, many of the medical students of 1915 would by April have been called from their studies, Lord Derby further requested that returns should be obtained of the numbers, belonging to each of the five years, who were in actual attendance on professional courses of instruction at the beginning of the present summer session. The replies to my inquiries on this head, for which I have to thank the authorities of the schools of medicine and teaching institutions, were returnable on May 18th. They are not yet complete, and they have not been fully analysed. But the Council will be interested to learn that so far as they go they give the following results:

Students still pursuing their Professional Studies in May, 1916.

First year	...	1,800
Second year	...	950
Third year and
Fourth-year	...	1,750
Final year	...	950

The expected depletion is most marked in the third-year and fourth-year group. Owing to the Order I have mentioned, many third-year students are reckoned with fourth-year students for recruiting purposes, and the group cannot readily be divided. Your Committee propose to call Lord Derby's attention to this group, as its present depleted condition indicates that a shortage of newly-qualified practitioners may be expected by the end of the year 1918.

MIDWIVES (SCOTLAND) ACT.

The representations made to the Government on your behalf, respecting the Scottish Midwives Bill, were effective. The bill, which was properly regarded as an emergency measure, became law on December 23rd, 1915. The Scottish Board has since been duly constituted, and the first set of rules for the enrolment of midwives has, after submission to the Executive Committee, been approved by His Majesty in Council.

Revised rules, framed by the Central Midwives Board under the English Act with a view to the better training and supervision of certified midwives, will be submitted to the English Branch Council during the present session. They indicate that the policy of the Central Board is progressive, and that its aim is to increase the efficiency of midwives. In the present emergency the responsibilities of these women must necessarily become greater, and it is the more imperative that the State and the profession should take steps to ensure their entire fitness. That some practitioners have not yet realized their duty with respect to the operations of women, who are not certified as fit to attend mothers in childbirth, is strongly suggested by cases brought before you at the last and at the present session. The Council will doubtless be prepared to consider whether the time has not come to issue a special warning notice on this subject.

ASSUMPTION OF MEDICAL TITLES.

In Scotland an important legal precedent has been established by a decision, on appeal, of the Court of Session. A limited company carries on in Edinburgh an objectionable form of unqualified practice under the style of the "Dr. Temple Company." The Royal College of Physicians, with Dr. Norman Walker, its treasurer, has succeeded in obtaining a perpetual interdict against the company, restraining it from using the word "Dr.," and so pretending to the public that it possessed some medical title to practise. The Royal College has thus vindicated its claim to intervene for the protection of the people of Edinburgh against a gross form of imposition. Company law and administration in England have hitherto failed to check similar abuses. The civic spirit of the Royal College merits our cordial recognition, and its success may well encourage other corporations to re-examine their powers in respect of the medical interests of the public.

In another Scottish court a pretender to medical qualification, who attempted to obtain money by falsely assuming a medical title, has been sentenced to three months' imprisonment, apparently without the option of the fine for mere false assumption provided in Section 40 of the Medical Act, 1858. This also may prove to be a useful precedent, in extension of the meagre safeguards of the statute.

DISCIPLINARY CASES.

Several of the penal cases you will have to consider this week relate to practitioners who have been tried and

convicted elsewhere. It is for the Council to decide whether these practitioners should be allowed to remain on the *Medical Register*.

RECIPROCITY WITH CANADA.

The exigencies of the war have induced certain of the Canadian provinces to reconsider their position with regard to imperial reciprocity. In November I reported that Ontario and Saskatchewan had ranged themselves with the Eastern Provinces. Now I report that legislation for the establishment of reciprocal relations has been effected in Manitoba, and is proceeding in British Columbia. The Province of Alberta alone remains outside the movement. It has expressed a desire for reciprocity, but, so far, we have not learnt that it has taken the necessary action; when it does the Dominion of Canada will, province by province, have fulfilled the conditions laid down in the Medical Act, 1886. There will then be no obstacle to the application of that Act by His Majesty to Canada as a whole, and to our recognition, for purposes of registration here, of the diploma in medicine, surgery, and midwifery granted after examination by the Canada Medical Council. The whole problem of Canadian qualifications would thus at once receive a satisfactory simplification.

Japan.

The empire of Japan, whose university degrees in medicine have long been registrable, has now decreed that in October, 1916, the new law on medical practice, intimated to the Council ten years ago, will come into effective operation. The Japanese authorities will then be able to guarantee that the degree of Bachelor of Medicine, granted by specified medical colleges under Government direction or supervision, will represent a qualification not inferior to the corresponding university degree. The Executive Committee will consider the question of adding this college degree, granted under the new conditions, to the list of qualifications registrable in the Foreign List.

Reports of Committees.

Reports may be expected from the respective committees on the teaching of medical ethics, the revision of the dental curriculum, and other topics of interest.

A reference to the minutes of the Executive Committee will show how numerous and important are the matters with which it has had to deal since last session. Medical and dental legislation throughout the empire has given rise to questions of policy and practice on which the advice of the Committee has been sought by the Privy Council, the Foreign Office, the India Office, and the Colonial Office. In pursuance of the powers delegated to the Committee, such advice has been given and gratefully accepted by the Departments of the State.

ELECTION OF COMMITTEES.

The following Committees were elected:

Business Committee: Dr. Norman Moore (Chairman), the President, Sir Henry Morris, Dr. Norman Walker, Dr. Little.

Executive Committee: The President (*ex officio*), Dr. Norman Moore, Sir Henry Morris, Mr. Tomes, Dr. Langley Browne, Mr. Hodsdon, Dr. Norman Walker, Sir John Moore, Sir Arthur Chance.

Legal Cases Committee: Dr. Saundby, Mr. Tomes, Dr. Norman Walker, and Dr. Little.

Pharmacopœia Committee: The President (Chairman), Dr. Norman Moore, Sir George Philipson, Dr. Caton, Dr. Barrs, Dr. Cash, Sir John Moore, Dr. Norman Walker, and Dr. Little.

Finance Committee: Mr. Tomes (Chairman), the President, Sir Henry Morris, Mr. Hodsdon, Dr. Little.

Dental Committee: The President (Chairman), Sir Henry Morris, Mr. Hodsdon, Mr. Tomes, and Sir Arthur Chance.

Dental Education and Examination Committee: Mr. Tomes (Chairman), the President, Sir Henry Morris, Mr. Hodsdon, Dr. Knox, Sir Arthur Chance, and Dr. Symington.

Students' Registration Committee: Dr. Norman Moore (Chairman), the President, Dr. Langley Browne, Dr. Mackay, Dr. Norman Walker, Sir Bertram Windle, and Dr. Kidd.

RECIPROCITY WITH CANADA.

The PRESIDENT reported that information had been received that a course of professional study extending over five years had been instituted in the province of Saskatchewan of the Dominion of Canada, to which Part II of the Medical Act, 1886, had been applied by an Order in Council dated June 10th, 1915. Consequently, in virtue of the powers conferred upon him, he had instructed the Acting Registrar on April 15th, 1916, to

register any person who produced the Licence of the College of Physicians and Surgeons of Saskatchewan, and who satisfied the prescribed conditions.

APOTHECARIES' HALL EXAMINATIONS.

The PRESIDENT stated, in reply to Dr. MAGENNIS, that the Council exercised its powers under Sections 13 and 18 of the Medical Act, 1858, to pay the deputy appointed to attend and be present on behalf of the General Medical Council at the professional examinations held by the Apothecaries' Hall for the purpose set forth in Section 18 of the Medical Act, 1858, and to report to the Council the general character of such examinations.

(The Council then went into camera and adjourned.)

British Medical Association.

CURRENT NOTES.

INSURANCE.

List of Stock Mixtures.

The list of mixtures capable of being stocked in bulk without deterioration, which has for a considerable time been under discussion by the British Medical Association and the Pharmaceutical Society of Great Britain, has been finally passed by the Commissioners, who have informed the Association that it will be circulated to Insurance Committees, Panel Committees, and Pharmaceutical Committees within the next few days. The list contains twenty-eight mixtures, and Panel Committees desiring to do so will be entitled to select not more than ten of them, which will then be dispensed at a reduced dispensing fee. The Panel Committee must give one calendar month's notice of its selection to the Insurance Committee, which will thereupon give notice to the individual chemists.

Complaints against Panel Practitioners by Persons who are not authorized by the Patient.

The Insurance Acts Committee has been consulted by a Panel Committee in reference to a series of complaints made to an Insurance Committee against panel practitioners by a person acting on behalf of an approved society. In several of these cases it appeared that the insured person concerned had not authorized any complaint to be made. The Committee is taking the opinion of the Solicitor of the Association on the question.

MEDICO-POLITICAL.

Proposed Abolition of Reports on Accidents by Certifying Factory Surgeons.

A letter has been sent to a large number of members of Parliament directing their attention to the proposal of the Government to drop the reports on accidents at present made by certifying factory surgeons, and asking for their help in resisting the proposal. The Association is acting in this matter in co-operation with the Association of Certifying Factory Surgeons.

INSURANCE.

LETTER TO LOCAL MEDICAL AND PANEL COMMITTEES.

Medical Department,
429, Strand, London, W.C.,
May 22nd, 1916.

DEAR SIR,

Proposed Emergency Settlement of Panel Practitioners' Accounts for 1915.

1. The Insurance Acts Committee was received by the Commissioners on April 18th to discuss the question of the settlement of doctors' accounts for the year 1915, and informed the Commissioners that the profession was anxious that some way should be found of settling the accounts for 1915 much more quickly than those for 1914. A long discussion then ensued, in the course of which the Commissioners gave an outline of a possible scheme which the Insurance Acts Committee promised to place before the Panel Committees.

2. Before describing the scheme it is desirable to explain the procedure, laid down by the Regulations, which was used for the settlement for 1914 and resulted in the Insurance Committees not being able to make the final

settlement before April, 1916. Under the Regulations the debit against the approved societies is made on membership statistics derived from the returns of contribution cards and other membership particulars relative to the first half of the year. Therefore if the settlement for 1915 were made according to Regulations it would be necessary to wait for these particulars, and experience has shown that *under war conditions* and allowing sufficient time to ensure that all returns are exhaustive it would be necessary to allow societies until May 31st, 1916, to prepare the necessary returns.

3. The work at the Commissioners' offices would, *under war conditions*, and judging by the experience of 1914, take another eight months, for this work must be done *pari passu* with the similar work that has to be done each half year in connexion with the National Health Insurance Fund. So that if normal procedure were followed under the present abnormal conditions, the settlement for 1915 could not be expected at earliest before the end of 1916.

4. The plan outlined by the Commissioners is as follows:

(a) Take the ascertained number of insured persons entitled to medical benefit in 1914.

(b) Adjust for enlistments. The Commissioners have information to enable them to determine the necessary adjustments.

(c) Adjust for new entrants into medical benefit. This would be estimated from information at the disposal of the Commissioners based on sales of insurance stamps.

The Commissioners are of opinion that these estimates would be so close to the real figures which would emerge from the more lengthy process of the Regulations that it would be impossible for any one to guess in advance whether the result would be just under or just over the real figures. The Insurance Acts Committee satisfied itself by inquiries that a very close estimate could be made by the means suggested.

(d) The Central Medical Benefit Fund having been constituted as above, the rest of the procedure would be precisely as laid down in the Regulations.

5. Any amount by which the total sum distributed under this emergency settlement is greater or less than the sum that would be available under the normal procedure would increase or reduce the liability of the special Exchequer grant, the scheme for the distribution of the grant being modified to effect this. It was suggested to the Commissioners that any payments so made should be on account, any excess or deficit being adjusted later when the actual figures were ascertained. The Commissioners explained that this would not be possible, because some doctors now on the panel might not be on when the balance was paid to, or was required to be returned by, the individual doctor, and besides the new arrangements with the chemists would make such a course one of considerable difficulty. The proposed settlement would, therefore, if accepted, be final and binding as regards individual areas and individual doctors. But the extent of any deficiency or excess in the aggregate payment under the emergency settlement would be ascertained in due course, and it is suggested that such deficiency or excess should be taken into account in constituting the medical pool for a subsequent year so as to leave both the Treasury and the profession as a body virtually unaffected.

6. The Insurance Acts Committee has given this subject very close attention, and is satisfied that it is a fair attempt to deal with the demand of panel practitioners for an earlier settlement, and in fact the only means of securing an earlier settlement, pending the revision of the whole arrangements which is promised after the war. The Insurance Acts Committee has therefore no hesitation in advising committees to accept the proposal. The Commissioners believe that in about six weeks on the average, after they are informed that the Panel Committees agree, the Insurance Committees could be put in a position to effect a settlement with individual doctors.

7. The plan suggested can, however, only be adopted if substantial agreement is arrived at among the Panel Committees as a whole. The alternatives are:

(1) To accept the scheme with the risk that the payment made may be either slightly over or slightly

under the amount that might be proved to be owing if the same elaborate and lengthy calculations were made as was the case for the 1914 accounts. The settlement would be final so far as the individual doctor and individual area are concerned. Any later adjustment would only affect the total sum made available for medical benefit in a subsequent year; or

(2) To await the usual calculations and receive final payment possibly in January, 1917, but not before.

8. You are requested therefore to ascertain, with as little delay as possible, the opinion of your Panel Committee, if necessary calling a special meeting. Your answer must be in my hands not later than June 12th, 1916.

Removal of Names from Panel Lists before Acceptance by another Doctor.

9. Complaints have been received from several Panel Committees of the removal of names from panel lists by Insurance Committees merely on the receipt of notification of change of address, instead of waiting for a notification that the person concerned has been accepted by another practitioner. We shall be glad to know whether your committee has any complaint to make on this score, and, if so, to have specific instances which can be placed before the Commissioners.

Sickness Benefit and Diseases due to "Own Misconduct."

10. The conference of Local Medical and Panel Committees in June, 1915, requested the Insurance Acts Committee to consider the advisability of taking action to secure that patients incapacitated for work by venereal diseases should not for that reason be refused sickness benefit. The Committee has, after mature consideration, arrived at the following conclusion—namely, that when an insured person is suffering from any disease which would cause him to be refused sickness benefit under the Insurance Acts because the disease was due to his own misconduct, he should not be debarred from sickness benefit if, in the opinion of his medical attendant, he cannot be efficiently treated without enforced rest.

The traditions of many of the approved societies are against such a change, and most of them are yet unconvinced that from the financial point of view they would in the long run gain if every case of venereal disease that needs rest were encouraged to take it. The Royal Commission on Venereal Diseases was in favour of the line suggested by this Committee, and it is now hoped that Panel Committees and representatives of the profession on Insurance Committees will do what they can to persuade the representatives of approved societies that their true interests and those of the community lie in curing venereal diseases as quickly as possible, and that the deprivation of sickness benefit compels many sufferers to keep at work when they should be in bed.

Representatives of the Local Medical and Panel Committees on the Insurance Acts Committee.

There are on the Insurance Acts Committee six representatives, elected on a territorial basis, of the Local Medical and Panel Committees of the country. Last year they were elected at the Conference of Local Medical and Panel Committees, and afterwards co-opted to the Committee. If there had been a conference this year the same course would have been taken. But as the opinion of the committees of the country was strongly against holding a conference just now, the meeting has been postponed, and may be held later in the year, or perhaps not until next year. The Committee desires to suggest that the present representatives be re-elected to serve for the session 1916-17, the election for the following session being carried out at the next conference. The present representatives are:

Dr. P. V. Fry, West Riding, Yorks.
Dr. T. Campbell, Lancashire.
Dr. T. Ridley Bailey, Staffordshire.
Mr. H. B. Brackenbury, Middlesex.
Mr. P. Napier Jones, Berkshire.
Dr. J. R. Drever, Glasgow.

I shall be glad to have the opinion of your committee on this suggestion.

Visits of Members of Insurance Acts Committees to Local Medical and Panel Committees.

The Committee is anxious to keep in as close touch as possible with the Local Medical and Panel Committees,

and, especially as there is to be no conference this spring, would suggest the desirability of visits of members of the Committee to meetings of Local Medical and Panel Committees, or preferably to general meetings of panel practitioners. It is very desirable that Panel Committees and their constituents should understand the extent and importance of the work that is done for them by this Committee, and also have some idea of the gravity of the problems that await us in the near future and of the means which are proposed by this Committee for dealing with them. If such local meetings could be arranged this Committee would be glad to send some one to address it—preferably the representative on the Committee of the area in which the meeting is held. If your Committee is prepared to arrange for such a meeting, either alone or in co-operation with some neighbouring Panel Committee, the Insurance Acts Committee will be glad on hearing from you to make the necessary arrangements for a speaker, and, if possible, for the attendance of any speaker for whom a preference is expressed.

This circular will be printed in the *BRITISH MEDICAL JOURNAL SUPPLEMENT* of May 27th. Any Panel Committee which holds its meeting before then can be supplied, on request, with a sufficient number of this circular for each of the members of the committee. But secretaries are urgently requested whenever possible to refer their members to the *SUPPLEMENT*.

I am, yours faithfully,

ALFRED COX,

To Chairmen and Secretaries
of Local Medical and Panel
Committees and Secretaries
of Divisions and Branches B.M.A.

Medical Secretary,
British Medical Association.

QUESTIONS FOR ANSWER.

1. Does your Committee agree to the proposed Emergency Settlement?
2. Does your Committee agree that the present representatives of Local Medical and Panel Committees who have been co-opted to the Insurance Acts Committee should retain office for 1916-17?

NOTE.—The answers to the above questions must be returned at latest by June 12th, 1916.

PROCEDURE IN INQUIRIES BY INSURANCE COMMITTEES.

THE English Commissioners have issued, under date May, 1916, an important memorandum to Insurance Committees on procedure in cases considered by them in a judicial or semi-judicial capacity (Memo. 215/I.C.) It deals with three different varieties of questions that may arise for consideration by Insurance Committees, Panel or Local Medical Committees, or the Medical Service Subcommittee.

Complaints by Insured Persons.

First come questions which may arise, under Article 45 of the Regulations, between insured persons and their panel doctors in respect of the treatment rendered by the doctor, including the granting of certificates, or the conduct of insured persons. All such questions, the Commissioners point out, stand automatically referred to the Medical Service Subcommittee and need no formal reference thereto by the Insurance Committee, which can only take action on the report of the subcommittee. The Regulations, while forbidding the appearance of counsel or solicitors at the hearing, do not forbid either practitioners or insured persons acting by means of agents, whether acting professionally or as friends, but committees are advised that it will always be better to require a written statement of that fact signed by the party. In addition to the questions thus automatically referred, the Insurance Committee may refer to the Medical Service Subcommittee any other question as to the administration of medical benefit. For example, general reports as to the conduct of a panel practitioner or insured person should first be considered by the subcommittee rather than by the Insurance Committee in order to avoid premature publication of allegations which on inquiry might prove to be without foundation. Such cases probably reach the Medical Benefit Subcommittee first, but its duty at this stage will simply be to decide whether there is sufficient *prima facie* evidence to warrant a full inquiry by the Medical Service Subcommittee. It is pointed out that the constitution of the Medical Service Subcommittee

does not suit it to conduct a roving inquiry; the Insurance Committee or some subcommittee ought first to focus and define the issues and charges involved before referring them for judicial inquiry by the Medical Service Subcommittee.

Stress is laid on the necessity before the hearing of a case of forwarding to the parties concerned as precise and explicit a statement of the charges as possible, as the respondent, in the absence of details and particulars, might be placed at a serious disadvantage, and it might be necessary to adjourn the hearing to allow him to meet allegations which had not been sufficiently explicit. For example, vague charges of neglect would be quite unfair to the respondent, and the chairman of the subcommittee and the clerk are advised that they ought, before the hearing, to reduce the charges to definite issues, so that the respondent may be able to prepare his defence. The subcommittee is not precluded from listening to fresh charges made only at the hearing, but in that case it may be necessary to allow an adjournment to give the respondent an opportunity of dealing with them. The duty of the subcommittee is (a) to sift the evidence and embody in their report the facts found; (b) to take up any technical medical points, and, in the light of the expert knowledge of the medical members of the subcommittee, to express an opinion on them; (c) to submit the general inferences and conclusions of the subcommittee; and (d) to submit recommendations as to the action which the Insurance Committee should take.

The Insurance Committee, while bound to accept any facts established to the satisfaction of the subcommittee, is not bound to follow any recommendations, and the Commissioners insist that what are in reality inferences ought not to be put forward as findings of fact. For example, the subcommittee might find as a fact that a doctor after being called to a case failed to attend on certain days. Such a fact the Insurance Committee would be bound to accept as established, but to state that the doctor was therefore guilty of neglect would only be an inference, which the Insurance Committee might refuse to accept.

Emphasis is laid on the advisability of not divulging the names of the parties concerned to the Insurance Committee until the case has been finally settled and the Commissioners have given their decision. Further, it is pointed out that though the Medical Service Subcommittee has a qualified privilege, so that an action for libel could not be successfully founded on any statements contained in its report unless the publication were proved to be malicious, at the same time such immunity would not apply to a member of the subcommittee who discussed with outside persons what had passed at a meeting of the subcommittee.

In speaking of the penalties which may be inflicted on practitioners under Regulation 45, committees are reminded of the conditions on which the Exchequer grant of 2s. 6d. is given for medical benefit, and where the offences might call for a reduction of this grant committees are directed to communicate with the Commissioners before promulgating their decisions. The danger is pointed out of using in a loose sense such words as "negligence," "neglect," and similar terms, and it is to be regarded as of the greatest importance that committees should carefully distinguish between mistaken actions on the part of a doctor and distinct breaches of professional duty.

Allegations of Excessive Prescribing.

The memorandum next deals with the question of deductions on the ground of excessive prescribing. It is carefully pointed out that though prescribing in excess of the average of the area may offer a *prima facie* ground for inquiry, it does not in itself justify the inference of extravagant prescribing. Under the Regulations of 1916 (as well as under the old Regulation 40) practitioners whose prescribing is under question have a right to be heard by a properly summoned meeting of the whole Panel Committee, and this duty cannot be deputed to any subcommittee, though there is no objection to a preliminary investigation of the prescriptions and the facts of the case by a subcommittee. The report of the Panel Committee must be of such a character that the Insurance Committee, which consists mainly of laymen, shall, with the assistance of the technical knowledge placed at its disposal be able to arrive at a reasoned decision. A report that simply states that a practitioner had ordered a particular

drug or preparation, and ought to be surcharged, would be clearly inadequate, and the Insurance Committee might reasonably refer it back for further information. The Insurance Committee has a right to demand not only the facts and conclusions at which the Panel Committee has arrived, but also the reasons which have led to such conclusions, and while the Insurance Committee would properly give full weight to the opinions of medical practitioners on technical matters, it would not be discharging its duties by merely accepting without consideration the recommendations made to it. Panel Committees are distinctly told that though they may suggest the amount of surcharge which they consider meets the case, Insurance Committees may use their own discretion and deduct "such sum as they think fit," and though the extent of the extravagance, so far as it is measurable, is a relevant circumstance, and the deduction should normally bear some relation to it, the primary object is to give the doctor a forcible reminder, and to act as deterrent against extravagance in the future, as it is not the intention of the Regulations that any very precise calculation should be attempted. Under the Regulations of 1916 the Pharmaceutical Committee has no longer any function in this connexion in the proceedings of the Panel Committee, and the latter committee will now be free to deal with questions of extravagance in prescribing without attempting to cover the whole ground, as the chemists are no longer affected by its decisions. It is also observed that the new Regulations require that the report of the Panel Committee shall state fully the facts of the case and the grounds on which its opinion is based, and that it should contain a recommendation as to the amount, if any, which might properly be recovered from the practitioner.

Range of Medical Treatment.

The third question dealt with is as to the range of medical treatment which can properly be required from panel practitioners, and two points are here emphasized: (1) That Article 50 of the Regulations which deals with this only refers to specific questions in particular cases and is not applicable to general or hypothetical cases, and (2) the precise issue on which the Local Medical Committee and the Insurance Committee have to form an opinion is whether in the circumstances of the particular case a specified service was of a kind which could, consistently with the best interests of the patient, properly be performed by a general practitioner of ordinary professional competence and skill. No question, therefore, other than that of "competence and skill" can be considered under this regulation. The question may arise in one of two ways: (1) A practitioner may have declined to perform a service; or declined to do it without a fee, and the insured person may claim it as part of his medical benefit; or (2) a practitioner may have performed the service and claim a fee for it on the ground that it was not a service covered by his agreement. Practitioners are required under their agreement to advise a patient as to the steps that should be taken in order to get any necessary treatment beyond the competence of ordinary practitioners, and if this advice has not been given, the Commissioners consider the practitioner would not be justified in invoking the machinery of Regulation 50. If the question arises in the form of a complaint by an insured person, it stands referred to the Medical Service Subcommittee, and even when no formal complaint is made, it is suggested that this subcommittee might well be used to establish the relevant facts, and the facts as thus established would then constitute the case on which the Insurance Committee and the Local Medical Committee are required to give their opinion.

A definite statement of the facts is of such importance that the Commissioners issue a revised Form 122/I.C., which indicates some of the particulars which should be included in the statement of the case, in addition to a full description of the medical details of the case. Care is to be taken to avoid considering under this article questions other than that of "competence and skill"; the question whether a particular service, in regard to which no question of competence or skill arises, is within the scope of the doctor's duties, cannot be considered under Regulation 50, and must be dealt with by the Insurance Committee as a question of the interpretation of the doctor's agreement, subject to the right of the doctor to appeal to the Commissioners.

Association Notices.

NOMINATIONS FOR COUNCIL, 1916-17.

ENGLAND AND WALES.

North of England, North Lancashire, and South, Westmorland Branches:

*Bolam, Lieut.-Col. R. A., M.D., Newcastle-on-Tyne.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH.—Dr. William H. Wynn, Honorary Secretary, gives notice that the annual meeting of the Birmingham Branch will be held on Thursday, June 22nd, at 3.30 p.m. Business: Annual reports; election of officers. The President for the ensuing session, Dr. W. R. Jordan, will deliver his inaugural address.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.—Mr. H. L. Evans (101, Prince's Avenue, Hull) gives notice that the annual meeting of the Division will be held in the Board Room of the Hull Royal Infirmary, at 8.15 p.m., on Friday, June 9th. Business: To receive the annual report and financial statement. To elect officers.

KENT BRANCH.—Dr. E. A. Starling, Honorary Secretary (Chillingworth House, Tunbridge Wells), gives notice that the third annual meeting of the Kent Branch (which this year will be only for the transaction of necessary business) will be held on Wednesday, June 7th, at 3.30 p.m., at the Royal Star Hotel, Maidstone. The Council recommends that there should be no change in the officers of the Branch, and also the holding of the annual meeting in Chatham on the usual lines when the country has returned to a more normal condition after the war.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: FURNESS DIVISION.—Drs. George Alexander and A. E. Thompson, Honorary Secretaries, give notice that the annual meeting of the Furness Division will be held in the Masonic Hall, Barrow, on Friday, June 9th, at 3.15 p.m. Agenda: Annual report; election of officers; adoption of new ethical rules; discussion on the reduction of notification fees; any other business.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—Drs. W. J. Greer and L. Freeman Marks, Honorary Secretaries, give notice that the annual meeting of the Branch will take place in Cardiff on June 8th for the election of officers and other business.

Meetings of Branches and Divisions.

EDINBURGH BRANCH:

EDINBURGH AND LEITH DIVISION.

The annual meeting of the Division was held on May 18th, when Dr. W. STEWART, Chairman of the Division, presided. Non-members in the district had been invited to attend the meeting by advertisement in the *Scotsman*.

Reduction of Notification Fees.—The proposal of the Retrenchment Committee, since enacted by Parliament, to reduce the fee for notification of infectious diseases from 2s. 6d. to 1s., was considered. The Senior Secretary (Dr. KEPPIE PATERSON) read a letter he had previously sent to the six local members of Parliament on this subject (SUPPLEMENT, April 29th, p. 75), and also read letters received from the Medical Secretary. Drs. MCCREADIE, STEWART, STEVENS, JOHN McLAREN, R. ROBERTSON, ARMOUR, JAMES RITCHIE, BORROWMAN, and M. DEWAR discussed the subject. On the motion of Dr. STEVENS, seconded by Dr. BORROWMAN, it was resolved:

That this meeting, representative of the whole medical profession in Edinburgh and Leith, approves of Dr. Keppie Paterson's prompt action in addressing the local members of Parliament in opposition to the proposed reduction of the fees for notification of infectious diseases from 2s. 6d. to 1s.; that in the opinion of this meeting this proposal, which has now received parliamentary sanction, viewed especially in connexion with the services being rendered to the country during the war by the medical profession, of whom a large proportion are on active service in the R.A.M.C., must be regarded as derogatory and shabby to the profession, besides being fraught with ulterior effects injurious to the public; that this meeting therefore requests that the subject continue to receive the consideration of the associations representing the profession in order to determine what steps can be taken both by them and by the individual members of the profession to stop the reduction of fees complained of and to secure the fair and honourable treatment which we claim the profession deserves.

Dr. JAMES RITCHIE moved, and Mr. MCCREADIE seconded, the following motion, which was passed unanimously:

The Edinburgh and Leith Division express great dissatisfaction with the inefficient action of the Executive authorities of the Association in relation to the proposal (when it was before Parliament) to reduce the fee for notification of infectious diseases. They further request the Association to bring up the matter at the approaching Representative Meeting with the view of united action being taken to have the fee restored to the former very moderate sum.

Dr. F. PORTER moved, and Dr. GIUSEPPI seconded, the following motion:

That the members of the medical profession in Edinburgh and Leith strongly disapprove of the action of the Government in reducing the fee for the notification of infectious diseases without being referred to the profession for consideration, and they will refuse to notify such cases at the reduced rate.

After discussion, this motion was lost.

War Matters.—War medical matters were reported on by Dr. STEVENS, secretary of the local Medical War Committee, and he was cordially thanked for his statement and for his work for the profession.

Maternity Service and Child Welfare.—The Memorandum of the Local Government Board on this scheme had been sent to each member with the billet for the meeting. The SENIOR SECRETARY explained some matters connected with the subject, and gave an account of his interviews with Dr. Leslie Mackenzie, Local Government Board, and Dr. Williamson, M.O.H. for the city of Edinburgh. Dr. W. STEWART gave an account on the action of the Leith practitioners in relation to the scheme and the result of their conference with the committee of the Leith Town Council. The whole subject was remitted to the Executive for their watchfulness and consideration.

Annual Report.—The annual report of the Division was presented by the SENIOR SECRETARY.

Election of Officers.—As all the members were eligible for re-election, it was agreed unanimously to continue them in office:

Chairman: Dr. W. Stewart.

Vice-Chairmen: Dr. R. A. Lundie and Dr. R. McKenzie Johnston.

Senior Secretary and Treasurer: Dr. G. Keppie Paterson.

Junior Secretary: Dr. J. D. Comrie.

Representatives to Representative Meeting: Dr. J. Stevens and Dr. R. A. Lundie.

Representatives to the Branch Council: Drs. E. F. Armour, J. D. Comrie, J. Lamond Lackie, J. Playfair, and R. Thin.

Executive Committee: Mr. L. Beesly, Drs. L. F. Bianchi, R. H. Blaikie, J. M. Bowie, G. S. Carmichael, A. Goodall, A. Morrison McIntosh, J. McLaren, C. M. Pearson, James Ritchie, I. Venters, and A. Murray Wood.

Annual Representative Meeting.—The annual report of the Council and the Provisional agenda of the Annual Representative Meeting were brought before the meeting by the SENIOR SECRETARY. A proposal regarding the need for provision and for determining the attitude and policy of the profession concerning medico-political affairs was referred to the Executive to be dealt with. The appointment of possible Deputy Representatives was remitted to the Chairman and Senior Secretary with powers.

REDUCTION OF NOTIFICATION FEES.

At a meeting of the medical men of Gorton, Manchester, the proposal by the Local Government Board to reduce the fee for the notification of infectious diseases was discussed, and the opinion strongly expressed that such parsimonious action was dishonourable and ungrateful, particularly at the present time, when extra and heavy calls have been made upon the medical profession for voluntary and charitable work, such as attending the wives and children of soldiers and sailors, signing many thousand certificates a week for those unable to attend at the post office to draw their weekly pay, and attending to the private and panel patients of those doctors who are serving in the forces. In addition was to be reckoned the increase in the price of drugs and chemicals from 50 to 1,000 per cent., and the cost of professional living greatly increased.

M.O.H. writes: In the SUPPLEMENT of May 13th, p. 111, "A Country Doctor" writes concerning the notification of a panel patient with diphtheria. Surely it is the duty of the medical officer of health to procure the swab for a bacteriological examination.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE Admiralty announce the following appointments: Fleet Surgeons H. Spicer, M.B., to the *Vind*; H. L. Morris to the *Indefatigable*, vice Spicer; R. H. Mornement to the *Pembroke*; S. S. H. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

ANNUAL REPRESENTATIVE MEETING AT LONDON,

JULY 28th AND FOLLOWING DAY(S).

NOTICES OF MOTION.

No Notices of Motion for the Annual Representative Meeting, 1916, having been received by the date (May 20th) specified in the SUPPLEMENT of May 6th, no notices were published in the SUPPLEMENT of May 27th.

The following Notices, since received, will be included in the Agenda of the Meeting as amendments or riders to the recommendations or paragraphs of the Annual Report of Council to which they respectively relate:

A. IN CONNEXION WITH WAR EMERGENCY.

Composition of Central Medical War Committee, 1916-17.

1. *Amendment* by North Staffordshire to Motion contained in Item 6 of Provisional Agenda (SUPPLEMENT, May 6th, p. 77):

That the Central Medical War Committee be increased by the addition of 4 representatives of general practitioners from provincial industrial areas, 2 of whom should preferably be of military age.

B. AFFECTING ADMINISTRATION OF ASSOCIATION.

Supplement.

2. *Amendment* by Reigate to Motion contained in Item 11 of Provisional Agenda (SUPPLEMENT, May 6th, p. 78):

That the Council be instructed to consider the advisability of issuing the SUPPLEMENT to the JOURNAL to members of the Association only.

C. AFFECTING POLICY OF ASSOCIATION.

Membership of Association.

3. *Amendment* by North-East Essex to Motion contained in Item 10 of Provisional Agenda (SUPPLEMENT, May 6th, p. 78):

That in view of the fact that the financial position of medical practitioners is being seriously affected by the rise in the cost of living, and is likely to be further affected in the future by this and by economies of public departments, it is urgent that the membership

of the British Medical Association, which is the only body that voices the opinion of the profession and carries weight with the Government and with the public, be greatly increased.

Reduction of Fees for Notification of Infectious Diseases.

4. *Amendment* by Edinburgh and Leith to Motion contained in Item 19 of Provisional Agenda (SUPPLEMENT, May 6th, p. 78):

That this Meeting expresses great dissatisfaction with the inefficient action of the Executive Authorities of the Association in relation to the proposal (when it was before Parliament) to reduce the fee for notification of infectious diseases. That this Meeting resolves to take united action to have the fee restored to the former very moderate sum.

Patent Medicines.

5. *Rider* by Reigate to Motion contained in Item 19 of Provisional Agenda (SUPPLEMENT, May 6th, p. 78):

That it be an instruction to the Council to keep before the profession and the public the report of the Select Committee on Patent Medicines, so that when the opportunity occurs full use may be made of the report of that Committee for the furtherance of legislation as recommended in the report.

By order,

ALFRED COX,
Medical Secretary.

May 31st, 1916.

British Medical Association.

CURRENT NOTES.

SUPPLY OF PETROL.

MANY letters continue to be received complaining of the difficulty which practitioners in some areas experience in securing a continuous supply of petrol. These complaints are at once transmitted to the Secretary of the Departmental Committee on Petrol Supplies. In some cases where the difficulty has been very great and sufficient particulars have been given—as, for example, the name of the usual supplier and the brand of petrol generally used—it has been possible to get temporary relief, but, so far as can be ascertained, there is no likelihood of any permanent relief until the report of the Departmental Committee has been presented. The right of the medical profession to exceptional treatment is, however, fully recognized by the

authorities. It may be suggested to Panel Committees in areas where the difficulties of getting a supply of petrol are acute that they should make urgent and direct representations to the Commissioners, asking them to bring pressure to bear on the authorities to relieve the difficulty pending more permanent arrangements.

Meetings of Branches and Divisions.

LANCASHIRE AND CHESHIRE BRANCH:

SOUTHPORT DIVISION.

The annual meeting of the Southport Division was held at the Medical Library, Lord Street, Southport, when Dr. CORKHILL was in the chair.

Annual Report and Financial Statement.—The annual report of the Executive Committee and statement of accounts were read and accepted.

Election of Officers.—The following officers were elected for 1916-17, no change being made in the chairmanship and vice-chairmanship so as to coincide with the Medical Society, whose officership has been unchanged this year in consequence of its operations being in abeyance due to the war:

Chairman: Dr. Corkhill.

Vice-Chairman: Dr. Penrose.

Secretary and Treasurer: Dr. Harris.

Representative at Representative Meetings: Dr. Baildon.

Deputy: Dr. Schofield.

Representatives on Branch Council: Dr. Baildon (*ex officio*), Dr. Harris.

Members of Executive Committee: Drs. Schofield, Pridie, Limont and Lewis.

A discussion took place as to the desirability of service on the Committee of Drs. Limont and Lewis, they being eligible for military service, and the Executive Committee as such having been constituted the Local Medical War Committee with power to adjudicate on the claims for exemption of enrolled men. Eventually, on the motion of Dr. CAIRNS, seconded by Dr. HORN, it was resolved unanimously:

That Drs. Schofield, Pridie, Limont, and Lewis be elected members of the Executive Committee on the understanding that Drs. Limont and Lewis would withdraw from its deliberations when the Committee had to execute judicial functions.

Annual Representative Meeting.—Matters referred to Divisions and the Annual Report of the Council of the Association (SUPPLEMENTS, April 29th and May 6th) were then considered. The CHAIRMAN referred to several points deserving the special consideration of members, and the Division expressed its appreciation of the work of the Council of the Association as set forth in the annual report, and requested its representative at the Representative Meeting to use his own judgement in accordance with what he knew to be the feeling of the Division with regard to the details of the numerous recommendations concerning which he has received no definite instructions.

Election of Direct Representatives and to the Central Council.—Attention was drawn to the desirability of supporting the candidature of Drs. Langley Browne, H. A. Latimer, J. A. Macdonald, and T. Jenner Verrall at the election of Direct Representatives on the General Medical Council; also to Mr. Garstang's candidature for the Council of the Association.

Presidency of the Branch.—Dr. BAILDON explained the further postponement, in consequence of the war, of the meeting of the Branch arranged to be held in Southport, and the meeting confirmed its former recommendation that Dr. Baildon accept the presidency of the Branch Council.

METROPOLITAN COUNTIES BRANCH:

MARYLEBONE DIVISION.

The annual meeting of the Division was held on May 25th, when Mr. BISHOP HARMAN, Chairman of the Division, presided. It was agreed that no meetings should be held during the coming year, except in case of emergency.

Election of Officers.—The officers for the preceding year were re-elected, with Miss May Thorne to take the place of Lady Barrett, and Mr. Edward Wallis to be Honorary Secretary.

Annual Report.—The annual report of the Division was agreed to.

Ethical Rules.—The adoption of the revised rules of procedure in ethical cases was adopted after some discussion and explanation by Dr. NEAL as to their method of working.

ST. PANCRAS AND ISLINGTON DIVISION.

The annual meeting of the St. Pancras and Islington Division was held at the Midland Grand Hotel on May 19th, when Dr. ALEXANDER BROWN, Chairman, presided. There were present only six members who were not members of the Executive Committee. The HONORARY SECRETARY read his annual report.

Election of Officers.—The Executive Committee in the notice convening the meeting announced that they made "no nominations" for officers for the ensuing year, and on those offices being submitted in succession to the meeting from the chair no names whatever were proposed.

Association Notices.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, June 28th, in the Council Room, 429, Strand, London, W.C.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

June 1st, 1916.

CHANGES OF BOUNDARIES.

AMALGAMATION OF CARLOW AND KILKENNY DIVISIONS.

The following change has been made in accordance with the Articles and By-laws, and takes effect as from the date of publication of this notice:

That the Carlow and Kilkenny Divisions of the South-Eastern of Ireland Branch be amalgamated to form one Division of that Branch, to be known as the Carlow and Kilkenny Division.

Representation in Representative Body.—Unaffected.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH.—Dr. William H. Wynn, Honorary Secretary, gives notice that the annual meeting of the Birmingham Branch will be held on Thursday, June 22nd, at 3.30 p.m. Business: Annual reports; election of officers. The President for the ensuing session, Dr. W. R. Jordan, will deliver his inaugural address.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.—Mr. H. L. Evans (101, Prince's Avenue, Hull) gives notice that the annual meeting of the Division will be held in the Board Room of the Hull Royal Infirmary, at 8.15 p.m., on Friday, June 9th. Business: To receive the annual report and financial statement. To elect officers.

FIFE BRANCH.—Dr. G. C. Anderson, Honorary Secretary (Denbeath House, near Methil, Fife), gives notice that the annual meeting of the Branch will be held in the Station Hotel, Kirkcaldy, on Friday, June 9th, at 3.15 p.m., when it is proposed to adopt the ethical rules approved by the Annual Representative Meeting, 1915.

KENT BRANCH.—Dr. E. A. Starling, Honorary Secretary (Chillingworth House, Tunbridge Wells), gives notice that the third annual meeting of the Kent Branch (which this year will be only for the transaction of necessary business) will be held on Wednesday, June 7th, at 3.30 p.m., at the Royal Star Hotel, Maidstone. The Council recommends that there should be no change in the officers of the Branch, and also the holding of the annual meeting in Chatham on the usual lines when the country has returned to a more normal condition after the war.

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman (Honorary Secretaries) give notice that the annual general meeting of the Branch will be held at 429, Strand, W.C., on Tuesday, June 27th, at 4 p.m. The business will be: (1) Report of scrutineers as to the election of new officers. (2) The annual reports of council and of representatives of the Branch on the Central Council. (3) Alteration of Rule 7 b. (4) The adoption of the Revised Ethical Rules as approved by the Annual Representative Meeting, 1915. (5) President's address: Medical Administration of Modern Armies.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: FURNESS DIVISION.—Drs. George Alexander and A. E. Thompson, Honorary Secretaries, give notice that the annual meeting of the Furness Division will be held in the Masonic Hall, Barrow, on Friday, June 9th, at 3.15 p.m. Agenda: Annual report; election of officers; adoption of new ethical rules; discussion on the reduction of notification fees; any other business.

GENERAL COUNCIL OF MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1916.

Wednesday, May 24th, 1916.

Sir DONALD MACALISTER, K.C.B., President,
in the Chair.

ALLEGED COVERING OF UNCERTIFIED MIDWIVES.

The Council proceeded to the consideration of penal cases. Mr. Bodkin attended as Legal Assessor. Mr. Harper appeared as Solicitor to the Council.

DISCIPLINARY CASES.

During the hearing of these cases Sir Francis Champneys, President of the Central Midwives Board, withdrew, and the PRESIDENT announced that he would take no part in the proceedings.

The Council proceeded to the consideration of the case adjourned from November 4th, 1915, against Herbert Midgley Reeve, registered as of Bournemouth Park Road, Southend-on-Sea, M.R.C.S.Eng. 1899, L.R.C.P.Lond. 1899, M.B.U.Lond., 1899 (see SUPPLEMENT, November 27th, 1915, p. 198). Testimonials as to Dr. Reeve's professional conduct during the past six months were submitted from Dr. Maxwell of Southend, Dr. John Walker who was Chairman of the South Essex Division of the British Medical Association, Dr. Pugh, M.O.H. Southend, and from Councillor Cooper, Chairman of the Borough Insurance Committee.

Mr. BERTRAM, on behalf of the Central Midwives Board, said it had heard with much gratification the nature of the evidence tendered on behalf of Dr. Reeve, and had nothing further to submit to the Council.

Dr. REEVE, in reply to the PRESIDENT, expressed his regret for what had occurred, and assured the Council it should not occur again.

Strangers and the parties were directed to withdraw. On readmission, the PRESIDENT announced the judgement of the Council as follows:

Mr. Reeve, I have already informed you on behalf of the Council of the grave view it takes of the nature of the offence specified in the charge which had been proved against you, but having regard to your assurances as to your conduct in the future the Council has not seen fit to direct the Registrar to erase your name from the *Medical Register*.

The Council then proceeded to the consideration of the case of Frederick Robinson, registered as of 96, Clough Road, Masbro, Rotherham, L.R.C.P.Edin. 1880, who had been summoned to appear before the Council on the following charge:

That being a registered medical practitioner you by your assistance knowingly enabled a Mrs. Fisher, a woman not certified under the Midwives Act, 1902, to attend women in childbirth under cover or pretence that such women were attended or to be attended by you or by her under your direction, thereby enabling the said Mrs. Fisher in contravention of the said Act to practise as if she were certified thereunder. And that in relation thereto you have been guilty of infamous conduct in a professional respect.

The complainants were the Central Midwives Board.

Mr. BERTRAM, solicitor, supported the charge.

Mr. HARPER, Solicitor to the Council, stated that a telegram had been received from Dr. Robinson saying that he declined to attend and answer the charge. He had sent in two or three letters by way of defence, so that there was no doubt he had received the notice of inquiry.

Mr. BERTRAM contended that the evidence he would adduce, if unanswered, would prove a direct contravention of the Council's warning notice with regard to covering. He respectfully suggested that in ascertaining the motives which operated on the parties regard should be had to the facts and the conduct of the parties before proceedings were taken, and that the Council should depend less upon what was said in explanation subsequently. He put in the record of the records for acting as an unqualified midwife of Mrs. Fisher, and also the record of her acquittal in respect of charges in which Dr. Robinson was involved.

Mr. G. W. DUNCAN, Secretary to the Central Midwives Board, having produced certain documents in connexion with the case.

Mr. CHARLES LEE DES FORGES, Town Clerk of Rotherham, stated that his Council had found the Midwives Act beneficial in so far as it secured competent attendance on the poorest class of women in childbirth. In the past his Council had had difficulty with Mrs. Fisher, as was shown by the list of her convictions. She was an undesirable person to attend a maternity case under any circumstances.

Mr. BERTRAM then called a number of female witnesses who proved that Mrs. Fisher attended them in their confinement and she invariably, either on being asked to do so or without, sent for Dr. Robinson to attend them; one witness further deposed to the fact that Mrs. Fisher told her that "Dr. Robinson always followed her."

Mr. BODKIN then read two letters received from Dr. Robinson in which he denied the accusations brought against him, and also the telegram saying he declined to attend.

Strangers and the parties were then directed to withdraw. On readmission, the PRESIDENT announced the judgement of the Council as follows:

I have to announce that the Council have judged Frederick Robinson to have been guilty of infamous conduct in a professional respect and have directed the Acting Registrar to erase from the *Medical Register* the name of Frederick Robinson.

The Council began on May 24th the consideration of the case of Daniel Evans Powell, registered as of 101, High Street, Tooting, S.W., M.B., C.M. 1894, U.Glasg., who had been summoned to appear before the Council on the following charge:

That being a registered medical practitioner you by your assistance knowingly enabled one Jenny Walter, a woman not certified under the Midwives Act, 1902, to attend women in childbirth under cover or pretence that such women were attended or to be attended by you or by her under your direction, thereby enabling the said Jenny Walter in contravention of the said Act to practise as if she were certified thereunder. And that in relation thereto you have been guilty of infamous conduct in a professional respect.

Mr. Bertram, solicitor, appeared on behalf of the complainants, the Central Midwives Board.

Dr. Powell attended in answer to his notice accompanied by Mr. J. A. C. Keeves, his counsel, instructed by Messrs. Webster, Butcher, and Sons, solicitors.

Mr. BERTRAM, before opening his case, sought leave to take the evidence of two witnesses whose attendance the next day it would be difficult to obtain. Mr. KEEVES did not object, and the witnesses were called accordingly, and at the conclusion of their examination the Council adjourned.

When the case was resumed on May 25th Dr. Powell again attended, accompanied by Mr. Philip Webster Butcher, of the firm of Messrs. Webster, Butcher, and Sons, solicitors.

Mr. BERTRAM informed the Council that as he had been unable to procure any shorthand report of the proceedings against Mrs. Jenny Walter at Bow Street, and had been refused access by the Public Health Committee of the Wandsworth Borough Council to the notifications of births, he had difficulty in tendering first-hand evidence, but proposed to put in evidence as to the proceedings in the form of the notes and oral testimony of the solicitor who conducted the prosecution. Mr. BUTCHER intimated that he took no exception to the proposal.

Mr. BERTRAM, in opening the case, said that a woman named Jenny Walter owned a maternity home at Tooting in which a large number of married and unmarried women went for the purposes of their confinement. Proceedings were instituted against her at the instance of the London County Council for contravention of certain sections of the Midwives Act. In these proceedings she alleged that she was acting in all the cases alleged against her under the directions of a qualified medical practitioner, and called Dr. Powell to support her contention, who gave evidence to that effect. The evidence then given disclosed the further fact, which Dr. Powell admitted, that there was a verbal working arrangement between Mrs. Walter and himself by which when women were confined in this home they received medical attention, or at any rate inspection, by him. It appeared from the evidence that at none of the cases referred to was Dr. Powell present at the actual delivery; and it was clear that there was no illness mentioned which specially necessitated the presence of a medical man. There was the further element of suspicion

that in all these cases the notification of birth to the local authority was given by Dr. Powell. He (Mr. Bertram) had applied for the actual notifications, but the Wandsworth Public Health Committee had passed a resolution that these were not to be produced except under a subpoena.

He then called a number of witnesses to support the statutory declarations which they had made who deposed to facts which he had laid before the Council in opening.

Dr. POWELL, examined by Mr. BUTCHER, said he first came in contact with Mrs. Walter through an emergency call, and in conversation she informed him she had had great difficulty in securing the attendance of a medical man, and he at once agreed to attend cases at a uniform charge of 10s. 6d. He accordingly attended cases at her house, including the cases deposed to in the present case. He frequently notified the birth to the medical officer of health in cases where he attended.

Cross-examined by Mr. BERTRAM: In Tooting it was impossible to get certified midwives to do the work, and unqualified practice by women was rife there before he took up work with Mrs. Walter, who, he believed, was a skilful nurse. He signed the notifications of birth at the request of Mrs. Walter. Under his arrangement with her he had to attend all cases there and medically supervise them.

By the LEGAL ASSESSOR: Why, if Mrs. Walter was such a skilful practitioner; was it because she was an unregistered woman?

The WITNESS: Yes; that was the reason.

By the PRESIDENT: He had attended every confinement in the home since he was first called in, except two cases, when he was away. Mr. Butcher was constrained to admit that the way this home had been conducted under the direction of Dr. Powell was not proper. Dr. Powell desired to express his sincere regret for what he had done, and would undertake never to be party to such a proceeding again. In conclusion, he could only urge that Dr. Powell had been indiscreet, but guilty never.

Mr. BERTRAM did not desire to add anything by way of reply.

Strangers and the parties were directed to withdraw. On readmission, the PRESIDENT announced the decision of the Council as follows:

Mr. Daniel Evans Powell, the Council has carefully considered the charge made against you, which, in effect, was that you had by your assistance knowingly enabled a woman not certified under the Midwives Act, 1902, to attend women in childbirth under cover or pretence that such women were attended or to be attended by you, or by her under your direction, thereby enabling her to practise as if she were certified.

The facts alleged against you in the charge the Council has found to be proved.

The Council takes a very grave view, in the public interest, of the danger which arises from medical practitioners lending their names for such a purpose and "covering" the practice of unqualified or uncertified women, under whatever pretext they practise midwifery or otherwise attend and treat women in labour. But in order to give you an opportunity of reconsidering your position in relation to this matter, the Council has postponed judgement in your case till the next session, in November, of which you will receive due notice. You will then be required to attend, and to produce testimony from your professional brethren as to your character and conduct in the interval.

PROPOSED WARNING NOTICE.

Sir FRANCIS CHAMPNEYS on May 27th moved:

That it be remitted to the President, in consultation with the legal advisers of the Council, to draw up, for submission to the Council, a warning notice with regard to the "covering" by practitioners of midwifery practice carried on by women other than certified midwives.

The question of covering uncertified women by medical men had caused considerable trouble to the Central Midwives Board, as it was really an attempt to evade the provisions of the Midwives Act. That Act had reduced puerperal mortality in a very marked degree. Until the last few years statistics with regard to mortality from puerperal sepsis had shown very slight improvement. In 1902 the number of deaths from this cause per million females living was 118; in 1907 the rate had fallen to 81, and in 1911 to 72. Before 1902 the deaths from this cause per 1,000 births was never less than 4.41; in 1907 that had fallen to 3.83, and in 1911 to 3.67. In other words, the lives of 621 women were saved in 1907 which would have been lost in 1902. These figures showed that the passing of the Midwives Act was followed by a sudden

and considerable fall, and that there had since been gradual, although comparatively slight, improvement. He mentioned this to show the importance of getting the terms of the Act enforced. It was plain that the reduction in puerperal mortality coincided with the introduction of the Midwives Act. This had been attributed to the elimination of uncertified midwives, and it followed almost certainly that if the Act were suspended or not administered efficiently puerperal mortality would go up again. It was said that it was not desirable to be strict in enforcing observance of the Act during the war, but in his view the war made it all the more important that more lives than ever should be saved and that the Act should be administered efficiently. On the whole, there was no shortage of midwives. The total number of midwives on the roll was 37,231, and the total number of practising midwives was estimated at 14,223. There were plenty of midwives in some districts and a deficiency in others. It was a question of distribution and not of absolute numbers, and it did not follow that if the number of midwives were considerably increased that there would not be districts where there was not still a deficiency. What the Council had to do, therefore, was to see that the Act was efficiently administered and that the covering of uncertified midwives by medical men should cease. Various reasons were given in individual instances why the practitioner had covered the unqualified woman, but none of them would hold water. The General Medical Council had in a sense been entrusted with the health of the nation in so far as the standard of the medical profession was concerned, and it must take care that all safeguards were maintained. If the Council did not act in its administrative capacity it would run the risk of a return to the old days before the mortality for puerperal sepsis had been cut down.

Mr. PYE-SMITH, who seconded, said that members of the Council appreciated the danger, but what was wanted was that the whole profession should have a like appreciation of it. It was very evident from what the Council had heard during the session that some members of the profession did not appreciate the danger, and therefore it was most desirable that a warning notice should be issued.

Dr. MACDONALD thought a great deal of ignorance existed among general practitioners with regard to this matter, and that some such step as suggested in the motion was necessary. Many did not understand the risk they ran in working with uncertified women, and if the fact were carefully brought home to them a great deal of good would be done. It had been stated that there was no real scarcity of midwives, but those who lived in the country districts knew the contrary. This, to some extent, could be met by a proper distribution, which could not be carried out without some system of subsidy, as certified midwives would not stay in country districts where they could not earn a living wage.

Dr. NEWSHOLME said that the services of midwives in districts where they could not earn a proper wage were already being subsidized. The Government for the last two or three years had offered to pay to any council one half the total expenditure of placing midwives in remote country districts where otherwise they would not be able to earn a living wage, and in towns to pay half the fee, where the mother could not afford to pay the whole, if the Council would pay the other half; further, it had offered to pay half the doctor's fee in emergency cases, so that given the co-operation of the Government and county councils and borough councils there was no reason why this need should not be met at once. It was, therefore, desirable that the medical profession should know what was ready to be done, and that it was to its interests that the provisions of the Act should be strictly carried out.

Sir HENRY MORRIS asked whether steps had been taken to ensure enforcement of the provisions of the Act by local authorities so that duly certified midwives should receive protection from competition of unqualified persons which it afforded.

Dr. NORMAN MOORE endorsed the views expressed by Dr. Macdonald. He hoped that the warning notice would be so drafted as to present a sort of argument in order that the general practitioner might clearly understand the matter. No doubt there were many practitioners who did not know what the offence of covering uncertified persons involved.

Sir JOHN MOORE, in supporting the motion, took the opportunity to inform the Council that it was the unanimous wish of the profession in Ireland to have a Midwives Act applicable to that country.

Dr. LANGLEY BROWNE said that the expression in the Act to the effect that women who were not midwives must not undertake midwifery except under the supervision of a medical man should be clearly defined, as at present general practitioners did not appreciate its meaning.

Sir FRANCIS CHAMPNEYS, in reply, said he had seen a good many letters from certified midwives complaining bitterly of the want of protection in country districts from the competition of uncertified women; there was no doubt that local authorities in many places had been extremely slack in enforcing the provisions of the Act. It was very difficult to induce them to take action. Many of the difficulties were occasioned by the wording of the Act, which could only be got over by an amending Act. This he hoped would be passed in due time, and then the campaign against puerperal fever could be more successfully carried on than in the past.

The motion was carried unanimously.

(To be continued.)

NUMBER OF MEDICAL STUDENTS.

We are indebted to the President of the General Medical Council for a copy of the following return (dated May 30th, 1916) of medical students in actual attendance in May, 1916, on courses of professional instruction at medical schools and approved teaching institutions:

	Men.	Women.	Total.	Men under 18.	Men from Outside the United Kingdom.
First year ...	1422	636	2058	183	102
Second year ...	783	295	1078	21	129
{ Third year* ...	519	163	682	0	146
{ Fourth year* ...	1078	145	1223		
Final year ...	922	140	1062	0	115

* A number of third-year students who passed a professional examination at the end of the winter session have been transferred to the fourth year class by direction of the military authorities.

REDUCTION OF NOTIFICATION FEES.

SIR,—Regarding Mr. Bishop Harman's letter to Dr. Smith printed in the SUPPLEMENT of May 20th, 1916, I would like to point out that I think he is in error in there stating that "the fee for the notification of measles was already on a different basis to that of other notifiable diseases." There is no difference in the fee (see Statutory Rules and Orders, 1915, No. 1,155).

I desire also to enter my protest against what is implied in the phrase, "A reduction on taking a quantity." There is no such thing in medicine as taking patients in the mass. Each case must be considered individually.

I think the time has come for the Association to make an earnest endeavour to erase from the Statute Book the necessity of our notifying the authorities as to any case of infection. We should be compelled to notify such cases to the head of the family or household, and the onus should be on him to notify the M.O.H. Of course no fee would be payable to the attending doctor for carrying out this manifest duty.—I am, etc.,

Southampton, May 29th.

A. A. MACKIEITH.

We referred this letter to Mr. Bishop Harman, who writes as follows in reply:

SIR,—There are three novel points in the Order making measles compulsorily notifiable which, I think, justify my statement that the notification of this disease was on a different basis to that of other notifiable diseases.

1. The notification is not for each case, but for the first case in a household or institution, and the one notification covers all cases occurring on those premises for the two months succeeding.

2. On receipt of notification the medical officer of health is required, under the memorandum accompanying the Order, to "verify the nature of the case," so that it would appear that the ultimate responsibility for the correctness of the notification rests with the medical officer of health.

3. Medical assistance and nursing may be provided by the local authorities under the Order.—I am, etc.,

London, W., May 30th.

N. BISHOP HARMAN.

INSURANCE.

THE FINANCE OF APPROVED SOCIETIES.

INTERIM REPORT OF DEPARTMENTAL COMMITTEE.

THE Departmental Committee on Approved Society Finance and Administration has issued an interim report, dated May 11th, embodying the conclusions reached at that date. The Treasury Minute of January 27th appointing the Committee gave it as reference—

to consider and report upon any amendments in the financial scheme of the National Insurance Acts which experience of the administration of sickness, disablement, and maternity benefits may suggest as desirable, within the existing limits of contributions and benefits and, apart from further Exchequer grants before the completion of any valuations of approved societies, and further to consider how far the work of approved societies could be simplified and its cost reduced without detriment to the interests of insured persons by amendments of the Act and Regulations, and to make recommendations thereon.

It is thus seen that the working of medical and sanatorium benefits was not included in the Committee's reference. The greater part of the present report is concerned with the financial basis of the Acts, leaving a fuller consideration of the administration till later.

Women.

It is made perfectly clear in the report that the sickness-rate among women was greatly under-estimated when the Act was framed, owing to the want of reliable data, and the position as regards women is now so serious that radical modifications of the financial basis are absolutely necessary. This is only partly due to sickness arising from pregnancy. It is pointed out that the employment of married women tends to be intermittent and a large number of them are outworkers—that is to say, they are not employed at fixed times in factory or workshop, but work at home in their own time; this causes a peculiar difficulty in applying the statutory test of incapacity for work which constitutes the title to benefit. The Committee was precluded by its reference from showing the bearing of these facts on the position of the panel practitioner, but the profession may well keep in mind, when there is any reconsideration of the terms of medical remuneration, the fact now established that the amount of sickness, and consequently the medical treatment required by insured women, was greatly under-estimated when the present terms of remuneration were fixed.

Effect of the War on the Sickness-rate of Men.

It is of interest, too, to know what the Committee has to say as to the probable future effect of the war on the sickness-rate of insured men. Already a very considerable number of men have been discharged from the army permanently ruined in health, and constantly needing treatment from the panel doctors, though before the war they were among the best lives on the doctors' lists. The effect of this on the funds of societies has not been overlooked by the Committee, though it puts against this the possible improvement in health that other men may experience from a long course of outdoor physical training. Though the Committee does not think well to express any definite opinion as to the net effect which the war will have in the future on the sickness funds, it deems it necessary to recommend that a special reserve fund should be formed to meet any remote rise of the sickness curve of men in general as the effect of war conditions. At the same time it declines to be a party to any proposal which involved placing upon the funds of the National Insurance a burden which should properly be borne by the community at large. Here again the medical profession may well urge when the time comes that it would be equally unfair to place on the panel practitioners any burden the cost of which should properly be borne by the community at large.

The Committee's Recommendations.

It will be seen from the above that the Departmental Committee's present inquiries may ultimately have a direct bearing on the medical profession. Without entering into the details of the report, which most directly affects the finances of approved societies, it is sufficient here to summarize the recommendations. The Committee recommends:

That part of the contributions at present carried to the Sinking Fund for the redemption of reserve values should be released.

The moneys thus released to be applied:

- (a) To increase the income available for women's benefits.
- (b) To establish a fund, to be known as the "Women's Equalization Fund," with the aid of Exchequer grants, to support and equalize the special risks of married women.
- (c) To establish a Men's Special Reserve Fund to provide against the more remote effects of war service upon the health of insured men.
- (d) To establish a Valuation Reserve in each society, to be known as the "Contingencies Fund."
- (e) To establish a common protective fund, to be known as the "Special Risks Fund," to provide against special occupational or other risks affecting either men or women.

Suggestions for the management of these funds are given, and special recommendations of the greatest importance to approved societies are made as to the pooling provisions of the Act under which branches of societies, and in certain cases societies, are liable to have to contribute up to one-third of any available surplus which they may have towards the deficiencies of other branches or societies. It is recommended that the present provision of the Act referring to this should be repealed, and modified arrangements are suggested.

It is further recommended that the rate of interest assumed in the financial basis of the Act should be maintained at 3 per cent. and not raised to $3\frac{1}{4}$ per cent., as has been suggested in various quarters, in view of the present general rates of interest. The valuations of societies, it is suggested, should be at quinquennial instead of triennial intervals.

The foregoing recommendations are to run for a period of ten years, with the effect of extending the term of the Sinking Fund by about six years—that is, from 1932 to 1938.

Apparently it is not thought that it will be possible to estimate for some years to come what the future cost of disablement benefit will be or the ultimate effect that the present war conditions will have on the general sickness-rate of the insured population. In the meantime arrangements are to be made for obtaining full statistical data as to the experience of men and women respectively, and though compulsory separation of men's and women's funds is not recommended, it is recommended that facilities for their separation should be given when desired by any society.

The report is signed by all the members of the committee except Mr. P. Rockliff, who desired to give a special report explaining his own views as to the need of Exchequer grants for relieving valuation deficiencies of societies. The Treasury, however, ruled that the recommendations made in his memorandum were outside the terms of the Committee's reference, and so could not be printed with the report. The letter from the Treasury conveying this decision says with regard to such Exchequer grants, "The present financial position of the country necessarily precludes such a course, which, moreover, is, in the opinion of His Majesty's Treasury, not warranted either by the principles of the Acts or the necessities of the situation."

TRAVELLING EXPENSES OF PANEL COMMITTEES.

The following reply has been received from the National Health Insurance Joint Committee in answer to the letter from the British Medical Association, published in the SUPPLEMENT of May 20th, p. 115:

National Health Insurance Joint Committee,
Buckingham Gate, London, S.W.,
May 15th, 1916.

SIR,

With reference to your letter of the 8th instant, with regard to the question of the payment of travelling expenses of members of Panel Committees, I am directed by the National Health Insurance Joint Committee to state that, as your Council are doubtless aware, the proposal to defray such travelling expenses out of the statutory allotment made towards the expenses of Panel Committees from the Medical Benefit Fund is one which, as the Joint Committee are advised, would require legislation.

The proposal has been noted for consideration in connexion with any suitable occasion which may arise.

I am, Sir, your obedient servant,
(Signed) R. W. HARRIS.

The Medical Secretary,
British Medical Association,
429, Strand, W.C.

IRELAND.

PAYMENT OF MEDICAL CERTIFIERS.

SIR,—Permit me to inform those medical practitioners in Ireland who have signed agreements to act as medical certifiers for the purposes of the National Insurance Acts, and who have not received their quarterly pay due on March 31st last, that the delay in this respect is entirely due to the failure of almost half the medical certifiers to return to the National Health Commission, as requested by them in their circular letters of April 20th and May 16th, the blocks of the certificates issued and other particulars which are necessary for the distribution of the grant available for medical certification. Doctors who issued no certificates should furnish *nil* returns, and those doctors who have issued certificates should at once, where they have not already done so, send the blocks and other information to the Commissioners in the form requested by them.—I am, etc.,

T. HENNESSY,
Medical Secretary, Irish Medical
Committee.

Dublin, May 29th.

INSURANCE ACT IN PARLIAMENT.

ENLISTMENT OF MEMBERS OF APPROVED SOCIETIES.

In reply to a question by Mr. MacCallum Scott, on May 11th, as to the confusion which has arisen in approved societies through members failing to notify the society that they had been enlisted, Mr. C. Roberts said that arrangements had been made with the Army Council under which every insured person on being called to the colours was being given by the military authorities a printed postcard showing his regimental particulars and the date of the beginning of his service. The man was instructed to forward the postcard to his approved society or, if not a member of a society, to the Insurance Commissioners, and also to forward to his society any stamped contribution card in his possession at the time of being called up.

CORRESPONDENCE.

HOW IS THE INSURANCE SYSTEM WORKING?

DR. T. J. FLETCHER (Castle Donington) writes: As the National Insurance Act has been in force for more than three years now, I should like to state the impressions of a country panel practitioner of its working (1) as affecting the panel patient, (2) the patients outside the panel, and (3) the panel doctors themselves.

1. Most of those engaged in country practice will, I am sure, bear me out when I say that the effect is not good. The Insurance Commissioners exact a weekly toll from these poor people and offer them in exchange an avowedly restricted imperfect medical service, the medical man being warned against over-prescribing and the unfortunate patient solemnly admonished not to be taken ill in the night and not to expect more than the minimum of medical attendance. Now, Sir, most of us have been taught that the practitioner who does not give his patients of the best that is in him had better leave them alone. There is no room in our calling for the *diletante*. The moral effect, too, is not good. It makes the not very scrupulous man a lazy, deceitful malingerer, and as for the one of better moral fibre, he either does not take the advantage he has paid for, or, if he falls ill and has a long illness, he is subject to several petty annoyances—among them the not always agreeable visits from "insurance nurses and doctors" dispatched by the several insurance societies in their efforts to free themselves from liabilities that they had better not have incurred.

2. Owing to the diminished output from the medical schools and the serious strain on the profession at this unhappy time, it will soon become impossible for the panel doctor to give his private patient the attention that he desires or deserves, for, as the many insist upon overmuch medical aid, even if it be of a superficial nature, it follows that the few must go short at times.

3. To my mind the saddest part of the whole business is the bad effect that this benevolent co-operative stores, curative agency must have on the average member of our profession. Instead of a patient and not always unsuccessful attempt to arrive at the correct diagnosis and appropriate treatment of disease, there is now a distinct danger that his time will be frittered away in a hasty and superficial attendance on the chronic invalid and the malingerer, in the marking of cards, writing certificates,

doing clerical work for the clerks of the Committees, and "humping generally." All this soul-clogging, brain-destroying work is being done, as calculated from my last quarter's payment, for something between 4s. and 5s. a head per annum.

If the profession as a whole is willing to go on making bricks without straw, there is of course no more to be said, but now is the time for us to make a protest or else for ever hold our peace.

PAY UNDER THE INSURANCE ACT FOR YEAR 1914.

Dr. C. M. STEVENSON (Cambridge) writes: I have seen several letters lately in your correspondence column from panel doctors who complain that they have received for 1914 less than the amount that they expected from the numbers on their lists.

That this experience is not universal is shown by the figures for the practice in which I am a partner.

Number of patients on lists are 2,300; amount expected (including Tuberculosis and Drug Suspense Fund, which we receive in full in this area), 7s. 6d. per patient, £862 10s.; amount actually received, *circa* £950.

The excess, of course, is accounted for by the unallotted, but as they are estimated to be about 10 per cent., the amount received practically balances the amount expected.

I presume it largely depends on the efficiency in the office of the Clerk to the Insurance Committee.

Some clerks are careless, and allow their lists to become badly inflated; others do not.

Naval and Military Appointments.

ARMY MEDICAL SERVICE.

SURGEON-GENERAL SIR WILLIAM BARTIE, V.C., K.C.M.G., C.B., to be a Director of Medical Services at the War Office.

Colonel R. Kirkpatrick, C.M.G., M.D., on completion of four years' service in his rank, is retained on the active list under the provisions of Articles 120 and 522, Royal Warrant for Pay and Promotion, 1914, and to be supernumerary.

THE POSITION OF MEDICAL MEN UNDER THE MILITARY SERVICE ACT.

THE regulations made under Section 7 of the new Military Service Act, according to which claims for exemption made by medical practitioners on any ground other than that of conscientious objection must be referred by the tribunal to a professional committee, were promulgated by an Order in Council made on June 1st, 1916,* as follows:

ORDER IN COUNCIL.

Whereas by Section 7 of the Military Service Act, 1916 (Session 2), His Majesty may, by Order in Council, make regulations with respect to the establishment of Professional Committees to deal with claims for exemption made by duly qualified medical practitioners, and with respect to the reference to such Committees of applications by duly qualified medical practitioners for certificates of exemption:

Now, therefore, His Majesty is pleased, by and with the advice of His Privy Council, to make the Regulations in the Schedule annexed hereto:

This Order may be cited as the Military Service (Professional Committees Regulations) Order, 1916.

June 1st, 1916.

ALMERIC FITZROY.

SCHEDULE. REGULATIONS

For Professional Committees in respect of duly qualified Medical Practitioners under the Military Service Acts, 1916.

1.—(1) Subject as hereinafter provided, there shall be a Central Professional Committee for England and Wales, and a Central Professional Committee for Scotland, consisting in each case of not less than twelve nor more than twenty-five members, appointed by members of the medical profession in such manner as the Army Council may approve, and representative of the profession, to which all applications for certificates of exemption made to a tribunal in England or Wales or in Scotland as the case may be by or in respect of practitioners on any ground other than that of conscientious objection shall be referred by the tribunal to which such applications are made.

(2) If the Army Council are satisfied that any existing Professional Committee which has been recognized by them for the purpose of making arrangements for the selection of practitioners for service during the war in the Naval and Military Forces of the Crown has been appointed by members of the profession and is representative of the profession, they may, if they think fit, and subject to such conditions as they may impose,

approve such Committee for the purpose aforesaid, and in that case the Professional Committee so approved shall be the Central Professional Committee for the purposes of these Regulations.

(3) The Central Professional Committee may, with the approval of the Army Council, appoint or recognize such local professional committees as they may think necessary for the purposes hereinafter mentioned.

2.—Where an application for a certificate of exemption on any ground other than that of conscientious objection is made by or in respect of a practitioner to a Tribunal, the Tribunal shall forthwith notify the appropriate Central Professional Committee that the application has been made and shall send to that Committee the application together with any statement or particulars furnished to the Tribunal by or in respect of the practitioner.

3.—(1) The Central Professional Committee shall, subject as hereinafter provided, thereupon consider the matter, and, if they are satisfied on the facts before them that a certificate of exemption (whether absolute, conditional, or temporary) ought to be granted, they shall make a recommendation to the Tribunal accordingly.

(2) The Committee in any case in which they are of opinion that the application does not give the required or sufficient particulars, or does not disclose *prima facie* grounds for considering the application, may require further and better particulars or grounds, as the case may be, to be given; and if such further and better particulars or grounds are not delivered to the Committee within seven clear days after such notification has been sent, or within such extended time as may be allowed by the Committee, the Committee may make forthwith such recommendation as they think appropriate.

(3) For the purpose of ascertaining the facts relevant to the decision of an application, the Committee may, and if so required by the practitioner in respect of whom the application is made, shall, hear the practitioner and such witnesses as he may desire to call, and may take into consideration any written statements sent by or in respect of any practitioner.

(4) At least seven clear days before the hearing of an application the Committee shall send to the practitioner notice in writing of the time and place fixed for a hearing.

4.—(1) Subject as hereinbefore provided, the Central Professional Committee may, if they think fit, and before hearing the practitioner or coming to a decision upon the application, refer any application to the local professional committee of any area in which the practitioner resides or carries on medical practice, for consideration and report on all or any of the matters connected therewith, and may in that case forward to the local committee for the purpose any documents in their possession relating to the application.

(2) The local professional committee shall make such inquiries into the circumstances of the case as they think fit and may invite the practitioner to appear before them and to call such witnesses as he may desire, and shall as

* The Order is placed on sale, and can be obtained through any bookseller, price 1d.

soon as may be report any facts ascertained by them, and their opinion on the case, confidentially in writing to the Central Professional Committee.

5.—(1) In the case of an application for a certificate of exemption other than on the ground of conscientious objection which is made by or in respect of a practitioner who is a member of the staff (including the residential and teaching staff) of any hospital or medical school situated within the Administrative County of London, or by or in respect of any other practitioner in England or Wales where the Army Council or the Central Professional Committee deem it advisable, the Central Professional Committee shall forthwith refer the application for consideration to a Committee of Reference appointed by the Royal College of Physicians of London and the Royal College of Surgeons of England and approved for this purpose by the Army Council, and in such case the recommendation shall be made by the Committee of Reference and shall be transmitted by them to the Central Professional Committee and by that Committee to the Tribunal.

(2) The provisions of Article 3 (2) of these Regulations shall apply in the case of applications referred to the Committee of Reference, but, subject as aforesaid, the procedure of the Committee of Reference on the consideration of an application shall be such as the Committee of Reference may determine.

(3) The Army Council may, if they think fit, and subject to such conditions as they may impose, approve for the purposes aforesaid any existing Committee of Reference recognized by them which has undertaken similar duties in connexion with the selection of practitioners for service during the War in the Naval and Military Forces of the Crown.

6.—(1) The Central Professional Committee shall elect a chairman who shall preside at all meetings of the Committee held for the purpose of dealing with matters arising under these Regulations, and if the chairman is absent from any meeting the members present shall choose one of their own number to preside, and that member shall for the time being have all the powers of the chairman.

(2) The quorum of the Committee shall be such number of members, not being less than five, as the Committee may decide.

(3) Proceedings of any Committee under these Regulations shall not be open to the public.

7.—Questions before the Central Professional Committee shall be decided by a majority of the members present and voting, and, in the event of an equality of votes, the chairman shall have a second or casting vote.

8.—(1) A practitioner may appear at any hearing before the Central Professional Committee personally, or, in any case where the Committee so permit, by a representative.

(2) The Committee at any hearing may, if they think fit, hear witnesses other than the witnesses, if any, called by the practitioner, and the practitioner or his representative may put to such witnesses such questions as appear to the Committee to be relevant.

9.—Notices and applications required to be delivered to the Central Professional Committee shall be sent to the office of the Committee, and may be delivered at or sent by post to that office, and notices required to be sent to a practitioner in respect of whom an application for a certificate of exemption is made may be sent by post to or delivered at his usual place of residence.

10.—Subject as hereinbefore provided the Central Professional Committee shall, as soon as they have considered an application and come to a decision thereon, communicate their recommendation in writing to the Clerk of the Tribunal by which the application has been referred; and a register of all applications and of the decisions thereon shall be kept by the Central Professional Committee.

11.—The Military Service Regulations (Amendment) Order, 1916, shall not apply to an application by or in respect of a practitioner for a certificate of exemption where those Regulations are inconsistent with the provisions of these Regulations.

12.—In these Regulations "practitioner" means a duly qualified medical practitioner.

CIRCULAR TO TRIBUNALS BY THE LOCAL GOVERNMENT BOARD.

The Local Government Board has issued a circular letter to local tribunals and appeal tribunals transmitting this Order in Council, and also another Order made on the same day containing regulations dealing generally with all other persons to whom the Act applies. The circular

contains the following paragraph with reference to medical practitioners:

7. *Medical Practitioners.*—Medical practitioners who come within the operation of the Acts and wish to be exempted must, as hitherto, apply to the appropriate Local Tribunal.

But in view of the special position of the medical profession, their services being in great demand both by the Army and by the civil population, the Act makes provision for applications for exemption from medical practitioners being considered by professional committees which will be fully aware of the special arrangements which can be made in any case, and will be able to deal with each case from the point of view of the needs and resources of the country as a whole, not simply of those of a particular locality.

It has, therefore, been provided that each application for exemption by, or in respect of, a duly qualified medical practitioner, other than an application solely on conscientious grounds, shall be forthwith referred by the Local Tribunal to a central professional committee, and that the recommendation of this committee shall be binding on the Tribunal. If an application is made by a medical practitioner both on conscientious and on other grounds, it is to be referred forthwith to the professional committee for their recommendation on the other grounds. On receipt of the recommendation from the professional committee, the Tribunal will then, unless the recommendation is for absolute exemption, consider the application on conscientious grounds, after due notice, and will decide whether the certificate, if any, should be confined to the recommendation made by the professional committee in respect of the other grounds, or whether it should be modified in favour of the applicant in view of the conscientious objection. The Tribunal will not in any case be able to grant a certificate less favourable to the applicant than has been recommended by the professional committee.

A copy of the separate Regulations which have been issued in this matter is enclosed for the information of the Tribunal. It will be observed that power is given to the central professional committee to refer a case to a local professional committee for investigation if this is thought desirable.

Communications to the Central Professional Committee concerning cases in England and Wales should be addressed to the Secretary, Central Medical War Committee, 423, Strand, London, W.C.

[The address of the Scottish Medical Service Emergency Committee is the Royal College of Physicians, Edinburgh.]

POOR LAW OFFICERS IN NAVAL OR MILITARY SERVICE.

THE Local Government Board (England and Wales) has issued a circular,¹ dated May 26th, 1916, to boards of guardians and other Poor Law authorities, drawing attention to certain provisions of the Local Government (Emergency Provisions) Act, 1916.

Section 1 gives the guardians power to grant leave of absence to any officer or servant for as long a period as may be necessary to enable him to serve in or with His Majesty's Forces, and, while he is serving, to pay him or his wife or other dependants nominated by him an allowance which shall not, without the sanction of the Local Government Board, exceed his civil remuneration (including emoluments) after deducting therefrom his naval or military pay. Any resolution, promise, sanction, or permission passed or given by the guardians to any officer or servant before the passing of the Act, with a view to his serving in or with His Majesty's Forces, is declared to be binding on the guardians. The memorandum points out that the Act also enables the guardians to pay allowances exceeding those indicated above in cases that may arise in future, provided the sanction of the Local Government Board be obtained. The memorandum continues as follows:

This power is only intended to be used in exceptional cases, and applications for sanction will only be entertained in cases of that nature. An allowance which brings the total income up to an amount exceeding civil pay could not usually be justified, but an allowance slightly exceeding that generally legalized by the Act might not be unreasonable in some cases of married men holding commissions as officers.

There are also cases such as those in which an arrangement has been made by the guardians with a medical officer, so that while serving in or with His Majesty's Forces he continues to draw his full civil salary, but provides at his own cost a deputy,

¹ The circular will, it is stated, shortly be placed for sale, and may be ordered through any bookseller.

approved by the guardians, to perform his duties. The Board do not think that the arrangements made in such a case need ordinarily be referred to them for their approval, and they hereby sanction generally the continuance of those arrangements. They reserve, however, to themselves the power of intervening to review the arrangements in any individual case if circumstances should render it desirable to do so.

A question has been raised as to the application of this section in the case of a temporary employee of a local authority, and particularly in that of a person who has been engaged to take temporarily the place of an officer or servant who has been given leave of absence with a view to his serving in or with His Majesty's Forces. Mr. Long is advised that, if such an employee is engaged for a fixed period of time he cannot be given leave of absence, or an allowance under the section for a period extending beyond the expiration of his period of engagement, and that, if such an employee is expressly engaged as a substitute for some officer or servant, he is probably not within the section.

On the application of the guardians the Local Government Board may determine any question as to what amount may be paid under this section.

Section 2 of the Act removes any doubt as to the power of a local authority to pay the widow or other dependants of an officer or servant who dies while serving in or with His Majesty's Forces, or in consequence of wounds or disease received or contracted during such service, whatever sums would have been payable to her or them under any superannuation scheme had he died while in the actual service of the local authority. The section further legalizes any such payments which may already have been made in such circumstances by a local authority. The provisions of this section would not generally be applicable to the case of officers and servants of poor law authorities.

Section 3 provides that for the purposes of any statutory superannuation fund service in or with His Majesty's Forces shall be reckoned as service with the guardians, and that the officer or servant shall contribute the same amounts (if any) to the superannuation fund as if he had remained in the actual service of the guardians at his normal remuneration. Where, however, the guardians have already agreed to exempt the officer or servant from the payment of such contributions during his naval or military service, the Act will not require the payment to be made.

For the purposes of the Act, or for such of them as may be specified by the Local Government Board, service in connexion with naval or military operations which the Board consider may properly be treated in the same manner as actual naval or military service is to be deemed service with His Majesty's Forces. It appears to the Board that for the purposes of Section 3 of the Act all work in connexion with the supply of munitions and all service or employment in or about any institution used for the accommodation of sick or wounded sailors or soldiers, or for other purposes in connexion with the present war which may be undertaken with the permission of the guardians by their officer or servant may properly be treated in the same manner as actual naval or military service. For these purposes, therefore, this work is to be deemed to be service with His Majesty's Forces, and no further application need be made to the Board as regards the application of these provisions to such persons.

GENERAL COUNCIL

OF

MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1916.

Sir DONALD MACALISTER, K.C.B., President,
in the Chair.

DENTAL BUSINESS.

In accordance with the recommendation from the Dental Education and Examination Committee, the dental diploma newly instituted at the University of St. Andrews, the title of which is Licentiate in Dental Surgery, was recognized for entry on the *Dentists' Register*.

PRACTICE OF DENTISTRY BY UNQUALIFIED PERSONS. *Report.*

The report of the Committee also dealt with the subject of the practice of dentistry by unqualified persons. At a meeting of the Council on November 26th a motion was made by Dr. Newsholme, seconded by Dr. Verrall, in the following terms:

That in view of the large amount of practice of dentistry by unqualified persons, and of the fact that the number of dentists on the *Dentists' Register* has not increased since the *Register* was formed, the several licensing bodies be asked at the same time to make suggestions as to any modifications or curtailments of the curriculum which, in their opinion, may be practicable, without lowering the standard of dental practice.

The motion was referred to the Dental Education and Examination Committee for consideration and report. The report now presented pointed out that the motion

obviously opened the question not merely of the curriculum, but of any other causes which might be at work to deter students from entering, and questions submitted to the licensing and educational authorities were extended in this direction. The report stated that the replies were now complete, and continued as follows:

There is absolute unanimity in attributing any shortage there may be mainly to the inadequacy of the Dentists Act, and in the opinion of the majority this is the sole cause. This is also the unanimous opinion of your Committee.

With regard to the effect of the preliminary examinations, which are the same as those required of medical students, one body alone considers them too stringent—the Glasgow Incorporated Dental Hospital. The others agree that they are only deterrent to those unfit to enter upon professional study with advantage. But several bodies are of opinion that there should be more opportunity given for option in the subjects of examination, and especially that Latin should be an optional subject.

Your Committee, without expressing any opinion upon the subjects of the Preliminary Examination, are unanimous in considering that it should be the same for Dental as for medical students.

With regard to the length and stringency of the curriculum as a deterrent, there is a general opinion expressed that its effect is slight as compared with that of the legal position, and that without lowering the standard of dental practice no curtailment of the four years required is possible. The National University of Ireland, University College, Cork, however, advocates a shortening to three years for the present. But many suggestions, some of them entering into full detail, are made for the improvement of the curriculum, and for some rearrangement of the examinations.

In general terms the modifications suggested are in the direction of closer adaptation to the special needs of the dental practitioner, and involve material limitation of teaching in general subjects such as anatomy, physiology, surgery, and medicine.

In face of the body of opinion offered your Committee feel that these suggestions should be carefully co-ordinated, and the Committee's recommendations on the subject of the dental curriculum be considered in relation to them. This, however, involves work which will take time, and cannot be reported upon at this session.

It was moved by Dr. Magennis, seconded by Sir Bertram Windle, and agreed to:

That as it is expedient that the public should be enabled to distinguish between qualified and unqualified practitioners of medicine or of dentistry, and as a large number of persons who are practising dentistry under such conditions as to lead the public to believe they are qualified dentists, the General Medical Council do refer the question to the Dental Education and Examination Committee to take into consideration the best method for protecting the public from being deceived by such persons.

Your Committee, however, regret that they do not see any means which the Council could adopt which would be effective in preventing the public being deceived short of attempting to procure an amendment of the Dentists Act, a course which at the present juncture does not appear practicable.

Discussion.

The Chairman of the Committee, Mr. C. S. TOMES, in moving the adoption of the recommendation, suggested that those bodies which had not given detailed information but had suggested that modifications of the curriculum were desirable, should be invited to forward such information, and that the Committee should bring up a report next session on a comparison of the suggestions.

Dr. SAYNDBY inquired if the question of expense to the student, which was the most crucial matter, had been considered.

Mr. TOMES replied that certain bodies had called attention to it, but the fees were fixed by the schools over which the Council had no control.

Dr. NEWSHOLME moved that the report be referred back to the Committee for further consideration. The recommendation was entirely academic. The desirability of distinguishing between qualified and unqualified practitioners was recognized in 1914. The real question the Committee was asked to consider was whether any modification of the curriculum were possible and desirable without lowering the standard of practice. Although there had been an increase in the number of practitioners, it could not be maintained that it was commensurate with

the enormously increased demands on dentistry during the last thirty or forty years. The State had a large stake in the matter at the present time, as it had made itself responsible for the medical treatment of a third of the whole population. The treatment in a large proportion of cases was rendered futile by the presence of sepsis due to bad teeth; the treatment of tuberculosis also had been rendered less efficacious owing to defective teeth. The medical inspection of school children had produced a large and increasing demand for dentists throughout the country. There were 5,000 qualified dentists and 20,000 unqualified in this country. The condition would remain a grave reflection on the General Medical Council until it had taken every practical step to secure an increased number of qualified dentists; that object might be attained by a modification and also a curtailment of the curriculum. Without infringing the principle that there should be no lowering of the standard of practice, the Council was entitled to a report from the Dental Committee on the questions—first, whether there was a shortage of dental surgeons; secondly, whether a modification of the curriculum was practicable; and, thirdly, whether, in the opinion of the Committee, curtailment was possible without lowering the standard of practice.

Sir BERTRAM WINDLE seconded. The qualified dentist was at a disadvantage because he was under restrictions to which unqualified men were not subjected. That was the kernel of the whole situation, and until it was altered a large increase in registered practitioners could not be expected. He did not think a modification or curtailment of the curriculum would produce an appreciable increase, but great improvement could doubtless be introduced into it. The question of an adequate supply of dentists was of extreme importance to the country, and especially in Ireland.

Sir HENRY MORRIS was of opinion that it was impossible to alter the curriculum so as to diminish the time, and thereby the cost, but it might be modified so as to make it applicable to the career of a dentist after qualification, and bring it within four years instead of prolonging it to five, as it was now sometimes. He asked the mover and seconder of the amendment to accept in place of their amendment the following:

That a copy of the report be sent to each of the licensing authorities or dental schools. That the Committee consider any further communications which may be received from these on the subject of the curriculum, and the Committee be instructed to prepare for submission to the Council such proposals as may be deemed desirable for the modification of the curriculum.

Dr. MACKAY pointed out that the Council was dealing with an interim report which stated that the matters remitted to the Committee were still under consideration. He suggested that the Chairman of the Committee should not insist on the adoption of the report, and that the proposal to remit it back to the Committee should be withdrawn.

Sir HENRY MORRIS said in that case he would withdraw his suggestion to send the report to the licensing authorities concerned.

Dr. NEWSHOLME, with the consent of Sir Bertram Windle, accepted Sir Henry Morris's motion in place of his amendment.

Mr. TOMES, with the consent of the Council, then withdrew his motion for the approval of the report in favour of the amendment.

The PRESIDENT put the motion as modified:

That the Committee consider any further communications which may be received from the licensing authorities or dental schools on the subject of the curriculum, and the Committee be instructed to prepare for submission to the Council such proposals as may be deemed desirable for the modification of the curriculum.

This was carried, whereupon Mr. HODSDON moved:

That in the opinion of this Council it is urgently necessary in the public interest that steps be taken to amend the Dentists Act in order that the public may be enabled to distinguish qualified from unqualified practitioners as dentists.

In his opinion the real point which gave rise to the discussion was not so much the curriculum as the law.

Dr. LANGLEY BROWNE seconded.

Dr. LATIMER was strongly in favour of seeking further legislation, and that the Council should be consulted as to the drafting of it.

Dr. MACDONALD thought that a penal clause should be inserted in any new Act which would protect qualified practitioners from those who had possibly spent nothing on their curriculum.

The motion was then put and adopted, whereupon Sir BERTRAM WINDLE moved, Dr. SAUNDY seconded, and it was resolved:

That the Dental Committee be requested to obtain statistics as to the relative cost of the dental and of the medical curriculum.

Whereupon Dr. CATON moved, Sir JOHN MOORE seconded, and it was resolved:

That Dr. Newsholme be added to the Dental Committee until further order.

PUBLIC HEALTH.

The Council received the report of the Public Health Committee, which stated that it had considered the replies of the licensing bodies to a circular letter calling their attention to the figures in the statistical table presented to the Council on November 4th, 1915, and suggested that the further consideration of the statistics relating to the examinations for qualifications in public health should be deferred until the next session of the Council.

(To be continued.)

British Medical Association.

CURRENT NOTES.

NATIONAL COUNCIL FOR COMBATING VENEREAL DISEASES.
In reply to the request of the Council of the Association the Chairman of Representative Meetings (Mr. E. B. Turner, F.R.C.S.) has been placed on the Executive Committee of the National Council for Combating Venereal Diseases. This is a recognition not only of the official position of Mr. Turner but of his long experience and deep interest in the work for which the National Council has been established.

MEETINGS OF INSURANCE PRACTITIONERS.

In the last circular letter sent to Panel Committees the Insurance Acts Committee suggested that it might be helpful to insurance practitioners if Panel Committees or combinations of such would organize meetings to be addressed by some member of the Insurance Acts Committee of the Association to consider the National Health Insurance problems which will arise at the end of the war, if not before, and the ways in which the Association proposes to deal with them. The idea has been very favourably received and already arrangements are being made for meetings at Leicester, Liverpool, Coventry, and Newcastle-on-Tyne with the prospect of many more later in the year.

Meetings of Branches and Divisions.

DORSET AND WEST HANTS BRANCH.

THE annual meeting of the Branch was held at Wimborne on May 17th, when Dr. C. D. MUSPRATT, President, was in the chair.

Annual Report and Financial Statement.—The annual report of the Branch Council, presented by the HONORARY SECRETARY, showed a decrease in the membership of six. The financial statement for the year ending December 31st, 1915, which showed a balance in hand of £57 17s. 3d., was passed. The council reported that it had decided to pay the travelling expenses of members of the council in future.

Summer Meeting.—It was arranged to hold the summer meeting at Weymouth during the first fortnight in July.

Presidential Address.—The President-elect, Dr. W. H. L. MARRINER, then took the chair, and delivered his presidential address on "The nose, ear, and throat in general medicine."

Clinical Cases.—Dr. LE FLEMING of Wimborne showed a case of actinomycosis and a case of Raynaud's disease.

Luncheon.—The President and President-elect entertained the members to luncheon at the Crown Hotel.

Tea.—The proceedings closed with tea, at which the members were the guests of the Wimborne practitioners.

METROPOLITAN COUNTIES BRANCH

LAMBETH DIVISION.

A MEETING of the Lambeth Division was held at the Bethlem Royal Hospital on May 26th.

Election of Officers.—The following gentlemen were elected:

Chairman: Dr. G. B. Scott.
Vice-Chairman: Dr. F. H. Lane.
Honorary Secretary and Treasurer: Dr. T. H. Parkes Peers,
20, Surrey Square, S.E.
Representative at Representative Meetings: Dr. J. C. V. Denning.
Representative on Branch Council: Dr. H. H. Norton.
Executive Committee: Drs. S. S. Brook, A. R. French,
T. Huston, D. McCarthy, J. M. Stoker, M. Moran, G. R. Elwin,
E. Herrington, E. L. M. Rusby, A. R. Moore, F. J. Porter
Smith, R. Larkin.

Nominations for Branch Council.—The following were nominated for the Branch Council:—*President-elect:* Dr. Hawthorne.
Vice-Presidents: Drs. Brackenbury, Crosse, Durno, and T. H. Parkes Peers. *Treasurer:* Mr. Betham Robinson. *Secretaries:* Drs. Harman and Kingdon.

Payments under the Insurance Acts.—The recommendations of the Insurance Acts Committee for the settlement of accounts for 1915 were discussed and agreed to.

Fees for Notification of Infectious Diseases.—On the motion of Dr. PORTER SMITH, seconded by the SECRETARY, it was unanimously agreed to send the following resolution to the Secretary of the Local Government Board and also to the Chairman of the Central Council:

The members protest against the reduction of the notification fee for infectious diseases from 2s. 6d. to 1s. as being unfair to the medical profession, who have given their time and services for the country in every possible way at home and on war service.

MIDLAND BRANCH:

HOLLAND DIVISION.

THE annual meeting of the Division was held at the White Hart Hotel, Boston, on May 19th, when Dr. PILCHER, Chairman, presided.

Annual Report.—The SECRETARY reported a balance in hand on December 31st, 1915, of £6 4s. 8d. The report of the Executive Committee was received and adopted.

Election of Officers.—The following officers were elected:

Chairman: Dr. Witham.
Vice-Chairman: Dr. Pilcher.
Secretary: Dr. R. Tuxford.
Executive Committee: Drs. Braithwaite, Galloway, Morris, Munro, South, Walker, White, and Wright.
Representative on Branch Council: Dr. Mason.

At a joint meeting of the Holland and Kesteven Divisions held on the same day Dr. Tuxford was appointed Representative to the Representative Meetings.

LINCOLN DIVISION.

THE annual general meeting was held at Lincoln on May 26th, when Dr. GENNEY took the chair.

Annual Report.—The annual report stated that the number of members on December 31st, 1915, was sixty, as compared with fifty-seven at the corresponding period of 1914; that the balance in hand on December 31st was £1 11s. 3d.; and that twelve members of the Division were on active service, including the Honorary Secretary of the Division (Dr. Rainforth). The report was adopted.

Election of Officers.—The following officers were elected:

Chairman: Dr. Carline.
Vice-Chairman: Dr. Darbyshire.
Honorary Secretary and Treasurer: Mr. Godfrey Lowe (Lincoln).
Representative for Representative Meeting: Dr. McFarland.
Representative on Branch Council: Dr. Genney.
Executive Committee: Mr. E. C. Clements, Dr. E. B. Denny, Dr. Willoughby Smith.

Annual Representative Meeting.—It was decided to defer the consideration of the Provisional Agenda for the Annual Representative Meeting till the full agenda was available.

ULSTER BRANCH:

BELFAST DIVISION.

At the annual meeting of the Division, held in the Medical Institute on May 18th, Dr. SR. GEORGE (Lisburn) in the chair, the following officers were elected for 1916-17:

Chairman: Dr. W. R. Davison (Ballymena).
Treasurer and Secretary: Dr. W. L. Storey (Belfast).
Executive Committee: Drs. W. M. Burnside, *M. F. Cahill, T. C. D. Cathcart, *T. A. Davidson, J. R. Davison, *D. Gray, R. M. Fraser, *S. T. Irwin, R. W. Leslie, W. M. Lorinan,

*A. G. Robb, J. Rusk, F. C. Smyth, D. H. Tweedie, R. Watt, all of Belfast; *H. J. Boyd (Hillsborough), J. A. Clarke (Carrickfergus), A. McN. D'Evelyn (Ballymena), W. D. Donnan (Holywood), C. K. Darnell (Bangor), *R. Reid (Whiteabbey), *D. P. Gausson (Dunmurry), G. St. George (Lisburn).
Representative to Annual Representative Meeting: Dr. W. L. Storey.

* On the Branch Council.

YORKSHIRE BRANCH:

SHEFFIELD DIVISION.

THE annual meeting of the Sheffield Division was held on May 23rd, and to it members of the Rotherham Division were invited for the purpose of electing members to represent the constituency of Sheffield and Rotherham on the Representative Body.

Election of Officers.—The following officers were elected:

Chairman: Dr. Dawes.
Vice-Chairman: Dr. O. H. Hudson.
Honorary Secretary: Dr. Sophia Wits.
Honorary Auditors: Drs. Brown and Kilham.
Representatives on Branch Council: Drs. Forbes, Sinclair White, Garrick Wilson and Husband.
Representatives on Representative Body: Drs. Husband and Slack.

Members of Executive: Drs. P. Bennett, Forrest, Innes Smith, G. Mathieson, Hardy, Holroyd, A. E. Barnes, King, Herbert Hallam, Furey, Mylan, Caiger, J. H. Wilson, Harrison, Johnston, S. Barber, McKenna, France, Gordon, Paterson, Helm, Wiseman, Nutt, Kilham, Sime, Kemp and Thompson.

Contract Practice.—The rules, to govern contract practice, which were brought before the meeting, were referred back to the Executive Committee.

Association Notices.

MEETING OF COUNCIL.

THE next meeting of Council will be held on Wednesday, June 28th, in the Council Room, 429, Strand, London, W.C.

By order,

GUY ELLISTON,
Financial Secretary and Business Manager.

June 1st, 1916.

GRANTS IN AID OF SCIENTIFIC RESEARCH.

THE Council of the British Medical Association is prepared to receive applications for grants in aid of Research into the Causation, Treatment, or Prevention of Disease. Preference will be given to medical practitioners and to applicants who propose to investigate problems directly related to practical medicine.

Applications for grants must be received not later than June 17th, 1916, and must be made on the prescribed form which, together with the Regulations governing such grants, can be obtained on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

UNITED KINGDOM CONSTITUENCIES IN
REPRESENTATIVE BODY, 1916-17.

THE Council in January, 1916, provisionally grouped the Home Divisions in constituencies for the election of Representatives in the Representative Body, 1916-17, in the same way as for 1915-16. A list of the 1915-6 constituencies was published in the SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL of July 3rd, 1915 (p. 9), and copies (D 4) were also forwarded to the Divisions and Branches on December 6th, 1915.

The Organization Committee, under instructions of the Council, has considered the latest membership figures, and has decided that such changes of Division memberships as have occurred since the provisional scheme of constituencies, 1916-17, as above, was adopted by the Council do not call for any change in the grouping.

The Home Constituencies in the Representative Body, 1916-17, will thus be the same as for 1915-16.

Constituencies are reminded that, under the By-laws, Representatives must be elected not less than four weeks before the Annual Representative Meeting, 1916, to be held in London on July 28th, and that their names must be notified to the Medical Secretary by July 7th. Representatives can, if necessary, be elected and instructed by one and the same meeting of the constituency.

By order,

ALFRED COX,
Medical Secretary.

June 6th, 1916.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH.—Dr. William H. Wynn, Honorary Secretary, gives notice that the annual meeting of the Birmingham Branch will be held on Thursday, June 22nd, at 3.30 p.m. Business: Annual reports; election of officers. The President for the ensuing session, Dr. W. R. Jordan, will deliver his inaugural address.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.—Mr. H. L. Evans (101, Prince's Avenue, Hull) gives notice that the annual meeting of the Division will be held at 12.30 p.m., in the Lloyd Hospital, Bridlington, on Thursday, June 29th. Business: To receive the annual report and financial statement. To elect officers.

FIFE BRANCH.—Dr. G. C. Anderson, Honorary Secretary (Denbeath House, near Methil, Fife), gives notice that the annual meeting of the Branch will be held in the Station Hotel, Kirkcaldy, on Friday, June 9th, at 3.15 p.m., when it is proposed to adopt the ethical rules approved by the Annual Representative Meeting, 1915.

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman (Honorary Secretaries) give notice that the annual general meeting of the Branch will be held at 429, Strand, W.C., on Tuesday, June 27th, at 4 p.m. The business will be: (1) Report of scrutineers as to the election of new officers. (2) The annual reports of council and of representatives of the Branch on the Central Council. (3) Alteration of Rule 7 b. (4) The adoption of the revised ethical rules as approved by the Annual Representative Meeting, 1915. (5) President's address: Medical Administration of Modern Armies.

METROPOLITAN COUNTIES BRANCH: EAST AND WEST HERTFORDSHIRE DIVISIONS.—Dr. H. D. Ledward and Dr. C. Herbert Hall, Honorary Secretaries respectively of the East and West Hertfordshire Divisions, give notice that the annual meetings of the Divisions will be held jointly at 3 p.m. on Wednesday, June 21st, at the offices of the Association, 429, Strand, W.C. Business: To receive the annual reports, elect officers, and consider the agenda of the Annual Representative Meeting.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—Dr. James Hudson gives notice that the annual meeting of the Newcastle-on-Tyne Division is to be held at 23, Ridley Place, on June 16th, at 8.30 p.m.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: FURNESS DIVISION.—Drs. George Alexander and A. E. Thompson, Honorary Secretaries, give notice that the annual meeting of the Furness Division will be held in the Masonic Hall, Barrow, on Friday, June 9th, at 3.15 p.m. Agenda: Annual report; election of officers; adoption of new ethical rules; discussion on the reduction of notification fees; any other business.

INSURANCE.**IRELAND.****DEFERRED PAYMENTS FOR THE CERTIFICATION OF SICKNESS BENEFITS.**

The National Health Commissioners (Ireland) have written to the Medical Secretary of the Irish Medical Committee, stating that the delay in making payments to the panel doctors for the quarter ending December 31st, 1915, is due to the impossibility of obtaining definite figures as to the diminution in the number of insured persons due to recruiting during the war. Deductions of payment were provisionally made on account of recruiting from the amounts which would ordinarily have been due to the panel doctors for the periods ended December, 1914, and March, 1915, and as the panel system ceased on December 31st last, payments for the final period could not be made until the proper adjustments are made in doctors' accounts in respect of the amounts deducted in previous periods. The required figures are now available, and the Commission hope to have the adjusted payments for the December quarter made at an early date.

The delay in paying for the certification of sickness benefits for the quarter ended on March 31st last is altogether due to the failure of a very considerable number of doctors to forward their returns to the Commissioners, notwithstanding that they were requested to do so on two different occasions. In this respect, however, matters have very much improved within the past week. The Commissioners complain that many doctors have neglected to mention in the certificate blocks the dispensary district in which the insured person resides, thus causing them much unnecessary trouble, particularly as they agreed last December, when in negotiation with

the representatives of the profession, to make the dispensary district in rural areas the unit for the distribution of the grant for certification. It is to be hoped in these small matters, as the result of experience, the Commissioners will have little reason to complain when they come to pay the doctors for the June quarter.

INSURANCE NOTES.**THIRD PARTIES AND COMPLAINTS AGAINST PANEL PRACTITIONERS.**

At a meeting of the London Insurance Committee on May 25th the frequency with which cases of complaint against panel practitioners are brought forward by third parties, very often, apparently, without the knowledge and consent of the insured person, came up for discussion, and a recommendation was agreed to that the Medical-Service Subcommittee be empowered to obtain a written statement from the insured person that it is by his wish that the question has been raised, the practitioner being otherwise under no contractual obligation to answer a question raised by a third party. This, of course, does not apply to questions raised by approved societies with regard to certificates, nor to complaints relative to deceased insured persons.

DENTAL TREATMENT.

In reply to Mr. Raffan, who on June 1st asked a question as to whether an approved society could expend any portion of its funds upon the provision of dental benefits for its members, Mr. C. Roberts said that, in accordance with Section 37 of the Act of 1911, the additional benefits specified in Part II of the Fourth Schedule to the Act could only be provided in a society whose funds showed a surplus on valuation. It was, however, within the competence of a society to make subscriptions or donations under Section 21 of the Act to a charitable institution having among its objects the provision of dental treatment which was available for the members of the society. A society could, he believed, only give dental benefit to its members directly after a valuation and as the result of a declaration.

CORRESPONDENCE.**PROPOSED EMERGENCY SETTLEMENT OF PANEL PRACTITIONERS' ACCOUNTS FOR 1915.**

CAPTAIN GORDON WARD, R.A.M.C., writes: I wish to protest emphatically against the agreement for the payment of our fees suggested and blessed by the Insurance Acts Committee in the SUPPLEMENT of May 27th.

In common with the majority of panel practitioners, I have never acknowledged the right of the Commissioners to employ any method of calculation which has the effect of setting aside for our payment any sum less than 7s. (7s. 6d. or 9s. in some cases) a head a year. Also, in common with the majority of panel practitioners, I look forward and, as far as may be, prepare for the time when we shall be able to enforce our demands by effective combined action.

The arrangement or agreement referred to approves of an even less controllable method (and thereby amount) of payment. That this new method is likely to produce results in the least commensurate with our proper claims is not suggested by the Insurance Acts Committee, then why for the sake of still highly problematical gains in punctuality of payment does this Committee tacitly admit the justice of the extraordinary methods by which our remuneration is calculated? The Insurance Acts Committee "satisfied itself by inquiries that a very close estimate could be made by the means suggested." A close estimate to what? Not, be it noted, to our just claims, but to the results (frankly underpaying us) which have been attained hitherto.

As a profession we are, I think, honest men. We pay our servants what we have promised to pay them, and not a penny less. We expect our leaders to exact such terms for us. We do not expect them to enter into collateral agreements which inferentially admit the justice, or even the expediency, of any other course.

At present the existence of an appalling national emergency is being used to keep us quiet while we are officially robbed (reduced notification fees, inflated deductions for enlistments, continued use of expensive aqua dest., long-deferred payments, increased clerical work by abolition

of "Rep. mist." etc.). Later, a huge national indebtedness will no doubt be used as an excuse for further robbery. One can very well foresee how the politician will insinuate that the doctors are not willing to pay their share of the war if we dare to protest against further reductions of fees.

Do our leaders in the Association see and foresee these things? There is, one notes with regret, but little sign of it. Is there one member of the Insurance Acts Committee who asked, when this new agreement received approval, that it should be plainly stated that it must in no way prejudice our claim for full payment as originally promised? Is there a member who even saw that it did prejudice that claim? There is no sign that such members existed.

So do we fall a ripe and ready prey into the hands of the politicians, and thereto the Association leads us. I am proud to belong to a Panel Committee that is consciously and continually preparing for the fight for our rights (except that I am in no way proud but profoundly humiliated in that circumstances have forced me to have anything to do with the Acts at all), and, I should add, for the rights of the insured, too. The feeling of that committee I know well. It has tried to regard the Association as the guardian of our rights and the leader-to-be of our resistance.

At present it views the Association with precisely the confidence and respect with which it views, for instance, the promises of Sir Robert Morant.

LOCAL MEDICAL AND PANEL COMMITTEES.

DUREAM COUNTY.

At a meeting of the Panel Committee on March 17th a scheme for the payment to practitioners for the supply of drugs and appliances in pursuance of Clause 12 of their agreement at a capitation rate of 1s. 6d. per 100 insured persons on their lists resident at a distance of one mile or less from the place of business of the nearest chemist, and at a capitation rate of 1s. per 100 insured persons for all other insured persons on their lists, was adopted and forwarded to the Insurance Committee for approval.

A scheme for the distribution of any special fund made available in the area for the payment of mileage to practitioners in respect of the year ended December 31st, 1915, was provisionally approved.

EAST SUSSEX.

At the May meeting of the Local Medical and Panel Committees it was resolved to ask the British Medical Association to endeavour to secure (1) that practitioners supplying drugs and appliances should have extra remuneration corresponding with the rise in cost; and (2) a special reduction in the price of petrol used by practitioners, and the cost of their motor licences.

REDUCTION OF NOTIFICATION FEES.

THE NOTIFICATION OF INFECTIOUS DISEASES.

SIR, -With your permission I desire to say a word in support of Dr. A. A. Mackeith's suggestion (BRITISH MEDICAL JOURNAL, June 3rd, 1916, SUPPLEMENT, p. 129), that the profession should attempt to escape from the statutory duty of notifying the occurrence of infectious diseases to the public authorities. The practitioner is summoned not as a Government official but as the private adviser of the patient, and he ought not to be compelled to reveal what he learns in this capacity. Let him give the needed information to the head of the household, from whom the law may force any revelation which the public interest requires. This interest, to take a further point, demands early notification in order that the risk of epidemic extension may be lessened. But under the existing conditions the practitioner is compelled to postpone his certificate until he is confident of a specific diagnosis. The public advantage would be much better served were it sufficient for the practitioner to tell the responsible householder that there was reason to believe that the patient was suffering from "an infectious disease." When the householder had conveyed this information to the medical officer of health it would be for the latter to take the necessary steps for the protection of the public. The present practice promotes delay where promptness is required; it invades the confidential relations which ought to exist between doctor and patient; and while compelling the practitioner to act as a Government servant, it fails to provide him with Government protection. So long as the profession accepts without protest these conditions, it allows the invasion of a claim which it is a public interest to maintain, namely, the confidential character of the communications made by a patient to his medical adviser. -I am, etc.,

London, W., June 5th.

C. O. HAWTHORNE.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following notifications are announced by the Admiralty: Fleet Surgeons P. H. Boyden, M.D., and W. G. Thwaytes, M.B., to the President; P. H. Bannister to the *Falmouth*; J. P. H. Greenhalgh, M.D.; T. T. Jeans, M.B., and E. R. Grazebrook to the *Victory*; J. E. Coad, M.B., to the *Neptune*. Fleet Surgeon R. S. Bernard is placed on the retired list. Staff Surgeons R. Kennedy to the *Pembroke*, additional; N. H. Harris to the *Pembroke*; B. S. Robson to the *Birmingham*; G. F. Syms to the President, additional. Surgeon A. R. Price to R.N. Hospital and Yard, Bermuda. Temporary Surgeons A. D. Milligan, M.B., R. S. Lawson to the *Pembroke*, additional; C. Y. Eccles to the *Indomitable*; R. P. Ninnis, M.B., to the *Neptune*; A. W. North to Haslar Hospital; A. L. P. Gould, M.B., to the *Vivid*, additional; P. W. Carruthers, M.B., to the *Pembroke*; H. Wetherbee to the President, additional for R.N.A.S.; E. M. Molesworth, M.B., to the *Sydney*.

ARMY MEDICAL SERVICE.

To be temporary Colonels whilst Assistant Directors of Medical Services: Brevet-Colonel F. Smith, C.M.G., D.S.O., Lieutenant-Colonels J. Poe, D.S.O., M.B., A. W. N. Brown, R. J. Blackham, C.I.E.

ROYAL ARMY MEDICAL CORPS.

Temporary Colonel R. T. Leiper, M.B., relinquishes his commission. Lieutenant-Colonel C. T. Blackwell, M.D., is retained on active list under the provisions of Articles 120 and 522 Royal Warrant for Pay and Promotion, 1914, and to be supernumerary.

Temporary Captain H. W. M. Tims, M.D., to be temporary Major. Temporary Captain R. B. Llewellyn, M.B., relinquishes his commission.

To be temporary Captains: Captain G. H. Clark, M.D., Unattached List, T.F., J. A. Turner, C.I.E., M.D., temporary Lieutenants F. W. Milne, M.D., A. D. Forbes, M.B., A. W. Owen, M.D.

Temporary Captain R. E. N. Martyn-Clark is dismissed the service by sentence of a general court-martial.

Officers of the Canadian A.M.C. to be temporary Lieutenants: L. E. Bolster, M.D., W. G. Shaw, W. A. Cardwell, M.B.

Lieutenants, Canadian Army Corps, to be temporary Lieutenants: J. W. Evans, M.D., M. A. Mackinnon, M.B., R. Stipe, M.D.

To be temporary Lieutenants: S. H. Calneek, A. T. Thurston, F.R.C.S.I., J. J. Shennon, M.B., A. P. MacMahon, M.B., A. Morton, M.B., T. S. Paterson, M.B., W. J. Poole, M.B., W. M. Stewart, M.B., J. L. Torley, M.B., R. Lindsay, M.B., J. W. Macfarlane, M.B., D. McLaren, M.B., F. R. Martin, M.B., W. W. Morrison, M.B., D. H. Coats, M.B., W. K. Connell, M.B., A. S. Cook, M.B., W. D. Allan, M.B., T. H. V. King, P. C. Foulkes, M.B., S. G. Harrison, N. H. Smith, M.B., H. H. Lawrence, J. A. Tobin, M.B., R. G. Gillies, M.D., R. H. C. O. Wisdom, A. A. Greenwood, M.B., G. Fehrsen, W. B. Knobel, M.D., P. S. Marshall, G. T. Garraway, J. P. Pegum, W. J. Moir, M.B., A. N. Haworth.

Temporary honorary Lieutenants to be temporary Lieutenants: J. G. Jones, V. C. James, N. M. Cummins, M.B., L. G. Jacob, R. H. Fleming, M.B., R. O. G. Michelmore, T. T. B. Watson, W. G. Newcomb.

To be temporary honorary Lieutenants: R. H. Maingot, H. G. E. Williams.

INDIAN MEDICAL SERVICE.

Surgeon-General Sir C. P. Lukis, K.C.S.I., M.D., F.R.C.S., K.H.S., has been appointed to be temporary Director Medical Services in India, with effect from April 15th, 1916.

The following Lieutenant-Colonels have been advanced to the higher position of their rank under Article 8 of the Royal Warrant of May 28th, 1913: Lieutenant-Colonel D. T. Lane, M.D., from April 1st, 1915; Lieutenant-Colonel R. C. Macwatt, M.B., F.R.C.S., C.I.E., from April 1st, 1915; Lieutenant-Colonel W. H. E. Woodwright, F.R.C.S.I., from June 21st, 1915; Lieutenant-Colonel W. J. Buchanan, M.D., C.I.E., from July 12th, 1915; Lieutenant-Colonel J. K. Close, M.D., from December 1st, 1915.

Major G. E. Stewart, M.B., F.R.C.S.E., has been confirmed in civil employment under the Government of Bombay with effect from November 18th, 1915.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenant (on probation) D. H. Paterson, M.B., is confirmed in his rank.

Lieutenants to be Captains: P. B. Corbett, M.B., W. W. Blair, M.B., W. W. S. Sharpe, M. J. Graham, M.B., P. W. Edwards, M.B., W. B. A. D. Sutton, O. D. Price, M.B., J. B. Cavanagh, M.B.

Lieutenants on probation confirmed in their rank: J. A. Crawford, M.B., G. Morris, M.B., R. P. Brown, M.B., H. D. Wright, M.B., W. H. Ferguson, M.B.

To be Lieutenants on probation: A. A. Dear, M.B., Ex-Cadet Sergeant H. S. Evans, Cambridge University Contingent, O.T.C.

OVERSEAS CONTINGENTS.

CANADIAN ARMY MEDICAL CORPS.

Lieutenant-Colonel W. A. Scott to be temporary Colonel. To be temporary Lieutenant-Colonels: A. W. Tanner, C. A. Peters, S. W. Hewetson, G. E. Beauchamp, P. J. Decarie, Z. Rheumay, Majors E. G. Davis, E. J. Williams, J. McCombe, F. W. E. Wilson, H. A. Chisholm, D.S.O. To be temporary Majors: J. Macoun, T. McLeask, A. T. Bazin, F. H. Mayhoad, N. K. Wilson, J. O. Lacroix, G. Bourgeois, H. M. Du Hamel, G. Archambault, J. A. Lussier, A. N. Rivet, and Captains W. B. Howell, J. G. Browne, P. K. Menzies, W. H. K. Anderson. To be temporary honorary Major: C. W. Buckley. To be Captains: R. Parsons, W. L. Tyrer. To be temporary Captains: A. E. Cote, C. H. C. Beil, C. D. Hewett, H. W. Wadge, C. W. Johnston, A. A. Drinnan, J. T. Mulvey, H. H. Eyres, J. C. Tull, F. J. Tees, D. Waterston, A. Ross, G. O. Wood, C. G. Gunn, J. A. Reid, B. J. Washburn, H. G. Chisholm, A. W. Park, R. Sanson, J. J. Jamieson, A. Lawther, E. P. Lewis, R. Tessier, J. U. Gariepy, L. de G. Joubert, L. Collin, J. A. Tournais, E. G. Dagenais, L. Blagdon, A. Larose, J. J. Trudel, J. A. Tournais, J. McCaffrey, M. Dolbec, A. Lamontagne, A. J. Lafleur, P. Gauthier, J. E. N. De Haire, F. Demers, E. Mallette, A. Dumont, G. Lefebvre, J. W. Ladouceur, H. C. Clermont, J. B. Trudelle, D. B. Lazier, Sergeant C. K. Dowson, E. L. Pope, C. E. Hanna, G. F. Seaborn, Private H. G. Gillissie from 52nd Canadian Inf. Batt., V. Bourgeault; Lieutenants J. G. Gunn, B. B. Almqvist, A. E. Fope, C. A. Langmaid, L. L. Stauffer, H. G. Wood, A. J. Martin, H. C. Moses, D. G. Turnbull, M. E. Graham, L. B. Graham, E. J. Manion, C. R. Walsh.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London Casualty Clearing Station.—J. C. Newman, M.B., F.R.C.S., to be Lieutenant.

London Field Ambulance.—To be Captains: M. T. G. Clegg, late Lieutenant (temporary Captain), London Brigade, R.F.A.; Captain G. H. L. Whale, M.D., F.R.C.S., from a general hospital.

London Mounted Brigade Field Ambulance.—Captain (temporary Major) W. P. Thomas, M.D., relinquishes his temporary rank on ceasing to command a field ambulance.

London Sanitary Company.—Lieutenants to be Captains: H. J. L. Barefoot, R. E. Hebblethwaite.

Home Counties Field Ambulance.—Captain G. W. C. Hollist, from a casualty clearing station, to be Captain.

South Midland Mounted Brigade Field Ambulance.—Captain A. Leggett, M.B., to be temporary Major whilst commanding a field ambulance.

East Anglian Field Ambulance.—To be Captains: Lieutenants E. J. Staddon and R. J. R. Mcreedy. To be Lieutenant: N. R. Williamson, M.B.

Northern General Hospital.—Lieutenants to be Captains: F. Harvey, N. J. Wigram.

West Riding Field Ambulance.—Lieutenant H. A. Beetham, M.B., to be Captain.

East Lancashire Field Ambulance.—Captain F. C. Bentz, M.B., relinquishes his commission on account of ill health; Lieutenant C. W. Fort, M.B., to be Captain.

West Lancashire Field Ambulance.—Lieutenant A. S. Parkinson, M.D., from a Lancashire Field Ambulance, to be Lieutenant.

Wessex Division Sanitary Section.—Lieutenant W. H. Biggs to be Captain.

Welsh Field Ambulance.—Major A. R. Wilson, M.D., to be Lieutenant-Colonel.

Lowland Mounted Brigade Field Ambulance.—Captain (temporary Major) R. Y. Anderson, M.B., to be Major.

Highland Field Ambulance.—Majors A. E. Kidd, M.B., and D. Rorie, M.D., to be temporary Lieutenant-Colonels whilst in command of a field ambulance.

Supernumerary for Service with O.T.C.—Lieutenant E. W. Walker to be temporary Captain while serving with the Medical Unit of a University Contingent, Senior Division, O.T.C.

Attached to Units other than Medical Units.—Major J. Griffiths relinquishes his commission on account of ill health. Captain (temporary Major) H. F. Everett relinquishes his temporary rank on ceasing to command a field ambulance. Lieutenant W. C. D. Hills to be Captain. A. Iredale, M.B., to be Lieutenant.

TERRITORIAL FORCE RESERVE.

ARMY MEDICAL SERVICES.

Lieutenant-Colonel (temporary Colonel) H. T. Challis, M.D., from A.D.M.S., to be Lieutenant-Colonel.

Vacancies and Appointments.

VACANCIES.

THE POSITION OF MEDICAL MEN UNDER THE MILITARY SERVICE ACTS.

The following letter and memorandum have been issued by the Director-General, Army Medical Service:

LETTER FROM THE DIRECTOR-GENERAL, A.M.S.

War Office, Whitehall, S.W.,
7th June, 1916.

To Members of the Medical Profession.

DEAR SIR,

I am extremely anxious to draw your attention to the particular provisions of the Military Service Acts, and of the Regulations now made thereunder, which concern the medical profession. For this purpose I have thought it may be convenient that a special Memorandum should be prepared on the subject, which should note the main points of practical importance to practitioners and the chief considerations, medical, military, and civil, that have been involved in the problem.

I enclose such a Memorandum with this letter, and I am convinced that it is of the highest importance that every practitioner should familiarize himself at once with the exact position, in regard to himself and to the profession generally, which has been brought about by the new conditions, as therein set out.

I desire to emphasize the fact, which will be clear to you, I think, on reading the terms of the Memorandum, that the scheme must, of necessity, depend for its successful working upon the support and co-operation of the whole profession. It is, I believe, impossible to exaggerate the importance of this effective co-operation; by this alone will it be possible to justify and maintain the very special arrangements now sanctioned by Parliament for the medical profession in relation to military service.

I need hardly remind my professional brethren that in the present circumstances of the nation the medical profession is under a very great responsibility for the welfare both of H.M. Forces and of the civil population. The profession has now been entrusted, in a very special manner, as is explained in the Memorandum, with the responsibility of working out, in co-operation with the Government, what I may perhaps call the mobilization of the whole of the medical services of this country for its civil needs; on such lines as shall enable the pressing requirements of the Army to be met with the least possible injury to the civil population. A higher responsibility, a more inspiring opportunity, could hardly be imagined for any profession; and, as a member of the medical profession myself, I make no apology for being proud that this call has come to it.

I should like to state how deeply sensible I am of the spirit in which large numbers of medical men have rendered and are rendering essential service to the nation; and I wish to make it absolutely plain that the purpose of the Scheme described in the Memorandum is to assist the profession in this great task which I am assured it is most anxious to fulfil—the task of securing the best possible disposal of the energies of the medical men throughout the country by the utilization of the skill of each practitioner in the sphere in which he is found to be most needed at a given time.

I am convinced by my close and continuous observation of the problem that it is only by means of such a national organization of medical services, effected by the profession itself, that the profession can be assured of serving the country with the maximum of efficiency and with the minimum of disturbance and friction in the case of individual practitioners.

Under the Scheme shown in the Memorandum—given the keen co-operation of the whole profession—I earnestly hope it will prove possible to meet the urgent and ever-varying needs of the Naval and Military Forces for medical officers, and at the same time to maintain, without risk of a breakdown, those medical services which are indispensable to the general civil population—services that are especially vital in time of war in those industrial areas where medical provision is, even in normal circumstances, no more than adequate for essential requirements. This great task can only be achieved, on the lines shown in the Memorandum, by the strenuous and continued efforts of all the members of the profession in all parts of the country.

There is one further point of very great moment which I must emphasize, and on which I must make a personal appeal to those of my professional brethren whom it directly concerns. While the smooth working of the Scheme can, as already shown, only be effected by engaging the patriotic support of every practitioner, I am bound in a very special manner to beg the attention of men between 41 and 45 years of age to the manner in which they in particular have it in their power to mar or to contribute to its success.

To every practitioner between these ages, I would say that, while not liable to the provisions of the Military Service Acts, it is open to him (I hope each one will consider whether it is not indeed incumbent on him) to offer himself, by enrolment, as one who may be selected, if needs be, for professional service with the Forces, at home and abroad. It is estimated, on a careful investigation of available figures, that the full acceptance, by the men of these ages, of this opportunity of rendering service to their country would secure an addition of some 40 per cent. to the number of practitioners now otherwise eligible for

selection (if required) for commissions in the Royal Army Medical Corps.

Practitioners between 41 and 45 years of age are, in fact, in a position, by now enrolling, to assist in a peculiarly important degree the achievement of the objects of this Scheme for the organization of the profession, thus enabling the Government both to meet the pressing needs of the Forces at home and abroad, and to ensure the maintenance of an adequate medical service for the civil population.

I desire to commend the whole Scheme to your careful consideration.

I am, yours very truly,

ALFRED KEOGH,
Director-General, Army Medical Service.

MEMORANDUM.

THE NATIONAL ORGANIZATION OF THE MEDICAL PROFESSION IN RELATION TO THE NEEDS OF H.M. FORCES AND OF THE CIVIL POPULATION AND TO THE MILITARY SERVICE ACTS.

IN virtue of the compulsory provisions of the Military Service Acts, doctors up to the age of 41, whether married or single, are under the same statutory obligation as other citizens to serve in H.M. Forces for the duration of the war. The medical man, however, is in a very special position in the following respects: firstly, he is needed in the Navy and Army to render there the same kind of services that he fulfils in civil life; secondly, arrangements can be made in a large number of cases for carrying on his civil work, when he joins the forces, in a manner that will conserve to him or his family, in addition to his military pay, a substantial proportion of the remuneration he would have received had he remained in civil life; thirdly, this bringing about of an arrangement for carrying on his civil duties is often essential in the interests of the civil population and a necessary element in determining which of the men in a given place can most wisely be selected for the Army Medical Service; but, fourthly, the making of such arrangements must rest, of necessity, with the members of the medical profession.

For these reasons, two special arrangements have been provided under the Military Service Acts in regard to the medical profession: (i) A special procedure as to questions of exemption of doctors from ordinary military service; and (ii) a special procedure for selecting, and at the right time in each case, the particular men who can be spared from their civil work to serve as doctors with H.M. Forces with least injury to the civil population, and for retaining in their civil work those who are most needed there in the public interest.

Since both of these processes can be made properly efficient by means only of a *professional* body, having full professional knowledge, Parliament has enacted in Section 7 of the new Military Service Act that the question whether a given doctor is to be taken to serve the Army, or is to continue to do his work for the civil population, shall be decided by a Central Professional Committee, instead of by the ordinary Tribunals.

Now it is clear that before any Central Professional Committee can arrive at a wise decision in any given case, it must be in a position to make an accurate comparison of the situation (in different areas, and as between different doctors) as regards the existing supply of medical attendance, of the various types necessary for the civil population. This is especially important in regard to the poorer areas, where the provision in normal times is often barely sufficient for the minimal needs of the people; whereas in several places there can be found a considerable redundancy of medical men, many of whom can quite well be spared before the local supply of doctors would be brought down to the level obtaining in normal areas. (The proportion of doctors to population is known to vary very widely, being as low as one to 5,000 in some areas, and as high as one to 800 in others.) And in order to be able to make the necessary comparisons equitably, it is necessary in the first place that the whole supply of doctors of various types in all parts of the country shall have been carefully surveyed, not only on a basis of detailed local knowledge, but also on a comparative basis, from one central standpoint. It is further important that in the process of comparison and selection there shall be within the field of consideration the largest possible number of doctors, including particularly all those in the areas of redundancy as well as the others; for, though many thus included will be over the age for military-medical service, these can be brought into effective count by their taking practical part in arrangements for carrying on the civil practice of some

of the men who can in that event, but not otherwise, be spared for the Royal Army Medical Corps.

This very important task of organized selection requires for its proper performance the existence of organizations for collecting detailed local information in all parts of the country, and of a central body, in close connexion therewith, for appraising the information, when collected, on a sound comparative basis, with a reasonably uniform standard, upon equitable profession principles, from a central standpoint, entirely free from personal bias or local prejudice. It is therefore obviously not a task that could have been undertaken at a moment's notice, nor properly achieved if only entered upon at this advanced period of the war.

There was, however, available to the Government an organization of the kind required, both local and central, which has for some time past been in effective operation, in England and Wales, and a similar one also in Scotland, having been set up by the Medical Profession itself, in the early months of the war, with the co-operation of the Medical Department of the War Office, for these purposes, long before there was any question of compulsory service.

This National Organization of the Medical Profession is now in three parts:

- (a) The Central Medical War Committee for England and Wales, a body composed of representative medical men of all types in the profession (*see list below*).
- (b) The Committee of Reference appointed (*see list below*) by the Royal College of Physicians of London and the Royal College of Surgeons of London, and consisting of Fellows of those Colleges, to consider cases of doctors on the staffs of hospitals and medical schools in the Metropolis, and such other special cases in England or Wales as may be referred to it; and
- (c) The Scottish Medical Service Emergency Committee for doctors in Scotland, comprising representative men of all types in the profession in Scotland (*see list below*).

The first and third of these bodies have local Professional Committees under them, each serving a particular geographical area, which represent and were appointed by the medical men in that area.

This comprehensive and representative professional organization has already been utilized by the War Office in many ways, and also by the Central Tribunal under the Military Service Act in the decision of particular doctors' cases; but its main function has been the selection, from time to time, of suitable medical men to be offered commissions in the R.A.M.C., and in particular the establishing and conducting, with the Army Council's approval, of a comprehensive Enrolment Scheme† for all qualified medical men up to 45 years of age—this being the limit for general service in the R.A.M.C.

This Enrolment Scheme is an officially approved arrangement whereby any duly qualified medical man under 45 years of age, who is willing, is able to enter his name on the Enrolment Register of these Professional Committees as prepared to accept a commission in the R.A.M.C., if and when offered one, undertaking thereby to accept service accordingly, at whatever time (if any) the Committee, after considering all relevant circumstances, shall consider that it is his turn to be selected by the War Office for that purpose. In recognition of the voluntary character of the service thus offered, the Army Council have undertaken that a man thus offering himself should have always at least a month's notice before being taken, that he should not be called on to fulfil his obligation of commissioned service for more than twelve months consecutively, and that he should have a certain stated rate of remuneration during the present war.

Under this Scheme a very large number of doctors have enrolled, and the Central Committees have compiled a Register from the detailed information collected and sent up by their local Professional Committees, indicating the available men of various types in each area, with useful particulars of various kinds in regard to them.

The Government Departments having official relations with the medical profession, *e.g.*, the Local Government Board, the Insurance Commissioners, and others, have worked in close co-operation with the Scheme, and representatives of those Departments and of the War Office attend the meetings of the Committee.

This being the officially recognized organization for coordinating the voluntary offers of medical service for the

* An analogous committee exists also in Ireland; but the present memorandum deals only with Great Britain.

† In Scotland the term used is Registration, but in this memorandum the one word only is used throughout for convenience.

Naval and Military Forces, steps were taken by the War Office on the passing of the first Military Service Act, and the consequent introduction of compulsory military service for all unmarried doctors under 41 years of age, to secure that those who had thus volunteered should not be prejudiced thereby, and that the fullest use should be made of the Scheme in all its possibilities.

With this object the Army Council arranged and announced publicly, firstly, that no doctor who had signified his willingness to accept a commission in the R.A.M.C. would be taken as an ordinary combatant; and, secondly, that *men who had enrolled under the national organization scheme of the profession above described would not be called up under the compulsory provisions of the Act, but would be left automatically by the Recruiting Authorities in the reserve until selected for a commission in the Royal Army Medical Corps.* This was laid down in Army Council Instruction 485, which has been made widely known through the professional press.

Since that date this enrolment has continued, and the Professional Committees have largely extended the scope of their information; and when the introduction of the second Military Service Bill brought into view the application of compulsion for all medical men (as for other citizens), married as well as single, up to 41, thus vastly increasing the number of doctors that would be liable to compulsory service, it became evident that the Government must make still further use of the Professional Organization, in order to cope with the task of solving equitably and with due regard to the needs of the civil population the many difficult questions involved in the selection of the doctors to be used for the medical service of the Army, and the doctors to be left in civil practice respectively. A clause was accordingly inserted in the Bill, which is now section 7 in the Act as passed, authorizing the recognition of Professional Committees in place of the Local and other Tribunals, for deciding the cases of all qualified medical practitioners, married or single, seeking exemption (on other than conscientious grounds) from compulsory service under the Acts.

The requisite Regulations under this section have now been made and issued, and the three Professional Committees named on page 2 above (p. 142) are the Committees to be recognized thereunder. It has thus become a matter of great importance to every medical man to know and to realize thoroughly the present position in respect of the profession, generally and individually, both in relation to the Acts and also to the whole question of obtaining a sufficient supply of medical men for our Naval and Military Forces, with as little injury as possible to the medical needs of the civil population.

It is with a view to facilitating the full comprehension of the various points involved in these questions that the present official memorandum is issued; and it is hoped that the preceding historical and explanatory paragraphs may help in some measure to elucidate the present position as set out in the paragraphs here following.

THE PRESENT POSITION.

It will be found convenient for these purposes to consider the medical profession, for the time being, in three categories:

- A.—Doctors under 41* who enrol.
- B.—Doctors under 41* who do not enrol.
- C.—Doctors over 41*.

A.—THOSE UNDER 41 WHO ENROL.

(i) As explained earlier in this memorandum, every doctor under 41, single or married, enrolled or not, is, in the same manner as other citizens, under the compulsory provisions of the new Acts; but, if he is enrolled, he will, by virtue of the arrangements given in Army Council Instruction 485 (above referred to), *not be called up by the Military Authority; that is to say, the War Office refrains from applying to him its compulsory powers as to combatant service if and so long as he is enrolled and undertakes to serve, and (if required) serves, as a commissioned officer in the R.A.M.C. whenever this may be found necessary in his particular case. It is therefore important that every doctor, under 41, not yet enrolled should at once enrol himself by applying to the Central Professional Committee and signing the form which will be sent him immediately on application; this should be addressed, if he is in England or Wales, to the Central Medical War Committee, 429, Strand, W.C., and if he is in Scotland to the Scottish Medical Service Emergency Committee, c/o the Royal College of Physicians, Edinburgh.*

* NOTE.—These age limits mean, in the case of a married doctor, that he is under or over 41 on June 24th, 1916, and of a single doctor, that he was under or over 41 on March 2nd, 1916.

To remove certain misconceptions believed to be prevalent, it may be well here to repeat that an *enrolled* doctor does not have to make any application to a Local Tribunal for exemption, for the reason that the summons to compulsory service, against which alone would he have any occasion to appeal to a Local Tribunal, does not reach him. He thus has no concern with any Local Tribunal, nor any Local Tribunal with him. For an enrolled doctor is not (where it is known to the Military Authority that he is enrolled) called up by the Military Authority; and if any enrolled doctor does in fact receive a notice paper from the Military Authority calling him up for service, all he need do is to send at once to that Military Authority a certified copy of the Certificate of Enrolment that he has previously received from the Central Committee in London or in Edinburgh; and the Military Authority will then, in accordance with A.C.I. 485, cancel the notice and the practitioner will remain in reserve unless and until selected for a commission in the R.A.M.C.

(ii) Being thus in the reserve, the doctor will remember that, as explained earlier, the decision as to whether or when he is to be selected for a commission in the R.A.M.C. and taken from his civil practice to serve as a doctor with the Forces, has been delegated to the Central Professional Committees. Thus, every doctor enrolled under the Scheme will remain in the Reserve unless and until he is notified that it is proposed to select him for receiving a commission in the R.A.M.C.

If, and when he is thus selected, he will receive a notification of this fact officially from the Central Professional Committee, and on receiving this notification, if he is of opinion that his personal or professional circumstances, or any other considerations, would justify his claiming to be left in his civil practice till a later date, or even throughout the war, he must communicate, in writing, at once to the same Central Committee to that effect, when a form will be sent him on which to send full particulars of his case.

He will then receive from the Central Committee a statement of their procedure for considering his case, and of any further information which they may require from him; and in due course the Committee, after consulting the appropriate local committee,* and after hearing the doctor if he so desires, will make a final decision.

In cases where the doctor is on the staff of a hospital or medical school in the London County area, the Central Committee will hand on the doctor's application to the Committee of Reference described earlier in this memorandum, and that Committee will consider and decide the case on such evidence as they think fit, with the same kind of procedure as above, and will communicate their decision to the Central Committee, who will transmit it to the individual and to the War Office.

If it is decided that the doctor is not then to be taken, or not to be taken till some specified later date, he will be informed accordingly by the Central Committee; and in any event he will be given at least a month's notice of the date of commencing service.

If, on the other hand, he is selected, he will be offered by the War Office, on the date indicated to him by the Central Committee, a commission in the R.A.M.C. which he will accept in accordance with the obligation that he entered into when he enrolled under the Scheme. In that event his commissioned service will on that occasion be for a period not longer (unless he is willing) than twelve consecutive months, and the terms and conditions of service will be the same as those hitherto obtaining with R.A.M.C. commissions in the present war. (Information on this can be obtained at any time from the War Office.)

In this connexion, a point arises on which it is important that doctors should clearly understand the position under the new Acts. Before these Acts the doctor was able at the end of the period of his commissioned service in the R.A.M.C. to return to civil life with no further obligations. But the Military Service Acts make an important difference; for now, on his return to civil life, compulsion applies to him, and, if he does not at once enrol again, so as to obtain the conditional immunity from calling up that is then given him by Army Council Instruction 485, he will necessarily be called up for ordinary service by the Military Authorities, and will only be able to obtain exemption (if at all) from such service through the procedure described under B. below. He should, therefore, in order to avoid this, immediately enrol himself again, and thus put himself again, for the time being, outside the compulsory provisions of the Acts and come again into the position of being amongst those from whom the Central Professional Committee can select doctors for commissioned

* The Central Committee will not communicate to the local committee any information as to his personal affairs given them by the doctor which the latter has requested them to treat as confidential.

service in the R.A.M.C.; and he will be thus selected if and when the Committee thinks it is his turn to be taken again. How soon the Committee will determine it to be his turn (that is to say, how long the interval will be between the end of his first period and the beginning of his second) will be determined by the appropriate Central Professional Committee, who will take into account all the relevant considerations, *e.g.*, the needs of the Army, the needs of the civil population, the number of doctors available, the number who have served for a period, the number who have not, and so forth. Doubtless, when the Committee is making its selections of doctors month by month for the R.A.M.C., men who have not previously served at all will, wherever on a general view of the circumstances it seems possible, be taken before a doctor who has served a period; and therefore doctors may hope that it will usually be found possible to arrange that the second period of commissioned service need not be directly consecutive on the first period, but that an interval will be possible; it being clear, however, as regards doctors under 41, that, in virtue of the compulsory provisions of the Acts, their statutory liability to military service holds good, as with other citizens, for the whole period of the war.

B.—THOSE UNDER 41 WHO DO NOT ENROL.

A doctor under 41 who is not enrolled does not have any of the advantages conferred by Army Council Instruction 485 explained above, so that an unmarried doctor (not enrolled) under 41, is liable at any time since March last to be called up by the recruiting officer for ordinary combatant service under the compulsory provisions of the Acts unless excepted by an Exemption Certificate; and a married doctor (not enrolled) under 41 is similarly liable after June 24th, 1916. If, on being thus called up, he desires exemption from ordinary service he must apply to the Local Tribunal for it; his claim will (unless it is on the ground of conscientious objection) invariably be sent on by the Local Tribunal, under section 7 of the Act, to the Central Professional Committee in London or in Edinburgh, as the case may be. This Committee (or, where he is on the staff of a hospital or medical school in the London County area, the Committee of Reference to whom every such case is referred by the Central Committee) will determine whether it is, or is not, necessary that he should be allowed to remain in his civil practice, the procedure for investigation being on the same lines as above explained in respect of enrolled doctors.

If it is decided that he should so remain, whether for a time or indefinitely, the Committee will recommend exemption for such period and subject to such conditions as they deem suitable, and the Local Tribunal will give the doctor a Certificate of Exemption accordingly.

If on the other hand it is decided that it is not necessary that he should be retained, the Committee will so recommend, and the Local Tribunal will then, under section 7 of the Act, refuse him exemption accordingly. The Military Authority will then call him up for ordinary service under the compulsory powers of the Military Service Acts, and the War Office will then (unless they think him unsuited for the R.A.M.C.) offer him a commission in the R.A.M.C.

Those who, on the Committee's recommendation, obtain temporary exemption, will similarly be called up by the Military Authority at the expiration of the period fixed.

As every doctor coming under this heading B, whether refused exemption or exempted only temporarily, will have been brought in under the compulsory provisions of the Acts, and as (by not enrolling) he has not availed himself of the privileges offered under A.C.I. 485, his term of R.A.M.C. service will be for the whole period of the war and on the ordinary rates of pay, *without any of the special arrangements as to pay, or 12 months periods, or otherwise, that have been accorded to doctors who offer themselves for service in the R.A.M.C. in this war.*

C.—DOCTORS OVER 41.

Doctors are eligible up to 45 years of age for commissions in the R.A.M.C. for general service. But doctors over 41 are not within the compulsory provisions of the Acts*; they can only be obtained for the R.A.M.C. by their consent. If they have already enrolled and thus given an undertaking to accept a commission in the R.A.M.C., they have pledged themselves to no more than 12 consecutive months of service; and this will also be the case as regards any doctors outside the limits of compulsion who now or hereafter enrol under the Scheme. Many doctors over 41 may, on inquiry, be found willing to undertake an enhanced obligation, *i.e.*, to serve a second period

after such interval (if any) as the Central Professional Committee may think applicable in each particular case. But as men over 41 are under no statutory obligation to serve, the War Office has no intention of requiring this enhanced obligation to be undertaken by any of these men who volunteer to accept a commission in the R.A.M.C.; this matter will be left, in their case, wholly to the option of the individual, and the hitherto existing terms and conditions of commissioned service in the R.A.M.C. in this war will continue applicable to all doctors outside the limits of compulsion who offer themselves for these commissions.

The Army Council earnestly hope that all the doctors between 41 and 45 who have not yet enrolled will now enrol, and thus bring themselves into the list of possible candidates for commissions in the R.A.M.C. Doubtless, just as in the case of those under 41, many of them cannot be spared from their civilian medical work, or are so placed financially and otherwise that the Committee would decide that they ought not to be taken at all, or not until very late. Possibly a large proportion of them will not be required. But, on the other hand, the addition, by enrolment, of all the doctors between 41 and 45 to the number of those under 41 remaining available now that so many of the much younger men have already joined the Army, would mean an addition of nearly 40 per cent. to the field of selection, and thus obviously tend to diminish very greatly the difficulties arising both for their professional brethren under 41, for the needs of the civil population, and for the requirements of the Naval and Military Forces, in the pressing exigencies of the present war.

War Office,
7th June, 1916.

CENTRAL MEDICAL WAR COMMITTEE.

- Sir T. Clifford Allbutt, K.C.B., M.D., F.R.S., Regius Professor of Physics, University of Cambridge.
Sir James Barr, M.D., LL.D., Consulting Physician, Liverpool Royal Infirmary.
Lieut.-Col. R. A. Bolam, M.D., M.R.C.P., Hon. Phys., Royal Victoria Infirmary, Newcastle-upon-Tyne; Prof. of Med. Jurispr., University of Durham.
Charles Buttar, M.D., D.P.H., M.R.C.S., L.R.C.P. (Chairman of Executive Sub-Committee).
Major Russell Coombe, F.R.C.S., Consulting Surgeon, Devon and Exeter Hospital.
Colonel J. Galloway, M.D., F.R.C.P., F.R.C.S., Senior Physician, Charing Cross Hospital.
Sir Rickman Godlee, Bart., K.C.V.O., LL.D., M.B., M.S., F.R.C.S., Consulting Surgeon and Emeritus Prof. of Surgery, University College Hospital; late Pres. of the Royal Coll. of Surgeons of England.
Major W. J. Greer, F.R.C.S.I., Hon. Surgeon, Royal Gwent Hospital, Newport, Mon.
N. Bishop Harman, M.B., F.R.C.S., Senior Ophthalmic Surgeon, West London Hospital.
Thomas Hennessy, F.R.C.S.I., Secretary of the Irish Joint Medical War Committee.
Prof. Harvey Littlejohn, M.B., F.R.C.S., Dean of the Medical Faculty, Edinburgh University.
Major Albert Lucas, F.R.C.S., Hon. Surgeon, General Hospital, Birmingham.
J. A. Macdonald, M.D., LL.D., Hon. Physician, Taunton and Somerset Hospital; Chairman of Council, British Medical Association.
Sir Alexander Ogston, K.C.V.O., M.D., LL.D., Consulting Surgeon, Aberdeen Royal Infirmary; Emeritus Regius Professor of Surgery, University of Aberdeen; Surgeon in Ordinary to his Majesty the King in Scotland.
Sir William Osler, Bart., M.D., LL.D., F.R.C.P., F.R.S., Reg. Prof. of Med. Univ. of Oxford.
Edwin Rayner, M.D., F.R.C.S., Consulting Surgeon, Stockport Infirmary.
B. A. Richmond, M.D., M.R.C.S., L.R.C.P., Secretary of the London Panel Committee.
A. E. Shipley, F.R.S., Master of Christ's College, Cambridge.
T. W. Shore, M.D., L.R.C.P., M.R.C.S., Dean of the Medical School of St. Bartholomew's Hospital.
Frederick Taylor, M.D., F.R.C.P., Consulting Physician, Guy's Hospital, President of the Royal College of Physicians of London.
E. B. Turner, F.R.C.S., London, Chairman of Representative Meeting, British Medical Association.
T. Jenner Verrall, LL.D., L.R.C.P., M.R.C.S., Direct Representative on General Medical Council (Chairman of the Committee).
N. Bishop Harman } Secretaries, 429, Strand, W.C.
Alfred Cox, M.B. }

It is proposed to enlarge the Committee by the addition of two members having experience of provincial industrial practice.

COMMITTEE OF REFERENCE.

- Representatives of Royal College of Surgeons, England:—
Surgeon-General Sir Watson Cheyne, Bart., K.C.M.G., C.B., President of the Royal College, for whom when absent Sir Rickman J. Godlee, Bart., K.C.V.O. (ex-President of the Royal College), is deputed to act.
Lieut.-Col. William F. Haslam, F.R.C.S.
Lieut.-Col. D'Arcy Power, F.R.C.S.
Charles Ryall, F.R.C.S.
Representatives of the Royal College of Physicians, London:—
Frederick Taylor, M.D., F.R.C.P., President of the Royal College (Chairman).
Major Sidney Martin, M.D., F.R.C.P.
Lieut.-Col. W. Pasteur, M.D., F.R.C.P.
Capt. H. G. Turney, M.D., F.R.C.P., F.R.C.S.
Secretary:—F. G. Hallett, Conjoint Board.

* That is, single doctors over 41 on March 2nd, and married doctors over 41 on June 24th, 1916.

SCOTTISH MEDICAL SERVICE EMERGENCY COMMITTEE.

 Dr. Norman Walker, M.D., F.R.C.P. Edin., Convener.
 T. H. Graham, Secretary, Royal Coll. of Phys., Edin.

SCOTTISH MEDICAL SERVICE EMERGENCY COMMITTEE.

A MEETING of the General Committee was held on June 10th in the Hall of the Royal College of Physicians, Edinburgh, the following members attending: The President of the Royal College of Physicians, the President of the Royal College of Surgeons, the President of the Royal Faculty of Physicians and Surgeons of Glasgow, the Deans of the Faculties of Medicine of the Universities of St. Andrews, Glasgow, and Aberdeen, Dr. J. C. McVail, Professor Robert Muir, Professor T. K. Monro, Dr. John Adams, Dr. John Playfair, Dr. John Gordon, Dr. John Stevens, Dr. G. C. Anderson, Dr. Norman Walker (Convener). Sir Donald MacAlister, K.C.B., was also present, and Mr. T. H. Graham (Secretary).

The Convener, in reviewing the position of medical men of military age under the Military Service Acts, gave an account of the negotiations with the authorities of the War Office resulting in the establishment of Central Professional Committees for Scotland and England respectively to deal with claims by or in respect of medical men for exemption.

Sheriff James A. Fleming, K.C., Vice-Dean of the Faculty of Advocates, was appointed a member of the General Committee, and has agreed to act as legal assessor. Dr. Norman Walker was elected chairman of the Central Professional Committee for Scotland, and it was decided that five should form a quorum.

It was remitted to the Executive Committee to appoint or recognize such local professional committees as it might think necessary under the regulations. A statement was submitted showing that out of about 4,000 qualified medical practitioners in Scotland 1,617 had rendered service in one or other of the forces of the Crown since the outbreak of the war. In addition 95 applications for commissions had been recently transmitted to the War Office, making a grand total up to date of 1,712.

GENERAL COUNCIL

MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1916.

Sir DONALD MACALISTER, K.C.B., President,
in the Chair.

EDUCATION IN MEDICAL ETHICS.

THE Education Committee, to which had been added for the purpose Dr. McVail and Dr. Newsholme, presented a report in accordance with the instruction of the Council of November 4th, 1915, on the education of medical students in the ethical relationships of medical practitioners to the State, to their patients, and to each other. The report stated that a letter addressed to all the teaching bodies had elicited the information that in most cases the subject was dealt with as part of the regular work in the courses of forensic medicine and public health, to some extent also in other classes, and occasionally in special lectures. In a number of instances, however, no regular instruction had hitherto been given. The Committee expressed the

opinion that it was advisable that the subject should not be neglected in the education of the medical student, but recognized that the special arrangements adopted for conveying the instruction may naturally vary among the different bodies. The report concluded by advising that a general recommendation dealing with the teaching of medical ethics should be added to the "Resolutions of the General Medical Council in regard to professional education" as adopted on June 6th, 1912. Such a general recommendation was adopted by the Council in the following terms:

Instruction should be given, in the courses of forensic medicine and public health, or otherwise, on the duties which devolve upon practitioners in their relationship to the State, and upon the generally recognized rules of medical ethics. Attention should be called to all notices on these subjects issued by the General Medical Council.

Dr. McVAIL said that he felt sure that the recommendation would be of benefit to students in enabling them to avoid pitfalls, and particularly those with regard to the Midwives Act.

REPORT BY THE EXAMINATION COMMITTEE.

Apothecaries' Hall of Ireland.

The report of the Examination Committee contained the following recommendation:

1. That, inasmuch as the Court of Directors of the Apothecaries' Hall of Dublin have expressed their utmost willingness to comply in every respect with the requirements of the General Medical Council in regard to the Course of Study and the Examinations at Apothecaries' Hall, it be referred to the Examination and Education Committees, acting conjointly, to prepare for the Executive Committee a statement of the respects in which the said Course of Study and the said Examinations have been found to be defective or insufficient; and of the suggestions they desire to make for amendment in these respects. That, further, it be delegated to the Executive Committee to communicate to the Court or the Hall the statement so prepared on behalf of the Council.

At a meeting of the Executive Committee on May 25th it was resolved to forward a copy of the suggestions to the authorities of the Apothecaries' Hall, Dublin, with the request that the suggestions should receive the serious attention of those authorities.

Indian Subordinate Medical Department.

The Examination Committee reported that it had learnt from the India Office that the course of professional study for the Indian Subordinate Medical Department would be extended in the future from four to five years, and that prior to its commencement candidates would be required to pass a preliminary examination recognized by the General Medical Council. On November 16th, 1915, the India Office had forwarded for the information of the Council a proof copy of the revised prospectus relating to the military assistant surgeon branch of the Indian Subordinate Medical Department, but on April 24th, 1916, it had intimated that in consequence of certain difficulties which had arisen it had been decided to defer for another year the introduction of the scheme for improving the education and training of military assistant surgeons. In these circumstances the Committee did not offer any observations on the revised prospectus.

PHARMACOPOEIA COMMITTEE.

The British Pharmacopoeia, 1914.—The report presented by the Pharmacopoeia Committee stated that the number of copies of the *British Pharmacopoeia* sold between November 1st, 1915, and May 20th, 1916, was 960, making a total of 25,400 copies since January 1st, 1915, and that of the second issue of 10,000 copies, 3,200 remained in stock. It was also reported that there was a misprint in the eighth line from the foot of page 29, under the heading "*Adeps Lanae*," the words "0.2 gramme" should read "2.0 grammes," and that the misprint would be corrected in the next impression.

Laudanum.—The report also stated that the Committee's recommendations having been approved by the Council (SUPPLEMENT, November 13th, 1915, p. 186), a communication was addressed to the Lord President suggesting that in the public interest, all preparations or mixtures containing 0.75 or more per cent. of morphine should be included in Part I of the schedule of the Pharmacy Act. The suggestion was conveyed by the Lord President to the Council of the Pharmaceutical Society of Great Britain, who in virtue of its powers under the Pharmacy Acts submitted a resolution in favour of the suggested amendment of the schedule for the approval of the Privy Council. An

Order on the Council was thereupon issued on February 9th, 1916 (BRITISH MEDICAL JOURNAL, February 19th, p. 236), which enacts the amendment in the manner prescribed by law. The result, the report pointed out, was that all tinctures of opium, whether described as "*Laudanum B.P. 1893*" or otherwise, which contain three-fourths of 1 per cent. of morphine, must now be sold to the public only under the more stringent conditions attached to the sale of the poisons in the first part of the schedule.

FINANCE.

The report of the Finance Committee was entered on the minutes and approved on the motion of the Treasurers, Mr. TOMES and Sir HENRY MORRIS. It stated that the income of the General and Branch Councils for the year ending December 31st, 1915, was £10,040, and the expenditure £6,471, leaving a surplus of £3,569. The income of the General Council, £2,067, was £945 more than in 1914, owing to the abnormal number of colonial and foreign registrations. Numerous colonial practitioners had come over to help in the naval and military forces, and many Belgian doctors were enabled to maintain themselves by practising and to take the place of British practitioners who have gone to the front. The income of the English Branch showed a decrease of £640, and the Scottish of £326, but the Irish Branch had a small increase, £36. As many senior students had been recalled from the colours to complete their studies, the British registrations should not show a large decrease at present, and colonial and foreign registrations might continue at a high figure, but probably there were lean years ahead, and the Council's finances would need careful watching if they were to continue satisfactory. The number of students registered was 1,918, as against 1,600 in 1914, and 1,480 in 1913; out of the 1,918 between 400 and 500 were women. This was considered to be satisfactory, as giving ground for the expectation that in due course the wastage of the war was likely to be made up. The expenditure of the General Council showed a decrease of £1,184; the sessions, owing to their brevity, had cost £321 less, and the printing of the *Register* £342 less, as under the new contract there was a greater saving when fresh entries were fewer. The fact that no circulars were issued for the correction of the *Register* accounted for a saving of £263. The cost of reporting on the Apothecaries' Hall examinations was £121 less, and £431 less was paid for interest on mortgage and loan. General printing had cost £60 more, owing to increased prices during the war; £192 more was paid for rent, and house expenses were £62 higher. In building its new premises the Council had been much handicapped by having to do the work at a largely increased cost during the war, but it was hoped that the annual expenditure would not be much, if at all, increased by the change, which had greatly contributed to the comfort and convenience of the members, the staff, and the public. The conversion of consols held by the English and Scottish Branches into 4½ per cent. war loan at the end of 1915 showed an apparent loss of capital, owing to the price at which consols had been valued or bought. Though the surplus in 1915 was £3,569, as compared with £2,299 in 1914, the prospect of a probable decrease in fees for some years to come and the cost of elections of direct representatives which were only postponed, led the Committee to utter a word of warning against undue optimism. The Dental Fund showed a surplus of £671 of receipts over expenditure, almost exactly the same amount as in 1914. The expenditure was £196 more, principally because a proportion of office expenses more in accordance with the work involved was charged to the fund. The sum of £1,391 had been written off the value of consols on conversion, but after deduction of the surplus the net decrease in assets was £720.

DISCIPLINARY CASES.

Charge of Adultery.

The case of James Andrew Baird Thompson, registered as of 37, Bolina Road, South Bermondsey, London, S.E., M.B., C.M. 1877, M.D. 1879, U.Glasg., was considered on May 25th and 26th. He had been summoned to appear before the Council on the following charge:

That being a registered medical practitioner you abused your position by committing adultery with a Mrs. Grigson, whom and whose husband and child you had attended professionally, which adultery you were found to have committed by the

verdict of a jury given at the trial of the case of Grigson v. Grigson and Thompson in the Probate, Divorce, and Admiralty Division (Divorce) of the High Court of Justice, on October 20th, 1915, and in which the decree was made absolute on May 8th, 1916. And that in relation thereto you have been guilty of infamous conduct in a professional respect.

Mr. HARPER supported the charge. Dr. Thompson appeared in person.

Mr. HARPER said he understood that Dr. Thompson admitted the adultery, but denied that at the time the relation of doctor and patient existed between him and Mr. and Mrs. Grigson or any member of the household.

Dr. THOMPSON said that that was so. The relationship did not exist at the dates mentioned in the charge.

Mr. HARPER put in the decree nisi and the decree absolute and the shorthand writer's notes of the evidence in the divorce proceedings which had been verified by statutory declaration.

Dr. THOMPSON called Mrs. Grigson, who denied that at the time the acts of intimacy occurred professional relations existed. Dr. Thompson, giving evidence on his own behalf, confirmed Mrs. Grigson's evidence. He did not defend the divorce proceedings under advice, although he contended he had a good defence. His object in not doing so was as much as possible to avoid publicity. Dr. Thompson addressed the Council on his own behalf, and said that he had endeavoured to show beyond doubt that the professional relationship of medical man and patient did not exist between himself and Mr. Grigson and his family at the time of the misconduct. He also put in certain letters and testimonials.

The COUNCIL'S SOLICITOR briefly replied, and after the Council had deliberated on the case *in camera* the PRESIDENT announced the judgement of the Council as follows:

Dr. Thompson, I have to inform you that the Council has judged you to have been guilty of infamous conduct in a professional respect and have directed the Registrar to erase your name from the *Medical Register*.

Convictions for Misdemeanour.

The Council on May 24th considered the case of Kenneth Ram Gujral Shaw, registered as care of Thomas Cook and Son, Ludgate Circus, E.C., M.B.Ch.B. 1912, U.Edin., who had been summoned to appear before the Council on the following charge:

That being a registered medical practitioner you were convicted of the following misdemeanour, namely:

1. On September 17th, 1915, at the Thames Police Court, of being drunk and disorderly, in respect of which offence you were bound over in the sum of 60s. to be of good behaviour for six months.

2. On September 21st, 1915, at the County of London Sessions, of exposing your person, in respect of which offence you were on October 12th, 1915, bound over in the sum of £5 to appear for judgement if called upon within twelve months.

Mr. HARPER put in certified copies of the convictions, and also reports by the police, which had been forwarded to the Council by the authorities at Scotland Yard. The notice of inquiry had been posted by registered letter to his registered address, and Messrs. Thomas Cook and Son, Ludgate Circus, had informed him (Mr. Harper) that the same had been forwarded on instructions to "Mr. Shaw, M.E.F., Egypt." Inquiry had been made of the Director-General, Army Medical Service, and also of the Admiralty, but in each case no record could be found of any commission having been granted to Kenneth Ram Gujral Shaw. In case he should have accepted a post as ship's surgeon inquiry had been made of various steamship lines, with a like result. Mr. Harper then called evidence to identify Mr. Shaw as the person named in the certificates of convictions.

Strangers and the parties were directed to withdraw. On readmission, the PRESIDENT announced the judgement of the Council as follows:

I have to announce that Mr. Kenneth Ram Gujral Shaw, having been proved to have been convicted of the misdemeanours alleged against him in the notice of inquiry, the Acting Registrar has been directed to erase his name from the *Medical Register*.

The Council being satisfied that Henry William West, registered as of 352, Vernon Road, Old Basford, Notts, M.R.C.S.Eng. 1892, L.R.C.P.Lond. 1892, had been convicted at the City of Nottingham Assizes on November 1st, 1915, of feloniously killing and slaying a woman and sentenced to seven years' penal servitude, directed his name to be removed from the *Medical Register*.

The Council being satisfied that John Thomas Dickie, registered as of 37, Lauriston Place, Edinburgh, L.R.C.P. and S. Edin. 1881, had been convicted in the High Court of Justiciary on two separate charges of culpable homicide by using instruments in the bodies of two pregnant women and causing them to abort, and had been sentenced to five years' penal servitude, directed his name to be erased from the *Medical Register*.

On May 26th the Council considered the case of William Joseph Ryan, registered as c/o the British Medical Association, 429, Strand, W.C., L.R.C.P. and S. Edin. and L.F.P.S. Glasg. 1888. The charge was that on several occasions he had been convicted of being drunk and disorderly or drunk and incapable. Mr. HARPER proved the service of the notice of inquiry by registered post, and said that he communicated with the Financial Secretary and Business Manager of the British Medical Association, who had informed him that Dr. Ryan had used the address of the Association without authority, and that a registered letter for Dr. Ryan was still lying at the office of the Association. Mr. Harper put in certificates of conviction and proofs of identity of Dr. Ryan as the individual named therein, and also read correspondence from Dr. Ryan, in which he offered various excuses for his condition. The Council directed Dr. Ryan's name to be erased from the *Medical Register*.

DENTAL DISCIPLINARY CASE.

The Council considered on May 26th the report of the Dental Committee on the case of William Bonallo, whose address in the *Dentists' Register* for the current year was Cramlington Hall, Cramlington, Northumberland. The Committee stated that it had evidence that on November 2nd, 1915, the said William Bonallo was convicted at the Northumberland Assizes of feloniously using a certain instrument with intent to procure miscarriage, and was sentenced to three years' penal servitude. The Council directed his name to be erased from the *Dentists' Register*.

RESTORATION TO REGISTER.

The PRESIDENT announced on May 25th that the Acting Registrar had been directed to restore the name of Casper Denis Dowling to the *Medical Register*.

CONSTITUTION OF COMMITTEES.

The nominations to the following Committees were approved:

Examination Committee.—Dr. Taylor, Dr. Saundby, Dr. Caton (from English Branch Council), Dr. Russell, Dr. Knox, Dr. Norman Walker (Scottish Branch Council), Sir John Moore, Sir Arthur Chance, Dr. Kidd (Irish Branch Council).

Education Committee.—Dr. Norman Moore, Sir G. Philipson, Sir Francis Champneys (English Branch Council), Dr. Mackay, Mr. Hodsdon, Dr. Knox (Scottish Branch Council), Sir Arthur Chance, Sir Bertram Windle, Dr. Little (Irish Branch Council).

Public Health Committee.—Dr. Newsholme, Dr. Latimer, Mr. Verrall (English Branch Council), Mr. Littlejohn, Dr. Cash, Dr. McVail (Scottish Branch Council), Sir John Moore, Dr. Magennis, Dr. Kidd (Irish Branch Council).

British Medical Association.

CURRENT NOTES.

LOCAL CONFERENCES TO INAUGURATE SCHEMES FOR DIAGNOSIS AND TREATMENT OF VENEREAL DISEASES.

At a joint meeting of the Medico-Political, Public Health, and Hospitals Committees of the Association, held on June 8th, attention was drawn to the fact that it is the intention of the National Council for Combating Venereal Diseases to hold in all counties and county boroughs under the auspices of the county authorities or mayor a series of conferences to discuss the inauguration of local schemes for dealing with the diagnosis and treatment of venereal diseases. Some of these conferences have already been held and others are in contemplation. The joint meeting of the Committees considered that it was of the utmost importance that at all such conferences the local medical profession should be well represented. It is hoped, therefore, that chairmen and secretaries of Divisions and Branches of the Association will be on the look-out for the calling of the conferences and will take steps to call the local profession together beforehand in order to secure a good attendance of representatives of the profession and united action on the part of those who attend. The Council of the Association will

very shortly issue a detailed report on the recommendations of the Royal Commission on Venereal Diseases, one of the main points in which will be the insistence on the necessity for adequate representation of the medical profession on all committees set up to deal with local schemes.

Association Notices.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, June 28th, in the Council Room, 429, Strand, London, W.C., at 11 a.m.—By order,

GUY ELLISTON,

June 1st, 1916.

Financial Secretary and Business Manager.

GRANTS IN AID OF SCIENTIFIC RESEARCH.

The Council of the British Medical Association is prepared to receive applications for grants in aid of Research into the Causation, Treatment, or Prevention of Disease. Preference will be given to medical practitioners and to applicants who propose to investigate problems directly related to practical medicine.

Applications for grants must be received not later than June 17th, 1916, and must be made on the prescribed form which, together with the Regulations governing such grants, can be obtained on application to the Medical Secretary of the Association, 429, Strand, London, W.C.

[Owing to pressure on our space, it has been necessary to postpone the publication of a number of meetings of Branches and Divisions, and also matter relating to Insurance.]

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH.—Dr. William H. Wynn, Honorary Secretary, gives notice that the annual meeting of the Birmingham Branch will be held on Thursday, June 22nd, at 3.30 p.m. Business: Annual reports; election of officers. The President for the ensuing session, Dr. W. R. Jordan, will deliver his inaugural address.

EAST ANGLIAN BRANCH.—Dr. B. H. Nicholson (East Lodge, Colchester) gives notice that the annual meeting of the East Anglian Branch will be held in the Crown and Anchor Hotel, Ipswich, on Thursday, June 22nd, at 4 p.m., for the transaction of business.

EDINBURGH BRANCH.—Drs. John Stevens and John Eason, Honorary Secretaries (78, Polwarth Terrace, Edinburgh), give notice that the annual meeting of the Edinburgh Branch will be held in the Hall of the Royal College of Surgeons, Nicolson Street, on Wednesday, June 21st, at 4 p.m. Tea will be served from 3.40 to 4 o'clock. Business: Report of Branch Council. Treasurer's financial statement. Election of office-bearers. Report of election of Dr. John Stevens as member of the Council of the Association for 1916-17 for the Edinburgh and Fife Branches. Election to annual vacancy on the Board of Management of the Queen Mary Nursing Home; Branch Council nominate Dr. Lamond Lackie. Report of Proceedings of Scottish Committee. The work of the Scottish Medical Service Emergency Committee, etc. Annual Report of Council and Provisional Agenda for Annual Representative Meeting (SUPPLEMENT, May 6th); reduction of fees for notification of infectious diseases from 2s. 6d. to 1s. Any other competent business.

METROPOLITAN COUNTIES BRANCH: EAST AND WEST HERTFORDSHIRE DIVISIONS.—Dr. H. D. Ledward and Dr. C. Herbert Hall, Honorary Secretaries respectively of the East and West Hertfordshire Divisions, give notice that the annual meetings of the Divisions will be held jointly at 3 p.m. on Wednesday, June 21st, at the offices of the Association, 429, Strand, W.C. Business: To receive the annual reports, elect officers, and consider the agenda of the Annual Representative Meeting.

SOUTH-WESTERN BRANCH.—Mr. Russell Coombe, Honorary Secretary, gives notice that the seventy-seventh annual meeting will be held on Wednesday, June 21st, at the rooms of the Plymouth Medical Society, at 4.15 p.m., when Major Woolcombe will resign the chair to Mr. Ackland. The report of the Branch Council for 1915-16 and the financial statement for the year 1915 will be presented, and the officers of the Branch will be elected for 1916-17. In view of the continuance of the war the meeting will be restricted to the purely formal and necessary business.

STAFFORDSHIRE BRANCH.—Dr. Harold Hartley, Honorary General Secretary (Bosford, Stoke-on-Trent), gives notice that the forty-third annual meeting of the Branch will be held at the Victoria Hotel, Wolverhampton, on Thursday, June 22nd, at 5.25 p.m., when an address will be delivered by the new President, Dr. Henry Malet. The report of the Council and the financial statement will be presented and officers for the ensuing year elected. An alteration in Rule 7 of the Agreement of Affiliation of the Staffordshire County Nursing Association during the continuance of the war will be proposed. Members have the privilege of introducing friends. Dinner at 7 p.m.; charge 5s.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—Dr. S. C. Legge gives notice that the annual meeting of the Worcester Division will be held at 2 p.m., and the annual meeting of the Worcestershire and Herefordshire Branch at the Salter's Hall, Droitwich, on Friday, June 30th, at 3 p.m., when the President, Dr. Wilkinson, will deliver an address on The Brine Baths of Droitwich.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Surgeons-General D. T. Hoskey, M.B., to the *Pembroke*, additional, for Chatham Hospital; G. Welch to the *Victory*, additional, for Haslar Hospital. Fleet Surgeons J. D. Hughes to the *Temeraire*, H. Clift to Marine Barracks, Chatham; F. Bolster to the *Pembroke*. Staff Surgeons T. W. Jeffery to the *Pyramus*, vice Phipps; E. R. Townsend to the *Fulcan*, vice Jeffery; P. T. Nicholls and E. Thompson to the *Victory*. Temporary Surgeons F. L. Cassidy, M.B., to the *Leander*, vice Kilbride; G. W. Carte, M.B., to the *Vivid*, E. R. Bailey to the *Vengeance*, H. Danvers to the *Attentive*, E. L. Sturdee to the *Lion*, vice Moon; H. L. Ollerhead, W. F. R. Castle to Haslar Hospital; P. G. Gibson to Plymouth Hospital, G. S. Mitchell to Chatham Hospital, H. Clough to the *Pembroke*.

ARMY MEDICAL SERVICE.

LIEUTENANT-COLONEL A. L. A. WEBB, C.M.G., to be Deputy Assistant Director-General vice Lieutenant-Colonel H. P. W. Barrow.

ROYAL ARMY MEDICAL CORPS.

Temporary Lieutenants to be temporary Captains: T. M. Horsfall, M.B., F. M. Kirwan, J. H. Robertson, M.B., L. F. E. Jeffcoat, M.B., D. Kelly, H. Webb, R. J. Bruce, M.B., W. S. Pickup, M.B., K. M. B. Simon, M.B., D. A. Hutcheson, M.D., H. Bates, M.D., F. E. McGee, E. I. P. Pellett, W. H. McKinstry, M.B., W. E. L. Fowler, E. R. Welsh, M.B., H. S. Millar, M.D., T. L. Kenion, W. M. Thunder, M.B., G. R. C. Wilson, B. Beamish, T. MacKinlay, M.B., W. H. Hardy, M.B., C. G. Gibson, N. G. Meade, B. S. Taylor, R. T. Herdman, M.D., A. D. Forbes, M.B., J. E. M. Wigley, M.B., J. Macqueen, M.B., H. B. Elton, M.B., J. D. Wilkinson, S. Cross, M.B., B. Cuppage, M.B., A. J. Davoren, M.B., H. Blundell, M.D., A. Cameron, M.B., R. Donald, M.D., F. W. Fawcett, M.B., A. U. Millar, M.B., A. B. McPherson, M.B., A. R. Moore, W. Oliver, M.B., V. J. Rutledge, M.B., T. Readman, H. D. Smart, M.D., H. K. Wallace, M.D., J. J. K. Pentony, M.B., J. N. Martin, A. Farquhar, M.B., G. Haggood, G. H. Thompson, B. M. Hunter, M.B., A. H. Thomas, M.B., I. H. S. Hawes, M.B., W. A. Wheeldon, M.B., A. Whitby, G. W. Stanley, T. H. Fowler, A. J. Dempsey, M.B., T. Bennett, C. L. Lakin, M.D., R. Grant, M.B., G. W. B. Waters, J. R. Burn, M.B., B. N. Norman, S. H. Booth, M.D., J. J. Foley, W. J. Jameson, M.D., J. E. Forster, M.D., P. L. Watkin, Williams, F.R.C.S., J. C. Osborne, M.B., H. B. Wilson, E. J. Tyrrell, M.B., J. D. Benjafield, M.D., R. Power, M.B., A. E. Henton, W. R. Honeyburne, M.D., W. J. G. Henderson, M.B., W. Cooper, J. F. West, G. Clarke, M.D., J. M. Coates, M.D., C. W. Wilson, M. J. Gallagher, M.B., S. Batchelor, R. Hamilton, M.D., H. W. Binks, M.B., G. J. Fraser, M.B., H. S. Groves, L. R. Lemprière, M.B., R. McLean, M.B., G. McNeil, M.B., F.R.C.S.E., A. Verling, M.B., A. S. Wilson, M.B., W. F. Rhodes, F. E. Chapman, M.B., G. Hamilton, M. Macnicol, M.D., P. Templeton, E. R. Lyth, M.B., F. M. Harvey, T. B. Evans, M.B., F. R. Brown, M.B., A. McL. Cato, E. G. Goldie, M.D., J. M. D. Mitchell, M.D., G. P. Taylor, M.B., J. C. Mitchell, J. Low, M.B., E. B. Collings, J. Anderson, M.B., E. S. White, T. T. Apsimon, M.B., H. G. Davison, M.D., J. Clark, M.B., T. Kirkwood, M.B., A. E. Thompson, M.D., A. B. Northcote, M.D., H. R. Hurry, F. W. W. Griffin, M.D., A. N. Clemenger, D. C. Evans, E. R. Scott, M.B., L. W. Shelly, I. Allan, J. L. Williams, M.D., F. E. Reynolds, C. B. Heald, M.D., J. Cunningham, M.B., L. G. McCune, M.B., B. G. Klein, M.D., W. T. Buchan, M.B., E. Coleman, M.B., J. Proctor, M.B., D. C. Welsh, M.B., W. L. VACANCIES.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

BRADFORD CITY.—Two temporary Women Medical Officers. Salary, £8 8s. per week.
BURY INFIRMARY.—Junior House-Surgeon. Salary, £150 per annum.
DERBYSHIRE ROYAL INFIRMARY.—House-Surgeon. Salary, £200 per annum.
DEVON COUNTY EDUCATION COMMITTEE, Exeter.—Temporary Oculist. Salary, £8 8s. a week.
DUBLIN UNIVERSITY.—Chair of Surgery.

DUDLEY: GUEST HOSPITAL.—Senior Resident Medical Officer. Salary, £150 per annum.
GREAT YARMOUTH HOSPITAL.—House-Surgeon. Salary, £200 per annum.
LEEDS HOSPITAL FOR INFECTIOUS DISEASES AND TUBERCULOSIS.—Assistant Medical Officers. Salary, £250 per annum.
LONDON COUNTY COUNCIL.—Assistant Organizers of Children's Care Work. Salary, £100 per annum, increasing to £150.
LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—Assistant Resident Medical Officer. Honorarium, £120 per annum.
MANCHESTER CHILDREN'S HOSPITAL.—Locumtenant Lady Resident Medical Officer.
MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Lady House-Surgeon. Salary, £120 per annum.
MIDDLETON-IN-WHARFDALE SANATORIUM, near Ilkley.—Lady Assistant Medical Officer. Salary, £300 per annum.
NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—(1) Two House-Surgeons. (2) House-Physician. Salary, £50 per annum.
PLYMOUTH: SOUTH DEVON AND EAST CORNWALL HOSPITAL.—House-Physician. Salary, £150 per annum.
SHEFFIELD ROYAL INFIRMARY.—House-Physician. Salary, £120 per annum.
SOUTH LONDON HOSPITAL FOR WOMEN.—Pathologist (female). Salary, £250 per annum.
STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—House-Surgeon. Salary, £200 per annum.
SUNDERLAND: ROYAL INFIRMARY.—Lady House-Surgeon. Salary, £150 per annum.
WIGAN: ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY.—Senior House-Surgeon. Salary, £250 per annum.
To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., which sum should be forwarded with the notice not later than the first post on Wednesday morning in order to ensure insertion in the current issue.

BIRTHS.

KEMP.—June 13th, at Brook House, Carbrook, Sheffield, the wife of Jas. Kemp, M.B., Ch.B., of a son.
WRAITH.—On June 11th, 1916, at Gwynant, Hampton Park, Hereford, the wife of Oswald S. Wraith, M.D., F.R.C.S.E. (late temporary Lieutenant, R.A.M.C.), of a son.

MARRIAGES.

WILLIAMSON—MARSDEN.—On the 8th inst., quietly, at Zion Church, Morecambe, James Williamson, M.B., of Bury, to Lois, daughter of J. W. Marsden, Esq., of Baco, Morecambe.

DEATHS.

BARNES.—On June 9th, at Down Hall, Wembdon, Bridgwater, George Barnes, late of Axminster, aged 81 years. R.I.P.
CATHCART.—Killed in action, on June 4th, Second Lieutenant Francis John Cathcart, R.F.A., aged 21, only son of Charles W. Cathcart, F.R.C.S., Edinburgh.

DIARY FOR THE WEEK.

FRIDAY.

WEST LONDON MEDICO-CHIRURGICAL SOCIETY. West London Hospital, Hammersmith W., 8.15 p.m.—Cavendish Lecture by Sir John Bland-Sutton: The Fate of Patients who have had Stones Removed from the Kidneys.

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
JUNE.	
16 Fri.	London: Executive Subcommittee of Central Medical War Committee, 2.45 p.m. Newcastle-on-Tyne Division, Annual Meeting, 23, Ridley Place, 8.30 p.m.
21 Wed.	London: Finance Committee, 2 p.m. East and West Hertfordshire Divisions, Joint Annual Meeting, 423, Strand, W.C. Edinburgh Branch, Annual Meeting, Royal College of Surgeons, Nicolson Street, 4 p.m. South-Western Branch, Annual Meeting, Plymouth, 4.15 p.m.
22 Thur.	Birmingham Branch, Annual Meeting, 3.30 p.m. East Anglian Branch, Annual Meeting, Ipswich, 4 p.m. Staffordshire Branch, Annual Meeting, Wolverhampton, 5.25 p.m.; Dinner, 7 p.m.
23 Fri.	London: Executive Subcommittee of Central Medical War Committee, 2.45 p.m.
27 Tues.	London: Metropolitan Counties Branch, Annual Meeting, 4 p.m. West Somerset Branch, Annual Meeting, Taunton, 3.30 p.m.
28 Wed.	London: Council Meeting, 11 a.m.
29 Thur.	East York Division, Lloyd Hospital, Bridlington, 12.30 p.m.
30 Fri.	London: Executive Subcommittee of Central Medical War Committee, 2.45 p.m. Worcestershire and Herefordshire Branch, Annual Meeting, Droitwich, 3 p.m.; Worcester Division, Annual Meeting, 2 p.m.
JULY.	
5 Wed.	Sussex Branch, Annual Meeting, Eastbourne, 2.30 p.m.
6 Thur.	Midland Branch, Annual Meeting, Derby, 3 p.m.
12 Wed.	Southern Branch, Annual Meeting, Winchester, 2.30 p.m.
19 Wed.	Dorset and West Hants Branch, Summer Meeting, Weymouth, 3 p.m.
28 Fri.	ANNUAL REPRESENTATIVE MEETING, Connaught Rooms, Great Queen Street, London, W.C., and following days as may be required.

RECRUITING FOR THE NAVAL AND MILITARY MEDICAL SERVICES.

CENTRAL PROFESSIONAL COMMITTEES.

As announced last week, the Central Medical War Committee for England and Wales and the Scottish Medical Service Emergency Committee have been recognized by the Army Council as the Central Professional Committees for England and Wales and Scotland respectively, under the regulations made by the Order in Council in compliance with the provisions of the Military Service Act, 1916 (Session 2). The Reference Committee appointed by the Royal College of Physicians of London and the Royal College of Surgeons of England has also been approved by the Army Council under paragraph 5 (1) of the regulations.

The constitution of the Central Medical War Committee and the Committee of Reference of the Royal Colleges in England and the Scottish Medical Service Emergency Committee were set out in the SUPPLEMENT to the JOURNAL of last week, p. 144, as an appendix to the War Office memorandum. As Colonel Galloway is now serving abroad with His Majesty's forces he cannot be an effective member of the Central Medical War Committee, and his place must therefore be filled up. The Army Council requires that two other members with experience in provincial and industrial practice shall be placed on the Committee, one of them being a practitioner in Wales. There are thus three vacancies to be filled up. The Army Council has also requested the Committee to forward a scheme for the appointment or recognition of local professional committees, and a note as to their character and procedure, in order that it may be considered by the Army Council with a view to the requisite approval under Section 1 (3) of the regulations. The regulations were published in the SUPPLEMENT to the JOURNAL of June 10th.

The Military Service Acts do not apply to Ireland, but members of the profession in Ireland are invited to volunteer for commissions R.A.M.C. They should communicate, in the first place, with the secretaries of the Irish Medical War Committee, 16, South Frederick Street, Dublin.

COMMISSIONS FOR MEDICAL MEN BETWEEN 45 AND 55.

We are informed that medical men between 45 and 55 are urgently and immediately needed to take whole-time commissions in the R.A.M.C. for service at home. As announced last week, the War Office has resolved to make this offer in order to liberate for service abroad officers R.A.M.C. of military age now serving at home. Application may be addressed direct to the Secretary, War Office, London, S.W., or through the secretaries of the Central Medical War Committee (England and Wales), 49, Strand, W.C.; the Secretary of the Scottish Medical Service Emergency Committee, Royal College of Physicians, Edinburgh; or the secretaries of the Irish Medical War Committee, 16, South Frederick Street, Dublin.

IRISH MEDICAL WAR COMMITTEE.

A meeting of the Irish Medical War Committee was held on May 30th at the Royal College of Physicians, Dublin, when Mr. WILLIAM TAYLOR, President of the Royal College of Surgeons, was in the chair, and the following members were present: Dr. E. Coey Bigger (Local Government Board), Dr. D. J. Coffey (University College), Mr. F. Conway Dwyer (Royal College of Surgeons), Professor A. Dixon (Trinity College), Colonel Hearn, R.A.M.C., Dr. W. J. Maguire (Insurance Commission), Dr. R. J. Rowlette, with Dr. M. R. J. Hayes, Secretary, and Dr. T. Hennessy, Assistant Secretary. A large amount of correspondence was dealt with.

SOUTHAMPTON.

The following resolution was adopted at a joint meeting of the Southampton Medical War Committee and the medical men in the area:

That this meeting considers that, judging by the position in Southampton, no more doctors can be spared unless the Government grants statutory powers to the local medical war committees to mobilize the whole profession in each area to organize the work.

MARYLEBONE.

A meeting of the registered medical practitioners of St. Marylebone will be held at the house of the Royal Society of Medicine on Monday next at 9 p.m. for the purpose of electing a local professional committee representing all the practitioners of the borough under the provisions of the Military Service Act, 1916 (Session 2), and the regulations made thereunder. Nominations should be sent to the chairman, Mr. Charles Ryall, 62, Harley Street, W.

Meetings of Branches and Divisions.

LEINSTER BRANCH.

THE annual meeting of the Leinster Branch was held at the Irish Offices, 16, South Frederick Street, Dublin, on May 15th, when Sir WILLIAM THOMPSON was in the chair. Dr. R. L. HEARD was installed as President for 1916 and 1917.

Election of Officers.—The following officers were elected:

President-elect: Dr. J. M. Day.
Vice-Presidents: Dr. H. Jellett and Mr. A. Blayney.
Secretary and Treasurer: Mr. W. Doolin.
Representative to Annual Meeting: Mr. W. Doolin.
Representatives on Irish Committee: Dr. J. Craig and Dr. J. B. Kenny.

Rules.—The revised ethical rules and the revised organization rules were adopted.

President's Address.—Dr. R. L. HEARD, after expressing his thanks for the honour done him by his election as President, made appropriate reference to the death of Dr. Arthur White, late honorary secretary, a man of kindly nature and one who for a number of years took much interest in medical politics. Dr. Heard then passed to the subject of his address—Some aspects of general practice. "If," he said, "we have eyes to see and ears to hear, and

if we take, as we ought to do, an intense intelligent interest in our work, we often have the privilege of seeing disease and individual cases of illness in the incipient and early stages, even from the time the patient perhaps merely complains but of an indefinite feeling of illness, and we must hold our hand in doubt as to what is exactly presented to us to deal with—a period when by timely care and nursing such may at times be nipped in the bud and much suffering, loss of health, even death itself, be thereby averted." The work of a general practitioner had a very definite charm of its own; it had its very real disadvantages—work not so well remunerated, greater uncertainty of time, increased liability to disturbance, especially at night, no freedom on Sundays, and greater difficulty in arranging for holidays, were some of the more obvious drawbacks. On the other hand, the general practitioner made many real friends. It was certainly good to be the trusted guardians of many a family history; good to be consulted not only upon professional matters but also on subjects unconnected therewith. To be looked upon not merely as a doctor but as a trusted friend was indeed a reward. Asepsis with its wonderful possibilities and triumphs in the realm of surgery rendered it the more incumbent on all practitioners to keep themselves abreast with knowledge, so as to be in a position to advise their patients upon the many new procedures and operations from time to time devised for the relief of conditions that aforesaid could only be treated, and that not always satisfactorily, by medicinal and mechanical means—conditions of which enteroptosis, pyloric and other strictures, intestinal stasis, abdominal adhesions, hepatic cirrhosis, and that intensely distressing ailment, pruritus ani, might serve as samples. Asepsis had robbed midwifery of its chief anxiety for the doctor, whilst making possible successful interference, by way of Caesarean section, in cases of contracted pelvis and placenta praevia—cases which otherwise would almost certainly have been attended by the death of the child and by suffering and possibly death to the mother. Asepsis had also rendered it possible to treat radically and with practical impunity those too frequent cases of appendicitis which in former years were dealt with by expectant methods only. It was almost impossible for one engaged in busy practice to do much in the way of bacteriological work, blood counts, elaborate chemical analysis, and like procedures; but the more conversant the general practitioner was with these matters and the more he understood their bearing on his everyday work the better would he be able to appreciate the valuable assistance the specialist could so often afford him, not only in diagnosis, but also in treatment. The x rays would often correct mistakes and assist efforts to collaborate with Nature in the healing of the sufferer. It was, however, not infrequently extremely difficult, no matter how much the doctor might so desire it and how near the patient might be to such assistance, to get the latter to consent, on the ground of expense, to the use of various means of diagnosis and treatment; nevertheless, Dr. Heard considered that in any doubtful or difficult case such help should be urged upon the patient, and the responsibility thrown upon him or her of deciding for or against. It was even sometimes desirable to defray the cost out of one's own pocket rather than risk the loss of reputation which might so readily ensue. In this connexion he urged the advantage of belonging to one or another of the different associations in existence for medical defence. "As regards our relations with our professional brothers," Dr. Heard continued, "we must all face the facts that patients have a perfect right to change their medical attendant as often as it may please them to do so. The reasons that induce patients thus to act are frequently trivial and may seem to us absolutely unreasonable, but nevertheless we must put up with it with as good a grace as possible, and a little experience will soon convince us that if patients go from us to others those of others will come to us for equally weighty reasons. As a working rule I consider that whilst one man should never do anything to induce another's patient to come to him, he is perfectly at liberty to treat that patient if he chooses to come to him, provided the patient has definitely ceased to be under the other man's care and is not known to be in his debt. As the late Sir Charles Ball said to me some years ago when on this subject, 'If a patient wishes to leave me I am always in a much greater hurry to be rid

of him than he of me,' and it is a good rule. It is pleasant when one is on such friendly relations with one's neighbours that though patients may interchange everything will be above-board, and one may with confidence leave his work in another's care knowing that he will not be superseded through any act of the man in charge."

BORDER COUNTIES BRANCH:

DUMFRIES AND GALLOWAY DIVISION.

The annual meeting of the Division was held at the Royal Infirmary, Dumfries, on May 19th. In the absence of the President (Lieutenant A. Chalmers, R.A.M.C.) and the Vice-President (Dr. J. McLachlan) Dr. REID occupied the chair.

Election of Officers.—The office-bearers were re-elected for another year.

Financial Statement.—The financial report was submitted and approved.

Annual Representative Meeting.—The Council's report was then discussed, most of the recommendations receiving the assent of the meeting, and the Representative, Dr. Martin, was instructed accordingly.

Notification of Births.—It was unanimously agreed that a fee of 2s. 6d. should be paid by the local authorities for every notification of birth.

Petrol Supply.—The question of the petrol supply was found to be very acute, and universal complaints as to shortage and actual lack of it were made. The secretary was instructed to write to the M.P. for the county stating the position of the medical men, and the hardships involved through failure of local supplies.

Memorial to the late Dr. Bird.—A letter from Dr. Barnes (Carlisle) was submitted by the SECRETARY, drawing attention to the memorial on behalf of the late Dr. Bird of that city.

The late Dr. Gilroy.—Reference to the death of Dr. J. Gilroy (Waterbeck) was made by the CHAIRMAN, who paid a fitting tribute to his many qualities as a medical man and his usefulness as a member of the Division.

EDINBURGH BRANCH:

SOUTH-EASTERN COUNTIES DIVISION.

The annual meeting of the Division was held at Newton St. Boswells on June 1st, when Dr. J. YOUNG (Earlston), Chairman of the Division, presided.

Treatment of Dependants of Soldiers and Sailors.—The SECRETARY reported that correspondence with officials of the Soldiers' and Sailors' Families Association regarding the indiscriminate distribution of books entitling the holders to free medical attendance showed that the association would not undertake to make inquiries into the circumstances of the recipients, and that the only course open to members of the Division was to give free medical attendance at their own individual discretion to such persons as they considered suitable applicants without regard to the possession by the applicants of the association's books or otherwise.

Election of Officers.—The following officers were elected:

Chairman: Dr. W. T. Barrie (Hawick).

Vice-Chairman: Dr. J. W. Somerville (Galashiels).

Representative to Representative Meeting: Dr. Blair, re-elected.

Deputy Representative: Dr. J. R. Hamilton (Hawick).

Representative to Branch Council: Dr. J. Carlyle Johnstone, re-elected.

Executive Committee: Drs. Fairfax, S. Davidson, J. S. Muir, Dixon, Tyrrell, and Young.

Honorary Secretary and Treasurer: Dr. M. J. Oliver, re-elected.

Vote of Thanks.—Dr. Young, having vacated the chair, was succeeded by Dr. BARRIE, who proposed a vote of thanks to his predecessor for the admirable manner in which he had fulfilled the duties of chairman during the past year. This was cordially endorsed by the meeting and suitably acknowledged by Dr. YOUNG.

Annual Representative Meeting.—The annual report of the Council and the provisional agenda for the Representative Meeting were considered, and it was decided to instruct Dr. Blair to support in general the proposals of the Council, and in particular the measures calculated to relieve conditions due to the shortage of petrol and heavy taxation of cars used for medical practice, and to strongly oppose any reduction in the fees for the notification of infectious diseases.

Reports.—The annual report and financial statement were approved, and the SECRETARY presented a report from the local War Committee, showing the present position of affairs with regard to the calling up of medical practitioners. The Committee was reappointed.

Legislation and Medical Work.—The SECRETARY made a statement with reference to recent legislation and medical work, and expressed the opinion, with regard to the establishment of medical treatment which it was expected would follow the medical inspection of children, that in country districts treatment would best be given by the local practitioners, while the school medical officer should attend to the organization of the work and select the children that required treatment.

GLASGOW AND WEST OF SCOTLAND BRANCH.
The annual general meeting of the Branch was held in the Faculty Hall, Glasgow, on May 31st. In the unavoidable absence of Colonel Mackintosh, Dr. JOHN GOFF occupied the chair. In the course of his remarks the CHAIRMAN made sympathetic reference to the death of Dr. A. T. Campbell of Maryhill, and Dr. W. G. Macpherson, Bothwell. He appealed for increased membership of the Association, and then called upon the President-elect, Dr. W. F. BROWN (Ayr), to take the chair as President of the Branch. In doing so, Dr. BROWN expressed his thanks for the honour done him, and his wishes for a successful year.

Annual Report and Financial Statement.—The annual reports of the Secretary and Treasurer were presented and agreed to.

Election of Officers.—The following officers were elected for the ensuing year:

President: Dr. W. F. BROWN (Ayr).

President-elect: Dr. John Adams.

Honorary Secretary: Dr. William Bryce.

Interim Honorary Secretary and Treasurer: Dr. Wishart Kerr.

Treatment of Dependants of Soldiers and Sailors.—After some discussion with reference to the medical attendance on necessitous dependants of soldiers and sailors it was unanimously resolved, on the motion of Dr. ADAMS, seconded by Dr. JOHN GOFF:

In view of the great reduction in the number of medical men available for general practice, and of the improved financial position of the dependants of soldiers and sailors, this Branch is of opinion that the free attendance on such dependants should be discontinued.

The Secretary was instructed to forward this resolution to the head office, and to the secretaries of the City Divisions.

STIRLING BRANCH.

The annual general meeting of this Branch was held at Stirling on May 25th.

Election of Officers.—The following were elected office-bearers for the ensuing year:

President: Dr. Lumsden (Denny).

Vice-President: Dr. Park (Kilsyth).

Honorary Secretary: Dr. Dyer (Alloa) (on service).

Interim Honorary Secretary: Dr. Yellowlees (Stirling).

Members of Council: Drs. Young (Bonnybridge), Spencer (Grangemouth), Vost (Stirling), and Lawrence (Poinsett).

Medical Referees under the Insurance Act.—The meeting discussed the question of fees for medical referees work under the Insurance Act. It was pointed out that some members had suffered for their loyalty to the recommendation of the Association that no less fee than 10s. 6d. be accepted for such work. The feeling of the meeting was that the whole question should be reopened at the Annual Representative Meeting, as the present position does not reflect the attitude of the bulk of the members.

Treatment of Dependants of Soldiers and Sailors.—In view of the introduction of compulsory service, the meeting resolved that free attendance on dependants of soldiers and sailors be discontinued after the end of June, and that a graduated scale of fees for such attendance be adopted, as is at present the case in the town of Stirling, namely: Where the total family income is 21s. a week or less, a fee of 1s. a visit; between 21s. and 30s., 1s. 6d. a visit; over 30s., 2s. a visit.

NORTH WALES BRANCH:

NORTH CARNARVON AND ANGLESEY DIVISION.

The annual meeting of the Division was held at Bangor on May 26th, when the Chairman-elect, who was home on leave, was introduced.

Election of Officers.—The following officers were elected for 1916-17:

Chairman: Mr. J. H. Morris-Jones (Colwyn Bay).

Vice-Chairman: Dr. Marion E. Mackenzie (Beaumaris).

Honorary Secretary: Dr. J. R. Prytherch (Llangefni).

Representative for Representative Meeting: Dr. E. O. Price (Bangor).

Deputy Representative for Representative Meeting: Dr. J. R. Prytherch (Llangefni).

Representatives on Branch Council: Re-elected.

Executive Committee: Re-elected.

It was decided to protest against the reduction of the fee for notification of infectious diseases, and to urge a plea for uniformity, since the authorities at present issued a set of books for notifying various diseases which were very troublesome.

The model ethical rules were adopted.

The work of keeping record cards of absent colleagues being considered arduous and difficult to perform accurately, it was decided that the Commissioners should be urged to waive their claim in this respect, since in many cases the doctors remaining at home did the work for the sole benefit of their absent colleagues.

The treatment of dependants of soldiers and sailors was said to be abused, as the books appeared to have been distributed indiscriminately. The Secretary was instructed to communicate with all the secretaries of the fund in the areas in the Division asking them to meet the local doctors with a view to revising the list, and not to issue further books except to those cases agreed to by the local practitioners.

DORSET AND WEST HANTS BRANCH:

WEST DORSET DIVISION.

The annual meeting of the West Dorset Division was held on May 30th.

Election of Officers.—The following officers were elected for the year:

Chairman: Dr. P. W. Macdonald (Weymouth).

Vice-Chairman: Dr. Whittingdale (Sherborne).

Honorary Secretary: Dr. Miller (Weymouth).

Representative for Representative Meeting: Surgeon-Lieutenant-Colonel Decimus Curme (Child Okeford).

Representatives on Branch Council: Drs. T. MacCarthy, Marsh, Cosens, Edwards, Macdonald, Curme, and Miller.

Executive Committee: Drs. Luther, Drury, Bartlett, Kitson, Watts-Silvester.

Work for Absent Colleagues.—The meeting recommended the adoption of the suggestions of the Central War Committee in place of those adopted in September, 1914, as being fairer to all concerned.

EAST ANGLIAN BRANCH:

NORTH-EAST ESSEX DIVISION.

The annual meeting of the Division was held at Colchester on May 25th.

Election of Officers.—The following officers were elected:

Chairman: Dr. P. W. Rowland (Colchester).

Vice-Chairman: Dr. W. M. Burgess (Frinton-on-Sea).

Honorary Secretary: Dr. A. N. Fell (St. Mary's, Church Street North, Colchester).

Representative for Representative Meeting: Dr. Agnes Estcourt-Oswald (Colchester).

Representatives on Branch Council: Drs. S. W. Curl and J. H. Salter.

Executive Committee: Drs. Sidney Bree, S. M. D. Campbell, F. B. H. Caudwell, W. F. A. Clowes, P. Coleman, Ben. Hall, J. L. Meynell, C. G. Roberts, H. Whitby, S. E. Worts; and *ex officio*, P. W. Rowland, A. N. Fell, W. M. Burgess, Agnes Estcourt-Oswald.

It was decided not to elect an Ethical Committee.

Annual Representative Meeting.—The provisional agenda for the Annual Representative Meeting (SUPPLEMENT, May 6th) was considered. It was decided to support the motions and recommendations therein, and the Representative was instructed to vote accordingly.

Membership of the Association.—The following motion was carried unanimously:

That in view of the fact that the financial position of medical men was being seriously affected by the rise in the cost of living, and was likely to be further affected in the future by this and by economies of public departments, it was urgent that the membership of the British Medical Association, which is the only body that voices the opinion of the profession and carries weight with the Government and with the public, should be greatly increased.

Vote of Thanks.—A vote of thanks to Dr. Burgess for his services as chairman during the past year was carried *unanimously*.

LANCASHIRE AND CHESHIRE BRANCH:

BURNLEY DIVISION.

THE annual meeting of the Division was held on May 31st, when the following office-bearers and members of committee were duly elected:

Chairman: Dr. J. W. Clegg (Rose Grove).
Vice-Chairman: Dr. A. C. Glashan.
Honorary Secretary and Treasurer: Dr. James Gardner.
Representative for Representative Meeting: Dr. H. J. Robinson.
Representative on Branch Council: Dr. J. M. Ferguson.
Executive Committee: Drs. C. A. Anderson, A. Edward Bird, F. E. Crossley, H. S. Dixon, G. S. Pullon, T. M. Scott (Burnley), J. A. Mackenzie (Padiham), F. H. Flack, A. E. Normington (Nelson), A. W. Eadie (Colne), J. S. Wilson (Brierfield), A. Falconer (Earby).

Local War Committee.—The following were elected a special medical war committee for Burnley:

Drs. C. A. Anderson, A. Edward Bird, F. E. Crossley, James Gardner, H. J. Robinson, T. M. Scott (Burnley), H. C. Alderton (Barnoldswick), A. Findlay (Nelson), C. S. Storrs (Colne), J. A. Mackenzie, (Padiham), with Dr. J. M. Ferguson (Ridge House, Burnley) as honorary secretary.

Tariff Fees.—The local tariff minimum scale of fees was revised, and it was resolved to call a special meeting of the Division to consider the advisability of reopening negotiations with the board of guardians as to the dispute between the district medical officers and the public vaccinators and the guardians.

ST. HELENS DIVISION.

At the annual meeting, May 24th, the following alterations in the officers for the ensuing year were made:

Chairman: Dr. J. Masson (St. Helens).
Vice-Chairman: Dr. G. H. Cooke (St. Helens).
Executive Committee: Dr. Unsworth in place of Dr. Masson become *ex officio* member.

METROPOLITAN COUNTIES BRANCH:

CITY DIVISION.

A MEETING of the Division was held at the Metropolitan Hospital on May 31st, when Dr. LESLIE DURNO, Chairman, presided. The reports of the chairman and treasurer were received and accepted from the chair.

Central Medical War Committee.—On the motion of Dr. EVAN JONES, seconded by Dr. VAUGHAN PRYCE, it was resolved:

That the Representative at the Representative Meeting shall move that the Central War Committee should consist of one in three of general practitioners.

Notification of Pregnancy.—It was resolved:

That the Representative be instructed to oppose notification of pregnancy. Also to try to get a flat rate of 7s. 6d. adopted for referees.

The Interests of the Profession.—On the motion of Dr. VAUGHAN PRYCE, seconded by Dr. EVAN JONES, it was resolved:

That this Division of the British Medical Association views with increasing alarm the neglect of the British Medical Association to take adequate means to protect the interests of the profession.

Dr. GREENWOOD strongly opposed this and declared that the Association had done a great deal.

HAMPSHIRE DIVISION.

THE annual meeting of the Division was held on May 31st, when Dr. COLLINGWOOD ANDREWS, Vice-Chairman, presided. *Annual Representative Meeting.*—It was resolved:

That the Representative at the Representative Meeting be empowered to use his own discretion with regard to the matters referred to the Divisions.

Executive Committee.—Dr. W. L. George was elected a member of the Executive Committee in the place of Dr. A. H. Thompson, resigned. The other members were re-elected.

Vote of Thanks.—A vote of thanks was passed to the Honorary Secretary for his services to the Division for the past year.

Local Medical Panel Committee.—It was decided to support the action of the Local Medical Panel Committee.

Branch Organization.—Dr. C. W. CUNNINGTON gave a short address on certain proposals at present before the Organization Committee of the Branch, which have for their object the increase of the membership of the Branch. The proposal to deliver a series of lectures on one subject of interest to general practitioners during the year by members of the Association skilled in certain branches

of medicine or surgery was warmly welcomed as a suitable stimulus. The suggestion was that such a course of lectures should be free to members and open to non-members on payment of a fee.

Election of Officers.—The following officers were elected for the year:

Chairman: Dr. W. Coode Adams.
Vice-Chairman: Dr. E. C. Andrews.
Honorary Secretary and Treasurer: Dr. L. Barnett.
Representative for Representative Meeting: Dr. C. W. CUNNINGTON.
Representative on Branch Council: Dr. G. E. Shuttleworth.
Executive Committee: Drs. De Souza, Dewar, Lowbury, Pidcock, Shuttleworth, W. L. George.

SOUTHERN BRANCH:

PORTSMOUTH DIVISION.

THE annual meeting of the Portsmouth Division was held in the Medical Library, Southsea, on June 1st, when Mr. C. A. SCOTT RIDOUT, F.R.C.S., presided. The annual report and financial statement were received and adopted.

Election of Officers.—The following officers and Executive Committee were elected for the ensuing year:

Chairman: Mr. C. A. Scott Ridout, F.R.C.S.
Vice-Chairman: Mr. H. S. Thomas.
Secretary and Treasurer: Mr. L. K. H. Hackman.
Clinical Secretary: Dr. E. F. S. Green.
Librarian: Dr. W. Carling.
Representative at Representative Meetings: Dr. D. A. Sheahan (Deputy, Mr. L. K. H. Hackman).
Representatives on Branch Council: Dr. L. Cole-Baker, Messrs. A. B. Wright and C. A. Scott Ridout.
Executive Committee: Drs. W. A. Salmond, George MacGregor, E. B. Bird, H. E. Crawley, C. Lamplough, F. C. H. Muggleton, C. P. Childe, T. A. Mulcahy, J. E. F. Palmer, and B. A. W. Stone. *Ex officio:* Mr. James Green (Central Council) and Mr. J. H. F. Way (Secretary Local Medical and Panel Committee).

Annual Representative Meeting.—The provisional agenda of the Annual Representative Meeting was submitted and the paragraphs were discussed seriatim. The following amendments and resolutions were passed:

Par. 94: That Recommendation B, subparagraph (ii) be amended by the insertion of the word "local" between "of" and "practitioners" (second line).

Par. 107: That the Portsmouth Division expresses its profound dissatisfaction with the action of the Central Executive in allowing a reduction of the fees for the notification of infectious diseases without attempting to secure the combined opposition of the organized profession; and urges the Representative Body to take such steps as will prevent similar ineptitude of the Executive in future.

Par. 118: That in the opinion of this Division the Association's facilities for acquiring information of all bills in Parliament affecting the status and emoluments of the profession are unsatisfactory; and that the Council should take prompt steps to remedy this defect.

Par. 119: Recommendation E, supporting the candidature of Drs. L. Browne, H. A. Latimer, J. A. Macdonald, and T. J. Verrall at the election of Direct Representatives on the General Medical Council was agreed to.

Par. 122: That considering (1) that some 4,000,000 of the healthiest of the insured men have enlisted, (2) that many of the insured women have been occupied at more hazardous employments, and that (3) many of our navy and army will return more or less chronic invalids, it follows that panel practitioners have had their insurance work much increased; and therefore the Representative Body should take action to secure an increase also of the emoluments of panel practitioners.

Par. 135: That the refusal to allow the phrase "Rep. mist." when repeating prescriptions entails much unnecessary work; is irksome and harassing; and this meeting expresses its great dissatisfaction that the Insurance Acts Committee did not strenuously oppose the "New Agreement, 1916."

Par. 146: That this meeting is of opinion that part-time medical referees should be appointed on the recommendation and nomination of the Local Medical and Panel Committees.

That our Representative vote in accordance with the resolutions passed at this meeting, but on other questions be free to exercise his own judgement.

Conference of Secretaries.—Regret was expressed at the abandonment of the conference of secretaries, as such meetings were considered to be practical and very useful.

SOUTH-WESTERN BRANCH:

EXETER DIVISION.

THE annual meeting of the Division was held at the Royal Devon and Exeter Hospital on May 23rd.

Election of Officers.—The following officers were elected:

Chairman: Dr. R. V. Solly (Exeter).
Vice-Chairman: Dr. W. H. Evans (Colyton).

Representative: Mr. Russell Coombe, F.R.C.S. (Exeter).
Honorary Secretary and Treasurer: Dr. R. Eager (Devon County Asylum).
Honorary Secretary and Treasurer pro tem.: Mr. A. C. Roper, F.R.C.S. (Exeter).
Representatives on Branch Council: Dr. G. V. Burd (Okehampton), Dr. G. G. Gidley (Cullompton).
Executive and Ethical Committee: Dr. G. V. Burd, Mr. Russell Coombe, F.R.C.S., Dr. M. Cutcliffe, Dr. W. H. Evans, Dr. G. G. Gidley, Dr. W. Gordon, Dr. G. F. Welsford, Mr. A. C. Roper, F.R.C.S. (Exeter).

Vote of Congratulation.—A resolution was passed congratulating Lieut.-Colonel Ransom Pickard, R.A.M.C. (T.), on the honour of C.M.G., recently conferred on him, in recognition of his services at the front.

Association Notices.

ELECTION OF COUNCIL, SESSION 1916-17.

Notice is hereby given that the following have been duly elected members of the Council for the 1916-17 Session:

BRANCHES IN THE UNITED KINGDOM.

Lieut.-Col. R. A. BOLAM, M.D.: North of England, and North Lancashire and South Westmorland Branches.
 Dr. H. J. CAMPBELL: Yorkshire Branch.
 Lieut.-Col. Sir JAMES BARR, M.D., LL.D., and Mr. T. W. H. GARSTANG: Lancashire and Cheshire Branch.
 Dr. ADAM FULTON: East York and North Lincoln, and Midland Branches.
 Dr. O. R. M. WOOD: Cambridge and Huntingdon, East Anglian, and South Midland Branches.
 Dr. E. NOEL NASON: Birmingham and Staffordshire Branches.
 Mr. H. B. BRACKENBURY, Colonel JAMES GALLOWAY, A.M.S., Dr. MAJOR GREENWOOD, and Dr. F. J. SMITH: Metropolitan Counties Branch.
 Dr. GEORGE PARKER: Bath and Bristol, Gloucestershire, West Somerset, and Worcestershire and Herefordshire Branches.
 Major RUSSELL COOMBE: Dorset and West Hants, South-Western and Wiltshire Branches.
 Mr. JAMES GREEN: Oxford and Reading, and Southern Branches.
 Dr. CLAUDE WILSON: Kent, Surrey, and Sussex Branches.

Scotland.

Dr. JOHN GORDON: Aberdeen, Northern Counties, Dundee, and Perth Branches.
 Dr. JOHN STEVENS: Edinburgh and Fife Branches.
 Dr. JOHN ADAMS: Glasgow and West of Scotland Branch (4 City Divisions).
 Major J. LIVINGSTONE LOUDON: Glasgow and West of Scotland (5 County Divisions), Border Counties, and Stirling Branches.

Ireland.

Dr. WM. DOOLIN: Leinster Branch.
 Dr. JOSEPH GIUSANI: Munster Branch.
 Dr. A. GARDNER ROBB: Ulster Branch.

COLONIAL RETURNS.

Lieutenant-Colonel W. T. HAYWARD, LL.D.: South Australian, Tasmanian, Victorian, and Western Australian Branches.
 Dr. T. DUNCAN GREENLEES: South African, etc., Group of Branches.
 Sir ALLAN PERRY: Ceylon and Indian Branches.
 Dr. FRANCIS WM. CLARK: Hong Kong and China and Malaya Branches.

By Order of the Council,

GUY ELLISTON,

Financial Secretary and Business Manager.

June 24th, 1916.

MEETING OF COUNCIL.

The next meeting of Council will be held on Wednesday, June 28th, in the Council Room, 429, Strand, London, W.C., at 11 a.m.—By order,

GUY ELLISTON,

June 1st, 1916.

Financial Secretary and Business Manager.

ANNUAL REPRESENTATIVE MEETING, 1916.

DATE OF MEETING.

THE Annual Representative Meeting of the Association, 1916, will be held at the Connaught Rooms, Great Queen Street, London, W.C., on Friday, July 28th, 1916, at 10 a.m., and following day(s) as may be required.

RETURNS OF REPRESENTATIVES.

Honorary Secretaries of Divisions who have not yet forwarded to the head office the names and addresses, and dates of election, of the Representatives appointed by their Constituencies for 1916-17, are asked to forward me these particulars by the earliest possible date. Under the By-laws, Representatives must be elected not more than nine months nor less than four weeks before the Annual

Representative Meeting, and their names must be notified to the head office by at latest July 7th. A Representative can, if necessary, be elected and instructed by one and the same meeting of the Constituency. The provisional Agenda of the Annual Representative Meeting, including the Annual Report of Council, was published in the SUPPLEMENT of May 6th, and certain Notices of Motion by Divisions in the SUPPLEMENT of June 3rd. The Supplementary Report of the Council will appear in the SUPPLEMENT of July 1st or 8th.

By order,

ALFRED COX,

Medical Secretary.

June 21st, 1916.

ANNUAL GENERAL MEETING.

NOTICE is hereby given by the Council that the Annual General Meeting of the British Medical Association will be held at the Connaught Rooms, Great Queen Street, London, W.C., on Saturday, July 29th, 1916, at 2 o'clock in the afternoon.

Dated this 24th day of June, 1916.

By order,

GUY ELLISTON,

Financial Secretary and Business Manager.

429, Strand, London, W.C.

BRANCH AND DIVISION MEETINGS TO BE HELD.

DORSET AND WEST HANTS BRANCH.—Mr. Percy A. Ross (Kensington, Boscombe Spa Road) gives notice that the summer meeting of the Branch will be held at Weymouth on Wednesday, July 19th, at 3 p.m.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.—Mr. H. L. Evans (401, Prince's Avenue, Hull) gives notice that the annual meeting of the Division will be held at 12.30 p.m., in the Lloyd Hospital, Bridlington, on Thursday, June 29th. Business: To receive the annual report and financial statement. To elect officers.

KENT BRANCH: ISLE OF THANET DIVISION.—Dr. H. M. Raven, Honorary Secretary (Barfield House, Broadstairs), gives notice that the annual meeting of the Division will be held in the Parish Room, Broadstairs, immediately after the meeting of medical practitioners in Thanet for the election of a new War Committee, called for 8.30 p.m. on June 28th, 1916. Agenda: To elect officers for the year and an executive committee. To receive a report of the work and finances of the Division. To consider the agenda of the Annual Representative Meeting (see SUPPLEMENT, May 6th and May 27th, BRITISH MEDICAL JOURNAL).

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman (Honorary Secretaries) give notice that the annual general meeting of the Branch will be held at 429, Strand, W.C., on Tuesday, June 27th, at 4 p.m. The business will be: (1) Report of scrutineers as to the election of new officers. (2) The annual reports of council and of representatives of the Branch on the Central Council. (3) Alteration of Rule 7 b. (4) The adoption of the revised ethical rules as approved by the Annual Representative Meeting, 1915. (5) President's address: Medical Administration of Modern Armies.

MIDLAND BRANCH.—Dr. Adam Fulton, Acting Honorary Secretary, gives notice that the annual meeting of the Midland Branch will be held at the Royal Infirmary, Derby, on July 6th, at 3 p.m. Business: Annual reports; election of officers; adoption of revised organization rules; discussion on The Dangers of Official Medicine, to be opened by the President, Dr. Cassidi.

NORTH WALES BRANCH.—Dr. J. R. Prytherch, Acting Honorary Secretary (Doldir, Llangefti), gives notice that the annual meeting of the Branch will be held at the University College, Upper Bangor, on Tuesday, June 27th, at 2.30 p.m., when the president-elect will take the chair, the annual report of the Council will be submitted, and officers will be elected. At 3 p.m. a meeting of the profession will be held at the same place, when Sir William Osier will deliver an address on the proposed national medical school for Wales.

SOUTHERN BRANCH.—Mr. James Green, Honorary Secretary (Brandon House, Mile End, Portsmouth), gives notice that the annual meeting of the Branch will be held at the Royal Hampshire County Hospital, Winchester, on Wednesday, July 12th, at 2.30 p.m., Dr. C. F. Routh (Southsea) in the chair. Agenda: Return of election of officers of the Branch for 1916-17; annual report of Council; balance sheet of Branch; balance sheet of Belgian Doctors' and Pharmacists' Fund; general business. At the conclusion of the business Dr. Routh will vacate the chair in favour of Dr. Bodington (Winchester). On account of the war there will be no luncheon or other social function, except that tea will be served at the end of the meeting by the kindness of Dr. Bodington. The golf competition for the Childie challenge cup will take place at the Royal Winchester Golf Links at 3.30. Tea will be served at the golf-house. Members who intend to be present at the meeting will oblige by notifying the Honorary Secretary.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.—Dr. A. E. Larking, Honorary Secretary (Buckingham), gives notice that the annual general meeting of the Buckinghamshire

Division will be held at the Crown Hotel, Aylesbury, on Friday, June 30th, at 4 p.m. Members wishing to bring subjects forward will please inform Secretary at once.

SUSSEX BRANCH.—Dr. A. M. Daldy, Honorary Secretary (14, Palmeira Avenue, Hove), gives notice that the annual meeting of the Sussex Branch will be held at the Grand Hotel, Eastbourne, on Wednesday, July 5th, at 2.30 p.m.

WEST SOMERSET BRANCH.—Dr. W. B. Winckworth, Acting Honorary Secretary (Sussex Lodge, Taunton), gives notice that the seventy-fourth annual meeting of this Branch will be held at the Taunton and Somerset Hospital on Tuesday, June 27th, at 3.30 p.m., when the chair will be taken by the incoming President, Mr. S. G. Graham. Agenda: Annual report and balance sheet, and election of officers; adoption of new ethical rules; discussion on matters referred to Divisions (contained in the *BRITISH MEDICAL JOURNAL SUPPLEMENT* of May 6th); other business. After the meeting those present will be entertained to tea by Mr. S. G. Graham.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—Dr. S. C. Legge gives notice that the annual meeting of the Worcester Division will be held at 2 p.m., and the annual meeting of the Worcestershire and Herefordshire Branch at the Salter's Hall, Droitwich, on Friday, June 30th, at 3 p.m., when the President, Dr. Wilkinson, will deliver an address on The Brine Baths of Droitwich.

INSURANCE.

SCOTLAND.

DOMICILIARY TREATMENT OF TUBERCULOSIS.

The Scottish Insurance Commissioners have issued to insurance committees a circular stating that the Commissioners have been in consultation with the Local Government Board of Scotland with regard to the arrangements for domiciliary treatment of insured persons suffering from tuberculosis in cases in which the committee may have exhausted its sanatorium benefit fund before the end of the year, and also with regard to the provisions of Section 17 of the Insurance Act of 1911. It is pointed out that the panel practitioners provide medical attendance for these cases, even when they have not been recommended for sanatorium benefit, and medicines are also provided from the insurance funds, and the only function of the local health authority in these cases is the provision of medical comforts and other requisites outside the scope of medical benefit. Such a divided authority is so clearly undesirable that the Commissioners suggest that in order that the insurance committees may remain in charge of all insured persons in need of domiciliary treatment, each committee should, at the beginning of each year, set apart out of the sanatorium benefit fund such a sum as may safely be regarded as sufficient to defray the cost of the necessary medicines and medical comforts required for domiciliary treatment during the year. If the sum proves to be more than sufficient, the balance should be handed over to the local authority where, owing to exhaustion of the sanatorium benefit fund, the authority has incurred expenditure in respect of the institutional treatment of insured persons; otherwise the balance to be carried forward to the next year. Insurance committees are urged to give the local authorities timely notice where there appears to be danger that the sanatorium benefit fund will be exhausted, so that the authority may consider what steps to take to deal with the cases.

Accompanying the circular there is a copy of one sent to local authorities by the Local Government Board. The authorities are reminded that it will be necessary for them to provide medical attendance for cases which have not their own private doctor, or are not provided for as insured persons. The Board considers that such attendance should as far as possible be given by the tuberculosis officer or the dispensary staff, but in cases of emergency it may be necessary for the authority to call in the nearest medical practitioner. This, however, is not to be done as a routine practice, and the authority is to exercise the closest control over the expenditure for this purpose, setting apart a fixed sum out of which to remunerate practitioners thus called in. All arrangements proposed for this purpose are to be submitted to the Board. In sparsely populated districts where it might be impossible for the tuberculosis officer or dispensary staff to give personal attendance, the authority might make arrangements with local practitioners who would be paid out of the sum annually set apart for the purpose, but the tuberculosis officer would be expected to keep all such cases under regular supervision,

and to terminate the attendance by the private practitioner whenever that could safely be done.

With regard to insured persons who, on account of the exhaustion of the sanatorium benefit funds may not be recommended for sanatorium benefit, they will receive medical attendance from their panel doctors and such medicines as may be prescribed for them, but the insurance committees cannot supply medical comforts, and where necessary these will have to be supplied by the local authorities. The authorities are therefore notified of the above arrangements suggested by the Commissioners to insurance committees with regard to the setting apart of a sum of money each year for this purpose. Local authorities are required, as a condition of participation in the tuberculosis maintenance grant to maintain the same standard for domiciliary treatment for non-insured persons as those required for insured persons. Special attention is to be paid to preventing the treatment of tuberculosis in overcrowded houses, and where the housing conditions cannot be made immediately suitable, either shelters should be provided or the patients removed to sanatoriums or hospitals, or other institutions. The authorities are further reminded that where the insurance committees cannot or do not for any reason grant or continue sanatorium benefit, either institutional or domiciliary, to insured persons, it is the duty of the local authority to deal properly with the cases. No insured person has a right to sanatorium benefit unless he is specially recommended for it by the insurance committee, and the local authorities have no right to question the decision of an insurance committee in this matter. The Board states definitely that failure on the part of a local authority to deal properly with such cases may involve a refusal to allow participation in the tuberculosis maintenance grant.

TREATMENT OF TUBERCULOSIS IN MIDLOTHIAN.

A report on the administration of sanatorium benefit in Midlothian has been presented to the County Insurance Committee. It deals with the period from the commencement of the Act to December 31st, 1915, and shows that 87 men and 47 women had applied to the Committee for sanatorium benefit. Treatment was given to 75 men and 34 women. A number of the applicants had refused to accept treatment after being recommended for it. Forty-six men and 22 women had received sanatorium treatment; 17 men and 9 women had received both sanatorium and domiciliary treatment; whilst 12 men and 3 women had received domiciliary treatment exclusively in the course of the period. Treatment was given to 12 persons between the ages of 16 and 20, to 55 between the ages of 20 and 30, to 22 between the ages of 30 and 40, to 11 between the ages of 40 and 50, and to 9 over 50 years of age. The occupations of those who received treatment were:

Miners, 20; factory and mill workers, 14; domestic servants and housekeepers, 14; farm workers, 7; pithead workers, labourers, and shopkeepers, 6 each; gardeners, 5; office workers, 4; tailoring, 3; laundry workers, engineers, railwaymen, quarrymen, and nurses, 2 each; blacksmith, fisherman, potter, lithographer, joiner, cooper, oil worker, hallkeeper, postman, 1 each; and 5 soldiers who had been discharged from the army, being recommended by the army authorities to the Committee for a period of institutional treatment.

The clerk reported that every case of tuberculosis was now being followed up.

CORRESPONDENCE.

PAYMENTS UNDER THE INSURANCE ACT FOR YEAR 1914.

Dr. F. W. HOPE ROBSON (Honorary Secretary, Southampton Panel Committee) writes: That Dr. Stevenson's figures on the settlement for 1914, given in his letter in your issue of June 3rd, are open to quite a different interpretation to that which he suggests, the following returns supplied by the Insurance Commissioners to the Southampton Panel Committee will show:

Aggregate count of the Index Registers of Insurance Committees in England, 11,864,641.

Amount available for payment for medical benefit (including drugs and appliances, but not including the 6d. for domiciliary treatment of tuberculosis), £4,239,137 6s. 4d.

Return of Southampton Register, 39,982.

Amount apportioned to Southampton, £14,285 4s. 8d.

11,864,641 insured persons cost £4,239,137 6s. 4d.—that is, 7s. 1½d. a head.

39,982 insured persons cost £14,285 4s. 8d.—that is, 7s. 1½d. a head.

The above figures show that on the counts of the registers supplied by the different Insurance Committees, 7s. 1½d.

was paid, as against 8s. 6d., or a reduction on account of inflation, lapses, deaths, and enlistments, of about one-sixth. Each panel area is credited with the proportion of the gross amount corresponding to the number of insured persons returned by the Insurance Committee of that area (vide Southampton credit). Those areas, therefore, whose returns are inflated, have the advantage; it was for this reason that the Southampton Panel Committee were opposed to the 1914 figures being used as a basis for an emergency settlement for 1915. If the Cambridge doctors generally fare as well as Dr. Stevenson, and unless some other explanation of their good fortune can be supplied, the inference is that the Cambridge doctors, owing to the return of the Cambridge register being largely inflated, received a undue proportion of the gross medical benefit fund.

Dr. A. CAMPBELL (Chairman Gloucestershire Local Medical and Panel Committee) writes: On June 3rd I received a cheque in final settlement for 1914. My index cards were carefully kept and checked by the Insurance Committee. The average number for the four quarters was 620. All but 17 I supplied with drugs; in addition an average number of unassigned persons was added to my list—100 altogether. The total amount due for the 620 indexed cards was £277. The amount due on the unassigned persons was £45—a total of £322. I received in all £262. I may add that I was only paid 1s. 7d. a head for drugs, that no "floating 6d." balance was mentioned, and that the total sum received was £15 under the amount due on my accepted patients, while not a single halfpenny was received for the 100 unassigned "surplus." I have no reason to think that I am in a different case from any other doctor in our county.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following announcements are notified by the Admiralty: Fleet Surgeon G. T. Broatch, M.B., to be Deputy Surgeon-General. Fleet Surgeons F. Bolster to the *Pembroke*; E. T. Meagher to Yarmouth Hospital; R. Miller, M.B., to the *Victory*. Surgeon R. M. Riggall to the *Deaf*, vice Sankey. Surgeon (Emergency) W. J. Stitt to the *Victory*. Temporary Surgeons D. J. Max to the *Cumberland*, vice Buddle; R. Buddle, C. E. Leake, M.B., and A. T. McDonald, M.B., to the *Vivid*.

ROYAL NAVAL VOLUNTEER RESERVE.

Staff Surgeon A. D. Cowburn to the *Vivid*, additional. Surgeon T. D. McEwan to the *Vivid*, additional, for disposal. Surgeon Probationers G. Millar to the *Lance*; F. W. Lemarchant to the *Fortune*; St. G. B. D. Gray to the *Staunch*; J. L. Wilson to the *Express*; J. M. Bickerton to the *Lawford*, vice Byrn; E. R. Pearce to the *Ferret*, vice Fotheringham; E. A. Sparks to the *Lightfoot*; D. C. Clark to the *Lysander*. To be Surgeon Probationers: A. G. Morison, P. Lloyd-Williams, J. Stewart, F. A. Evans, R. E. R. Sanderson, R. F. Boltman, J. K. Steel, J. Paterson, W. M. Anthony, R. MacGarrol, E. J. G. Sargent, M. Brown, P. McMurray, A. H. Shelswell, J. R. Hughes, J. S. Lewis, E. Piggett, S. H. Waddy.

ARMY MEDICAL SERVICE.

Lieutenant-Colonels to be temporary Colonels whilst Assistant Directors of Medical Services of Divisions: T. P. Jones, M.B., H. V. Prynn, F.R.C.S., D. D. Shanahan.

ROYAL ARMY MEDICAL CORPS.

H. G. G. Cook, M.D., to be temporary Lieutenant-Colonel whilst in charge of the Welsh Hospital, Netley (substituted for notification in the *London Gazette* of May 16th).

Temporary Captain R. C. Brown, M.D., relinquishes the rank of temporary Major on ceasing to be employed at the Springburn and Woodside Hospital, Glasgow.

Temporary Captains to be temporary Majors: A. Phillips, E. Black. Temporary Captain C. W. Donald, M.D., F.R.C.S.E., relinquishes his commission.

Temporary Captains relinquishing their commissions on appointment to the I.M.S.: J. H. Grove-White, M.D., U. J. Bourke.

Temporary Lieutenant T. H. T. Frampton, F.R.C.P., to be temporary Major.

To be temporary Captains: B. J. Collingwood, M.D., H. F. Strickland, F.R.C.S., and temporary Lieutenants A. D. Forbes and G. Fleming.

Temporary honorary Lieutenants to be temporary honorary Captains whilst serving with No. 6 British Red Cross (Liverpool Merchants' Mobile) Hospital: H. Browning, H. W. Jones, M.B., F. C. Wilkinson, M.B.

Temporary honorary Lieutenant E. M. Eaton, M.D., to be temporary honorary Captain whilst serving with No. 2 British Red Cross Hospital.

E. A. Bell to be temporary honorary Captain whilst serving with No. 5 British Red Cross Hospital.

Temporary honorary Lieutenants to be temporary Lieutenants: P. A. Dargan, L. M. Davies, L. W. Jones.

To be temporary Lieutenants: J. N. Cruikshank, M.B., A. Davidson, M.B., J. B. Fisher, M.B., M. M. Frew, M.B., T. B. Fulton, M.B., G. Kirkhope, M.B., D. Kennedy, W. N. Montgomery, M.B., W. C. Gore, M.B., R. E. J. St. J. Griffin, J. S. Kinross, M.B., D. W. Smith, M.B., R. G. Russell, E. H. Eastwood, M.B., N. B. Capon, M.B., C. E. Wise, M.D., F. W. Clark, M.B., J. Jaffe, M.B., B. P. McLaren, M.B., O. C. M. Davis, M.B., J. Devine, J. Cross, J. Glaister, M.B., Z. A. Green, H. R. Tighe, F.R.C.S.I., T. W. Bailey, J. Crean, M.B., A. G. L. Smith, J. G.

Forbes, M.D., R. O. Lee, M.B., D. H. A. Galbraith, S. F. Harris, C. R. Reckitt, J. W. Thomas, T. H. Jackson, W. S. King, M.B., T. O. Robson, M.B., A. E. Burroughs, M.D., W. H. T. Jones, J. A. Giles, M.B., E. N. Glover, H. J. C. Gibson, M.B., J. A. Edmond, M.B., E. J. Mannix, M.B., E. Lanzon, M.D., R. B. Bryan, M.B., A. W. C. Lindsay, J. D. W. Beavis, J. F. Penson.

Temporary Lieutenants relinquishing their commissions on appointment to the I.M.S.: H. M. Collins, G. B. Hanna.

To be temporary honorary Lieutenants: F. C. Ormerod, A. G. Morris, D. G. C. Tasker, S. Hutchinson, A. J. Bade.

Temporary Lieutenant W. H. Harris, M.B., is dismissed the service by sentence of a general court-martial.

The notification regarding temporary Lieutenant J. Campbell, M.B., in the *London Gazette* of May 25th, is cancelled.

The name of temporary honorary Lieutenant N. N. Haysom is as now described, and not as in the *London Gazette* of May 25th.

Temporary Lieutenants relinquish their commissions: R. Moore, M.D., D. Stewart, M.D., A. Turnbull, M.B., B. Fryer, P. W. L. Camps, M.B., F.R.C.S., F. W. Woods, J. M. Logie, M.B., E. R. D. Macdonochie, M.B., F.R.C.S.E., A. F. Horn, M.B., C. E. Dashwood, A. H. MacKenzie, M.B., G. B. Bartlett, D. Fisher, M.B., J. B. H. Davson, E. J. G. Jones, M.D., C. H. Martin, M.B., C. F. Fridham, R. M. Chance, M.D., W. S. Hawthorne, M.B., R. A. G. Whiting, F. Slater, M.B., E. M. McKay, M.B., T. A. Fuller, M.B., A. J. Campbell, M.D., J. S. H. Lewis, M.B., P. E. Middleton, W. E. Burrows, M.D., J.
